

## Appendix 5.2

### Summary of matters raised by section 42(1)(a) prescribed consultees and section 42(1)(b) local authorities in response to the 2021 statutory consultation and National Highways response

**Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response**

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
1	Blackdown Hills AONB	<b>Legislative and policy context - principle of development</b> The principle of upgrading the A358 as part of a broader strategy to create a high-quality dual carriage way link between London and the south west is welcomed. It offers a suitable alternative to the A30/303 west of Ilminster, which should reduce long distance traffic through the AONB.	National Highways welcome support for the principle of the scheme from the Blackdown Hills Area of Outstanding Natural Beauty (AONB).	N/A
2	Blackdown Hills AONB	<b>Legislative and policy context - NPSNN</b> This route choice is also compatible with the National Policy Statement for National Networks (NPSNN) which states (Paragraph 5.152) that: 'There is a strong presumption against any significant road widening or the building of new roads and strategic rail freight interchanges in a National Park, the Broads and Areas of Outstanding Natural Beauty, unless it can be shown there are compelling reasons for the new or enhanced capacity and with any benefits outweighing the costs very significantly. Planning of the Strategic Road Network should encourage routes that avoid National Parks, the Broads and Areas of Outstanding Natural Beauty.' Furthermore, the NPS goes on to state in Paragraph 5.154, 'The duty to have regard to the purposes of nationally designated areas also applies when considering applications for projects outside the boundaries of these areas which may have impacts within them. The aim should be to avoid compromising the purposes of designation and such projects should be designed sensitively given the various siting, operational, and other relevant constraints'.	National Highways welcome support for the scheme and acknowledgement from Blackdown Hills AONB of the scheme's compliance with the National Policy Statement for National Networks (NPSNN).	N/A
3	Blackdown Hills AONB	<b>Legislative and policy context - AONB</b> The statutory purpose of Areas of Outstanding Natural Beauty (AONBs) is to conserve and enhance their natural beauty. The Countryside and Rights of Way Act 2000 places a duty on relevant bodies to have regard to this purpose in exercising their functions and duties. We therefore welcome the fact that the scheme documentation recognises the proximity to the AONB, generally within 2 to 4 km, and that the potential effects on the AONB require consideration.		N/A
4	Blackdown Hills AONB	<b>Legislative and policy context - Blackdown Hills AONB Management Plan</b> The Blackdown Hills AONB Management Plan (currently 2019-24) is the agreed policy framework for conserving and enhancing the AONB and seeks to ensure that all development affecting the AONB is of the highest quality. Additionally the AONB Management Plan provides a valuable reference for guiding development in, or affecting, the AONB, including describing the designated landscape's special qualities. The Management Plan notes, in the landscape character chapter, that: 'The setting of an AONB is the surroundings in which the influence of the area is experienced. If the quality of the setting declines, then the appreciation and enjoyment of the AONB diminish. Large scale development, the construction of high or expansive structures, or a change generating movement, noise, intrusion from artificial lighting, or other disturbance will affect the setting. Views are one element of setting, associated with the visual experience and aesthetic appreciation. Views are particularly important to the AONB. This is because of the juxtaposition of high and low ground and the fact that recreational users value them. Without husbandry and management, views within, across, from and to the AONB may be lost or degraded.' The Plan contains the following objectives and policies considered to be of particular relevance to this scheme, and therefore worthy of consideration in terms of demonstrating regard to conserving and enhancing natural beauty:	National Highways acknowledges the AONB Management plan referenced by Blackdown Hills AONB. National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow, and woodland habitat creation. These areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible, habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358. Protected species and habitat specific mitigation strategies have been developed and are included within the Environmental Statement (ES) Chapter 8 Biodiversity appendices submitted as part of the DCO application (Document Reference 6.4, Appendices 8.24 – 8.35). Assessment against the relevant policies is demonstrated in ES Chapter 7 Landscape and visual effects (Document Reference 6.2) and the Case for the Scheme (Document Reference 7.1).  National Highways acknowledges the Blackdown Hills AONB Management Plan and has taken the impact on the visual experience into consideration. Assessment against relevant policies is set out in ES Chapter 7 Landscape and visual effects (Document Reference 6.2) and Chapter 6 of the Case for the Scheme (Document Reference 7.1).	N/A
5	Blackdown Hills AONB	<b>Blackdown Hills AONB Management plan - Landscape Character Policies</b> Objective LC To ensure that the distinctive character and qualities of the Blackdown Hills landscape are understood, conserved, enhanced and restored Policy LC3 Promote high levels of peace and tranquillity with dark night skies by minimising noise, intrusive development and light pollution Policy LC5 The character of skylines and open views into, within and out of the AONB will be protected Policy LC6 The deeply rural setting of much of the land adjoining the AONB boundary forms an essential setting for the AONB and care will be taken to maintain its quality and character		N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
6	Blackdown Hills AONB	<b>Blackdown Hills AONB Management plan - Biodiversity Policies</b> Objective BG To conserve geodiversity and ensure effective conservation, enhancement, expansion and connectivity of habitats, forming coherent and resilient ecological networks across the Blackdown Hills and beyond, facilitating the movement of priority species across the landscape Policy BG2 Connect habitats at a landscape scale and ensure permeability for species movement within coherent and resilient ecological networks Policy BG3 Priority species (including Section 41, Devon Special Species, Protected Species) will be conserved. Targeted action will be taken to support the recovery of priority species		N/A
