

A30 Chiverton to Carland Cross Improvement scheme

The environmental impact

Understanding the impact on the environment and community within the A30 corridor between Chiverton and Carland Cross is very important to us. Our aim is to minimise any adverse effects, while capturing the wider opportunities for improvement created by this scheme.

We have identified environmental constraints and used this information to help us develop the scheme proposals.

Work is underway to collect further environmental information which will help us to select a preferred route and plan how we can mitigate impacts on the environment. This could include planting, habitat creation and species protection.