7	Blackdown Hills AONB	<b>Blackdown Hills AONB Management plan - Access and enjoyment</b> Objective AE To ensure that opportunities to explore and enjoy the Blackdown Hills countryside and special qualities are compatible with conserving and enhancing natural beauty AE2 Opportunities will be sought to extend and improve the rights of way network, including improving connections with surrounding settlements where this is compatible with conserving and enhancing natural beauty		N/A
8	Blackdown Hills AONB	<b>Blackdown Hills AONB Management plan - Planning and development</b> Objective PD To conserve and enhance the natural beauty of the Blackdown Hills by ensuring that all development affecting the AONB is of the highest quality, sensitive to landscape setting and conserves its wildlife, historic character and other special qualities Policy PD2 All necessary development affecting the AONB will conserve and enhance natural beauty and special qualities by: • Respecting landscape character, settlement patterns and local character of the built environment, • Being sensitively sited and of appropriate scale, • Reinforcing local distinctiveness, and • Seeking to protect and enhance natural features and biodiversity		N/A
9	Blackdown Hills AONB	<b>Blackdown Hills AONB Management plan - Transport and highways</b> Objective TH To ensure that the impact on the landscape, environment and enjoyment of the AONB is considered in the planning, provision and management of transport networks and services Policy TH1 Road and transport schemes (including design, maintenance, signage, landscaping and safety measures) affecting the AONB will be undertaken in a manner that is sensitive and appropriate to landscape character, having regard to the purpose of AONB designation and conserving and enhancing the area's special qualities. The landscape and cultural features of the AONB's road network (including hedge banks, flower-rich verges, and locally distinctive historic highway furniture) will be protected and conserved		N/A
10	Blackdown Hills AONB	<b>PEI Report - Chapter 7 Landscape</b> We agree that there is a fair representation of the AONB in the chosen viewpoints and agree that at least one of these (Staple Hill) is chosen for visualisations. We support the landscape objectives listed in 7.8.3 and trust that these will remain central to the scheme design going forward. However, we would note that in respect of the AONB conserving and enhancing natural beauty is not just the character of the landscape or visual impacts, but should also consider tranquillity, thus noise and lighting are relevant matters too. We therefore support the fact that the scheme will generally not be lit, notably Mattocks Tree Green and Ashill junctions, and this should be the case for both the dual carriageway and affected roads within the control of the local highway authority. Traffic noise from the existing A358 can be heard several miles away now, and this can only be increased by the new road carrying more and faster traffic. We therefore support the use of low noise surfacing along the entire length.	National Highways acknowledges Blackdown Hills AONB support of the landscape objectives and visualisations. Noise impacts and essential mitigation related to the scheme are set out in ES Chapter 11 Noise and vibration (Document Reference 6.2). Embedded mitigation is detailed within ES Chapter 2 The project (Document Reference 6.2).	N/A
11	Blackdown Hills AONB	<b>PEI Report - Chapter 8 Biodiversity</b> Chapter 8 highlights the protected and notable species found along the route. Many of these, such as dormice, butterflies and bats, have population strongholds in the AONB and have been identified as nature recovery species champions for the AONB. As such there is much potential to ensure that mitigation and enhancement measures for landscape also contribute to strengthening ecological networks and	National Highways welcomes the comments and accompanying map provided by Blackdown Hills Area of Outstanding Natural Beauty (AONB) and have taken the map provided into account in assessing ecological opportunities. The environmental mitigation measures included as part of the scheme considered opportunities for hedgerow and woodland enhancement away from, as well as along, the A358 where there is justifiable landscape, visual, or ecological reason to do so to mitigate impacts of the scheme. Where	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<p>wildlife corridors to ensure good connectivity.</p> <p>Attached to this response is a map pertinent to habitat connectivity and nature recovery opportunities in the area between the Quantock Hills and Blackdown Hills AONBs and the proposed dualling scheme on the A358.</p> <p>It shows Ecological Networks, developed by Somerset Wildlife Trust and Somerset Environmental Records Centre, highlighting areas of: core (clusters of suitable habitat over a size threshold); dispersal (areas adjacent to core patches that would be suitable for the habitat to expand into) and stepping stones (habitat patches too small for core, but important in improving connectivity) across four ecologically important broad habitat types.</p> <p>Secondly it shows the B-Lines layer, developed by BugLife, which indicates connectivity opportunities between wildflower rich habitats, specifically focussed on pollinators. Thirdly are selected priority landcover types (e.g. coastal and floodplain grazing marsh), which will be important in the development of nature recovery networks and associated strategies.</p> <p>This indicates the enormous potential of the central part of the route in particular for ecological and landscape connectivity and the risk of the new road being a barrier and severing those connections.</p> <p>We would advocate an approach that responds to local landscape character along the route, such that planting is not confined to the highway estate, or to screen the road, cutting through the landscape, but instead may fit within the wider landscape, retaining typical field patterns and boundaries and enhancing habitats and features.</p>	<p>possible, habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358. Protected species and habitat specific mitigation strategies have been developed and are included within the ES Chapter 8 Biodiversity appendices submitted as part of the Development Consent Order (DCO) application (Document Reference 6.4, Appendices 8.24 – 8.35).</p>	
12	Blackdown Hills AONB	<p><b>Ecological opportunities map</b></p> <p>[Note the Blackdown Hills AONB response includes a map showing ecological opportunities in the Blackdown Hills AONB and A358 area]</p>		N/A
13	Blackdown Hills AONB	<p><b>PEI Report – Chapter 12 Population and Health</b></p> <p>The Neroche Herepath is a 13.5 mile circular multi-user route, using a combination of bridleways, permissive paths and minor roads partly in the northeastern part of the AONB and extending to Bickenhall (it appears to be very close to the scheme boundary). We suggest therefore that the Herepath should be specifically referenced in parts of the report, such as 12.9.50 and 12.9.55 and table 12.24.</p> <p>From discussions locally, and through liaison with Somerset Council Rights of Way, we would recommend that cross route connections for local traffic and walking, cycling and horse riding in the Hatch Beauchamp/Bickenhall area merits further discussion with relevant stakeholders.</p>	<p>Assessment of effects on the Neroche Herepath have been included within ES Chapter 12 Population and human health (Document Reference 6.2). The Herepath would continue to be accessible via Bickenhall Lane. Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only. The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for walkers, cyclists and horse-riders.</p> <p>Bridleway T 14/8 would be diverted to connect with Bickenhall Lane, and users would be able to access the Herepath using the bridleway and the lane. Access to the Herepath where it is near to the scheme should be easier and more pleasant due to new paths and less road traffic. The Herepath would also benefit from hedgerow improvements. The existing headroom would be retained through Fivehead River underpass, and the scheme would not affect the status of the connecting rights of way.</p> <p>The proposed improvements are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by ES Appendix 2.1 Annex F Public Rights of Way (PRoW) Management Plan (Document Reference 6.4).</p> <p>National Highways have engaged with the Blackdown Hills AONB in relation to the development of the scheme design, including for mitigation opportunities.</p>	Yes
14	Blackdown Hills AONB	<p><b>In Summary</b></p> <p>The scheme is welcomed insofar as it should reduce the amount of traffic travelling on the A303/30 through the AONB. This however will be dependent on management at Southfields roundabout. It is not clear to see how west bound traffic will be encouraged and facilitated to readily take the 4th exit onto the A358 rather than go straight ahead, staying on the A303. Equally the roundabout must also safely provide for local traffic travelling to and from Ilminster and Chard and existing congestion at the roundabout should be addressed.</p>	<p>The scheme will include improvements to Southfields roundabout that will provide additional capacity for turning movements from the A303 Ilminster Bypass to the 4th exit onto the A358 dual carriageway. The approach from Ilminster Bypass will be widened from two to three lanes. In the existing layout only one lane of the two lane approach can be used for the turning movement to the A358 towards Taunton. With this scheme two lanes of the three lane approach will be available for the turning movement to the A358 dual carriageway towards Taunton. The roundabout will include spiral markings on the circulatory carriageway that will assist drivers in safely navigating the roundabout.</p>	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			National Highways has undertaken an operational assessment of the improved layout at Southfields roundabout, and this demonstrates that all approaches to the roundabout will operate within their practical capacity. This operational assessment is set out in the Combined Modelling and Appraisal Report (ComMA Report) (Document Reference 7.4).	
15	Blackdown Hills AONB	<b>General - Summary</b> Securing and enhancing connectivity across and along the road corridor is seen as critical in terms of the AONB's landscape, biodiversity and opportunities for enjoyment. In this regard we would be pleased to have ongoing involvement in the further progress of the scheme, particularly in respect of potential off-site mitigation and enhancement opportunities.	National Highways have engaged with the Blackdown Hills AONB in relation to the development of the scheme design, including for mitigation opportunities.	Yes
16	Forestry Commission	My responses only concern woodland and express no opinion about the proposal in general.	National Highways acknowledges this comment.	N/A
17	Forestry Commission	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road?  <b>Woodland</b> The plan area here includes several areas of woodland. I am pleased that the only ancient woodland in proximity to the plan is kept outside of the Proposed Scheme Boundary and I would strongly recommend that any future changes retain this protection for what is an Irreplaceable Habitat under the NPPF. Where woodland that is not ancient is to be impacted we would like to see the proposals deliver compensatory tree planting to ensure that there is no net loss of woodland as a result of the scheme. This could be delivered by new woodland creation to replace any woodland that is felled - it would be beneficial for new woodland planted in this way to be located near existing retained woodland to expand that habitat making larger more connected woodland across the landscape.	The scheme alignment has been designed to avoid this woodland and other ancient woodlands across the scheme. Bickenhall Lane overbridge has been relocated approximately 165m south of the ancient woodland to avoid direct impacts upon the ancient woodland. Following discussion with Natural England an access track off the Bickenhall Lane overbridge has been designed to avoid significant impacts upon the ancient woodland, details of which are provided within the Environmental Statement (ES) (Document Reference 6.2). Other areas of existing woodland have been retained or protected where possible or minimised through design. Where these woodlands are located adjacent to construction areas, appropriate buffers would be established (including a 15m buffer between area of works and woodland edge) and fencing utilised to maintain root protection zones as detailed within ES Appendix 7.3 Tree survey and Arboricultural Impact Assessment(Document Reference 6.4).  The ES details the potential for nitrogen deposition related degradation within Bickenhall Wood; measures to compensate for any degradation include additional woodland planting to the north and south of this woodland and the introduction of management for biodiversity within areas previously inaccessible for Forestry England to manage.	Yes
18	Forestry Commission	Comments on the information presented in the Preliminary Environmental Information (PEI) Report  <b>Biodiversity – woodland</b> I am very pleased to see reference to the Forestry Commission Standing Advice on Ancient Woodland and that this has been considered within the PEI with a 15m buffer zone as standard. It is very positive that smaller woodlands that were not picked up by the lower threshold of the Ancient Woodland Inventory have been included and will be considered as ancient for the purposes of the proposal. The wording of 8.8.23 to 8.8.30 is positive and picks up the value of the existing woodland and the need to replace with mixed climate-resilient woodland that buffers ancient woodland. The figures for woodland creation (42.8ha as stated in 8.9.30) resulting from the mitigation is hugely positive and locating this where the woodland species are already present will make the biggest contribution long term to the landscape. I note that 8.9.27 considered only the dust and water quality during construction is considered as an impact on the ancient woodland. It would be necessary to consider the impacts of the road once in use if an increase in traffic flows are anticipated as a result of the work. It is disappointing that the scheme cannot be designed to protect the Veteran trees identified as these are irreplaceable under the NPPF. The Forestry Commission is available to help the developers ensure that new woodland planting is well sited and well-designed. We would also welcome further consultation regarding the mitigation of impacts on the ancient woodland and Veteran Trees.	The Habitat Mitigation Strategy, ES Appendix 8.24 (Document Reference 6.4) provides details on the unavoidable loss of two veteran trees at the eastern end of the scheme and measures proposed to compensate for this loss. These measures include the safeguarding of other veteran trees, for example through the installation of fencing to avoid poaching by livestock, in proximity to the scheme as well as reducing competition around mature and over-mature trees that comprise future veteran resource across the local landscape.  Further measures proposed include the selective veteranisation of existing semi-mature trees, which would be undertaken in collaboration with experienced arboriculturalists, and would be utilised in situations such as Jordan's Park and Bickenhall Wood to try and ensure a continuation of the communities of flora and fauna that rely on the unique conditions created by the decay features associated with veteran trees.	Yes
19	Historic England	<b>General - Intro</b> Thank you for consulting Historic England on the proposed dualling of the A358 between Taunton to Southfields. This latest proposal is part of a programme of improvements planned along the A303/A358 corridor aimed at improving connectivity. The proposed scheme would provide 8.5 miles (13.6km) of new, rural dual carriageway for the A358. The new dual carriageway would connect Junction 25 of the M5 at Taunton with the existing A303 at Southfields roundabout near Ilminster and would be completed in line with current trunk road design standards. The section west of the proposed Mattock's Tree Green junction would be offline to	National Highways acknowledges the response provided by Historic England at statutory consultation.	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		the existing road corridor, while the section east of the junction would use the existing corridor.		
20	Historic England	<p><b>General - Summary</b> Historic England does not consider that sufficient information has been submitted to provide a clear understanding of the nature and full extent of the potential impacts on the historic environment as required either by the EIA regulations, National Planning Statements or the National Planning Policy Framework. Ahead of the submission of the Environmental Statement (ES), in support of the Development Consent Order (DCO) application, we will work with National Highways to ensure the ES does provide sufficient information.</p> <p>We have set out our advice below regarding the additional information which we consider it will be essential for you to supply to enable the Examining Authority to come to an informed view of the project.</p> <p>Notwithstanding this need for further information, it is already evident to us that the proposed development has the potential to have a significant environmental impact in EIA terms on the historic environment and that it could have a considerable impact on a number of designated heritage assets of national importance.</p> <p>In our view proportional and refined information is necessary to address these substantial impacts upon designated heritage assets in their shared landscape setting. The level of carefully considered information that in our view is required is proportional to the severity of the issues we have identified in relation to the proposed scheme, and directly related to the need to assess the overall sustainability of the development.</p>	<p>National Highways acknowledge the comments provided by Historic England regarding the PEI Report and the level of detail provided at statutory consultation. The further information requested by Historic England has now been provided within ES Chapter 6 Cultural heritage (Document Reference 6.2) and its associated appendices (Document Reference 6.4).</p> <p>National Highways has continued to engage with Historic England through the development of the ES (Document Reference 6.2) and has considered all specific responses provided at statutory consultation and at supplementary consultation; further detail is provided against the relevant points below. See Appendix C of the Statement of Commonality for more details (Document Reference 7.3).</p>	N/A
21	Historic England	<p><b>Historic England Advice</b> At the Preliminary Environmental Information Report (PEIR) stage our advice focuses upon how the draft environmental statement (ES) approaches the possible effects of development on the historic environment, particularly designated heritage assets. We will provide you with advice on whether the draft ES provides all the information reasonably required to both assess the environmental effects of the development under the Environmental Impact Assessment (EIA) regulations and enable the consultees and ultimately the Examining Authority to develop an informed view of the project.</p> <p>Our main focus in this letter is the level and content of the information submitted together with the methodology of assessment for designated heritage assets. In respect of the assessment of non-designated archaeological remains, we recommend that these should be addressed in further consultation with local government archaeological advisors.</p> <p>There are a number of current deficiencies in the submitted information which we aim to highlight below; however, there are some specific impacts to individual assets that we wish to identify at this stage so they can be addressed at an early stage.</p>	<p>National Highways acknowledges the comments provided by Historic England in relation to the scope of their review provided at statutory consultation stage. National Highways have considered all specific responses provided by Historic England in response to statutory and supplementary consultations.</p> <p>The further information requested by Historic England has now been provided within ES Chapter 6 Cultural heritage (Document Reference 6.2) and its associated appendices (Document Reference 6.4).</p>	N/A
22	Historic England	<p><b>General Advice</b> In general terms, Historic England advises that a number of considerations will need to be taken into account when proposals of this nature are being assessed. This includes consideration of the impact of associated development, including new junctions and works to the surrounding road network regarding realignment, reconfiguration and new feature like bridges:</p> <ul style="list-style-type: none"> <li>• The potential impact upon the landscape, especially if a site falls within an area of historic landscape;</li> <li>• Direct impacts on historic/archaeological fabric (buildings, sites or areas), whether statutorily protected or not. All grades of listed buildings should be identified;</li> <li>• Other impacts, particularly the setting of listed buildings, scheduled monuments, registered parks and gardens, conservation areas etc, including long views and any specific designed views and vistas within historic designed landscapes. In some cases, intervisibility between historic sites may be a significant issue;</li> <li>• The potential for buried archaeological remains;</li> </ul>	<p>National Highways acknowledges this comment. All the considerations requested by Historic England have been incorporated into the ES. Impacts on the historic landscape are detailed in ES Appendix 6.2 Historic Landscape Characterisation (Document Reference 6.4). Impacts on designated and non-designated heritage resources, both direct and resulting from a change to their setting, are included in ES Chapter 6 Cultural heritage (Document Reference 6.2) and ES Appendix 6.4 Impact Assessment Tables (Document Reference 6.4). Discussion of archaeological potential is included in ES Chapter 6 Cultural heritage (Document Reference 6.2) and ES Appendix 6.1 Archaeological and Historical Background, Appendix 6.5 Geophysical Survey Report and Appendix 6.6 Archaeological Trial Trenching Report (Document Reference 6.4). Effects on landscape amenity are included in ES Chapter 7 Landscape and visual effects, and cumulative impacts are included in ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2).</p>	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<ul style="list-style-type: none"> <li>• Effects on landscape amenity from public and private land;</li> <li>• Cumulative impacts</li> </ul> <p>In Historic England's view, the draft ES does not adequately address all of the above considerations.</p>		
23	Historic England	<p><b>Heritage Assets</b> The proposed scheme has the potential to impact a number of designated and non-designated heritage assets across a wide area. The PEIR identified for assessment 2 scheduled monuments, 194 listed buildings including 6 grade 1, 10 grade II* and 178 Grade II. There is also a registered park and garden as well as several conservation areas along with numerous non-designated heritage assets. Of particular concern to Historic England at this stage are:</p> <ul style="list-style-type: none"> <li>• Musgrave Farmhouse, Grade II* (National Heritage List for England No. 1177045);</li> <li>• Henlade House, Grade II* (National Heritage List for England No 1060397);</li> <li>• Church of St Aldhelm and St Eadburgha, Grade I (National Heritage List for England No. 1248192) and the scheduled cross in its churchyard (SM 32155; National Heritage List for England No 1017250);</li> <li>• Hatch Beauchamp complex associated with the grade I listed Hatch Court (National Heritage List for England No 1060405) and the grade II Registered Park and Garden (National Heritage List for England No 1001146);</li> <li>• Rowlands Farm and Mill, both listed at grade II*( National Heritage List for England No 1057097 and 1345847);</li> <li>• Jordan's Grotto listed at grade II* (National Heritage List for England No 1057070</li> <li>• Church of the Blessed Virgin Mary, Ashill (National Heritage List for England No 1057100) and the Church of the Holy Cross, Thornfalcon (National Heritage List for England No 1177251)</li> <li>• Further afield is Castle Neroche a scheduled monument of national importance (SM 24006; National Heritage List No 1008252).</li> </ul> <p>The potential impact on grade II listed buildings, as well as non-designated heritage assets including below ground archaeological remains will be dealt with by the local planning authorities' conservation officers and archaeological advisors. Further advice should be sought from the council's specialists on the historic environment.</p>	National Highways acknowledges the list provided by Historic England, all of which are assessed within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
24	Historic England	<p><b>Significance of heritage assets</b> The assets below are those (as listed above) regarding which Historic England is particularly concerned regarding the scheme at present. You should ensure that the ES contains a full assessment of significance for all these assets. Particular focus should be given to the significance they derive from that part of their settings through which the proposed route of the A358 would run. As presently submitted Historic England does not consider the descriptions of significance would form a sufficient foundation on which to base a decision regarding the scheme.</p>	National Highways has engaged with Historic England to determine what additional information is required and this has been incorporated into ES Chapter 6 Cultural heritage and its supporting appendices (Document References 6.2 and 6.4). All the heritage resources highlighted by Historic England, as well as all designated resources within 1km of the scheme boundary or beyond this but potentially impacted by changing noise or setting, have been assessed.	N/A
25	Historic England	<p><b>Significance of heritage assets - Musgrave Farmhouse</b> Musgrave Farmhouse is a medieval three-room cross passage domestic property. The house's surviving fabric clearly demonstrates the phased adaption of the property during the medieval and post medieval period. Due to its more than special architectural and historic interest the building is listed at grade II*.</p> <p>The land associated with the house is enclosed by a historic stone boundary wall with an associated farmstead to the north. It has a clear functional relationship with the surrounding agricultural land due to its former role as a farm. This rural setting is emphasised by the scale of the surrounding roads including the adjacent Stoke Road. Its surroundings are an intrinsic element of the experience of the house and contribute positively to the significance the site derives from its setting.</p>	National Highways agrees with the assessment of significance of this heritage resource. The ES contains additional assessment in relation to Musgrave Farmhouse in ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
26	Historic England	<p><b>Significance of heritage assets - The Grotto at Jordans</b> The grotto is a small summerhouse designed in the picturesque gothic revival style, which is located within the non-designated former park associated to the now lost Jordans House. The landscape is an integral element of its significance as a feature that is enjoyed as part of the experience of the site. Due to its more than special architectural and historic interest the building is listed at grade II*.</p>	National Highways is in agreement with the assessment of significance of this heritage resource, and it is reflected in the discussion of the Jordans Park group contained within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
27	Historic England	<p><b>Significance of heritage assets - Hatch Court including St John the Baptist Church and the registered park and garden</b> Hatch Court is a complex site including both designated and non-designated heritage assets. The assets hold significance in their own right but also as a complex and cohesive group.</p> <p>Hatch Court is a Palladian style Country Mansion built by Thomas Prowse for John Collins Junior in 1755. Immediately north is the courtyard stable block, a 1820 replacement of an earlier block, contemporary with the mansion. Beyond that is the Church of St John the Baptist, whose Norman origins act as a reminder that a manor was established on this site following the conquest and has been in continuous occupation since. The house and church are due to their exceptional special interest have been listed at grade I and form the top 2.5% of all listed buildings in England. The stable block is also listed at grade II.</p> <p>This highly designated complex of buildings is located at the centre of a designed mid 18th century pleasure ground and parkland which occupies elevated land above the village. Made up of formal planting, open parkland and densely wooded areas, the space was enjoyed through the experience of numerous walks and views. Views were carefully managed within the landscape and out to borrowed views of the surrounding countryside, using tree belt planting to screen historically undesirable elements within their setting, much as the village. The landscape is recognised as being of historic interest in its own right and registered at grade II. However, it is also an integral component in the experience of the house and therefore also contributes to the significance the grade I listed building derives from its setting.</p>	National Highways is in agreement with the assessment of significance of this heritage resource, and it is reflected in the discussion of the Hatch Court group contained within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
28	Historic England	<p><b>Significance of heritage assets - Church of the Blessed Mary, Ashill and Church of the Holy Cross, Thornfalcon</b> Both churches retain significant medieval fabric and notably a tower that forms a distinctive landmark. Visible in longer ranged view, these towers act as spiritual reference points within the landscape reinforcing their significance within their wider setting. Due to its more than special architectural and historic interest the Church of the Blessed Mary is listed at grade II*, and the Church of the Holy Cross at grade I due to its exceptional interest.</p>	National Highways is in agreement with the assessment of significance of this heritage resource, and it is reflected in the discussion of the Church of the Blessed Mary and the Church of the Holy Cross contained within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
29	Historic England	<p><b>Significance of heritage assets - Church of St Aldhelm and St Eadburgha and the scheduled cross in its churchyard</b> The Church of St Aldhelm and St Eadburgha retains a high survival of medieval fabric within its construction including its late 13th/ early 14th chancel roof. Due to its exceptional special interest the building has been listed at grade I.</p> <p>A scheduled cross stands in the churchyard, also listed at grade II*. Its ecclesiastical purpose is closely associated with the role of the church, as part of processions, an external preaching platform as well as a recognisable landmark. This relationship with the church is a key factor contributing to its significance.</p> <p>The church is positioned some distance from the modern-day development of Broadway village. This isolated position is attributed to the existence of a Deserted Medieval Village (DMV) around the site as a result of a 17th century plague as described in the description of the Church in the National Heritage List for England. Therefore, its agricultural setting, the sense of detachment and experience of isolation all play a part in our understanding of the development of the Church, its surrounding landscape and the experience of the place. Consequently, these elements contribute to the significance the church derives from its setting.</p>	National Highways is in agreement with the assessment of significance of this heritage resource, and it is reflected in the discussion of the Church of St Aldhelm and St Eadburgha group contained within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
30	Historic England	<p><b>Significance of heritage assets - Rowlands Farm and Mill</b> Rowlands Farm is a late 15th/ early 16th farmhouse situated in an elevated isolated location. It forms a group with Rowlands Mill, a 17th century water mill which is powered by artificial leats. Due to their more than special interest they have been listed at grade II*.</p> <p>Surrounded by agricultural land with associated water courses, the complex retains</p>	National Highways is in agreement with the assessment of significance of this heritage resource, and it is reflected in the discussion of Rowlands Mill and Farm contained within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		a clear link between the role of the buildings and their setting, contributing to their significance.		
31	Historic England	<p><b>Significance of heritage assets - Henlade House</b> Built in 1805 - 15, Henlade House, also known as Mount Somerset Hotel, was built in an Italianate design by an unknown Italian architect. Its interior is recognised as being part of the aesthetic movement, a forerunner to the 20th century Arts and Crafts movement. The house has been listed at grade II* due to its more than special interest.</p> <p>The house is situated on an elevated vantage point. It is designed to take advantage of the views out to the north east, with the designed parkland and scattered trees surviving within the foreground, and borrowed views of the rural landscape beyond its boundary. These elements make a positive contribution to the significance of the affected assets.</p>	National Highways is in agreement with the assessment of significance of this heritage resource, and it is reflected in the discussion of Henlade House contained within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
32	Historic England	<p><b>Significance of heritage assets - Castle Neroche</b> Castle Neroche consists of a motte and bailey castle, along with earlier defensive works associated with multi-phase enclosures, situated on a spur of land protruding from the Blackdown escarpment. Its conspicuous location acts as a display of power as well as having a defensive function. The building is designated as a scheduled monument due to its national importance and its setting is an integral element in our understanding of its historic role.</p>	National Highways is in agreement with the assessment of significance of this heritage resource, and it is reflected in the discussion of Castle Neroche contained within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
33	Historic England	<p><b>Impact of the proposed development</b> In our view the proposed road scheme has the potential to have an adverse impact on a number of highly designated heritage assets. Further information is required in respect of the PEIR to enable the Examining Authority and Historic England, together with other statutory consultees and interested parties, to make a rigorous assessment of the potential impacts and whether they can be avoided, or if all opportunities to minimise those impacts have been designed into the scheme. This process is necessary to demonstrate that great weight has been given to the conservation of the heritage asset through the emerging development of the scheme.</p>	National Highways has individually assessed all potentially impacted heritage resources, including the contribution made by their setting. This is reported within ES Chapter 6 Cultural heritage and its supporting appendices (Document References 6.2 and 6.4). Where possible impacts have been reduced or eliminated through the development of the design.	N/A
34	Historic England	<p><b>Draft Environmental Statement (ES)</b> Having reviewed the draft ES Historic England has set out the following comments by chapter which we consider will need to be addressed prior to submission of the application.</p>	National Highways acknowledges this comment.	N/A
35	Historic England	<p><b>Draft Environmental Statement (ES) – a) Chapter 2 – The Project</b> Table 2-1 sets out the objectives of the project, which include the environment. Unfortunately, the historic environment is not made reference to as a contributing factor to this objective. We consider this to be an oversight as the historic environment has an intrinsic role in terms of our understanding of the environment and landscape.</p> <p>Sustainable development under the National Planning Policy Framework (NPPF) recognises the historic environment as a key component to this environmental objective. The National Policy Statement for National Networks (NPSNN) identifies that its overall strategic aims are consistent with the NPPF including achieving sustainable development (Para 1.18 and 1.20). The NPSNN also recognises that development should be designed to minimise environmental impact and identify ways to enhance the historic environment (Para 3.2 and 3.5). Consequently, we consider that the historic environment should be recognised as part of the outlined objectives for the proposal.</p>	<p>The scheme objectives are outlined in ES Chapter 2 The project (Document Reference 6.2) which includes under the Environment objective “to avoid unacceptable impacts on the surrounding landscape and natural historic environment and explore opportunities for enhancement.”</p> <p>The historic environment is recognised as a part of the objectives for the scheme, and assessed against the National Planning Policy Framework (NPPF) and the National Policy Statement for National Networks (NPSNN) in ES Chapter 6 Cultural heritage (Document Reference 6.2) and the Case for the Scheme (Document Reference 7.1).</p>	N/A
36	Historic England	<p><b>Draft Environmental Statement (ES) – b) Chapter 3 – Alternative Routes</b> Cultural heritage is identified as a criterion within the associated options appraisal considering the alternative routes (Appendix 3.2). Unfortunately, the main discussion in Chapter 3 is based on the objective set out in Chapter 2. As the historic environment has not been included at this stage, there is no assessment of how cultural heritage has been taken into account in the process of identifying the preferred option. As great weight needs to be given to the historic environment (NPSNN 5.131), and in line with the comments raised above (NPSNN 1.18, 1.20,</p>	The Preferred Route Announcement made In June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) sets out the reasons for the selection of a preferred route, including an appraisal of alternatives and the associated factors used to appraise the options (which included cultural heritage). National Highways has progressed the scheme accordingly, and the options assessment process is set out in ES Chapter 3 Assessment of alternatives (Document Reference 6.2). Please refer to Chapter 2 of this Consultation	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		3.2 and 3.5), the assessment of the alternative routes should include a more robust assessment of the historic environment.	Report (Document Reference 5.2) for further information. The Environmental Impact Assessment (EIA) has been carried out in relation to the Preferred Route.	
37	Historic England	<p><b>c) Chapter 6 - Cultural Heritage - i. Format of documentation</b> Chapter 6 is a dedicated chapter on Cultural Heritage. However, the majority of the assessment is spread across five appendices (6.1 - 6.5) with only the mitigation information included in Chapter 6. The evidence base is currently disjointed, particularly between Appendix 6.3, 6.4 and the information on mitigation in Chapter 6. Further consideration should be given as to how these various reports can more easily be read in conjunction with one another in order to reflect the staged approach set out in Good Practice Advice Note 3, The Setting of Heritage Assets (GPA3). The main ES chapter should provide a summary of the assessment as set out within the various appendices and not be limited to an assessment of the mitigation.</p> <p>Whilst we appreciate the need to produce an assessment in line with the Design Manual for Roads and Bridges (DMRB) and EIA Regulations, we have reservations regarding the sole use of a tabular and atomised approach to the assessment of impact on individual heritage assets. In our view, this approach fails to properly engage with the nature of the significance of the assets and their relationships with each other, the surrounding topographic landscape, and their shared historic and archaeological landscape context. We consider that such matrices tend to confuse concepts of the significance, sensitivity and magnitude of impact whilst atomising complex relationships between features and apparent impacts. In line with GPA3 a narrative description of significance and impact should be submitted to accompany the matrix based assessments.</p> <p>Furthermore, no historic map regression has been provided which forms a key piece of evidence as part of any assessment process trying to understand significance, particularly at a landscape scale. This evidence based needs to be provided as part of the supporting documentation prior to making a statutory application.</p>	National Highways acknowledges this concern for greater clarity and readability across Chapter 6 Cultural heritage of the PEI Report presented at statutory consultation and related chapter of the Environmental Statement (ES) and its appendices (Document References 6.2 and 6.4). Given the scale of the assessment, the tabular approach has been used to allow for location of specific details, but includes narrative assessment of setting and significance in line with the comments here. Additionally, where there are significant impacts, ES Chapter 6 Cultural heritage (Document Reference 6.2) includes a narrative description of the elements required under GPA3. Further signposting and cross-referencing has been added to the ES to enable easier and clearer navigation across the appendices. A historic map regression has been undertaken as part of the baseline analysis, contained within ES Appendix 6.1 Archaeological and Historical Background (Document Reference 6.4). To make this clearer, a summary of all elements of the baseline methodology has been included within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
38	Historic England	<p><b>c) Chapter 6 - Cultural Heritage - ii. Assessment of Value</b> Table (6-2) sets out the relative environmental values of differing levels of designation. We note reference to LA104 from DMRB; however, the table is neither consistent with this nor internally consistent. For example, grade II Registered Park and Gardens are included within the medium value while grade II listed buildings are appropriately recognised within the high category. Both of these are national designation and as such should be given weight within the value table.</p>	National Highways acknowledges this comment in relation to assessment of value. Grade II Registered Parks and Gardens have been assigned high value within ES Chapter 6 Cultural heritage (Document Reference 6.2) and Table 6-2 updated accordingly.	N/A
39	Historic England	<p><b>c) Chapter 6 - Cultural Heritage - iii. Appendix 6.3 - Gazetteer of Heritage resources</b> Due to the tabular nature of the assessment process key relationships and the contribution that different assets make to each other has not been clearly articulated within the report. An obvious example is the relationship between Hatch Court and its landscape, which within the report does not recognise the value the landscape contributes to the significance of the grade I listed house. This is important as it means that the Registered landscape is not only valued as a national designation in its own right but also contributes to the significance of the house as an important part of its setting. This example is not isolated and therefore we advise that the value attributed to assets through their relationship with other designated or non-designated heritage assets needs to be more explicitly addressed in the ES prior to submission of the DCO application.</p>	National Highways acknowledges this issue. The Gazetteer of heritage resources presented as ES Appendix 6.3 (Document Reference 6.4) has been formatted numerically. In addition, greater cross-referencing has been added with additional grouping within ES Chapter 6 Cultural heritage (Document Reference 6.2), where appropriate, to allow greater discussion of how impacts to groups of heritage resources (particularly Hatch Park, but also others such as Henlade House and Jordans Park) have been addressed.	N/A
40	Historic England	<p><b>c) Chapter 6 - Cultural Heritage - iv. Appendix 6.4 - Preliminary Impact Assessment Table</b> In our view some of the assessed magnitude of impacts appear too low in relation to the proposed works. This may be due to inconsistencies between the proposals and what is considered under the assessment. For example, A358 Plan and Profile Drawing Section 1 (HE551508/ARP/HML/ML_A358_Z/-DR-ZH-000002) shows that the scheme will bring the alignment of Stoke Road considerably closer to Musgrave Farmhouse, encroaching over the historic boundary adjacent to the house and resulting in the loss of the existing curtilage wall. This element of the works and resulting impacts is not referred to within the assessment in Appendix 6.4.</p>	<p>National Highways acknowledges and has considered the comments made in relation to preliminary heritage impacts. ES Chapter 6 Cultural Heritage (Document Reference 6.2) includes a full assessment of the finalised design, carried out in line with DMRB LA104 and LA106.</p> <p>Following review of the updated information, including that on Musgrave Farmhouse, further discussions have taken place between National Highways and Historic England and further details are contained in the Statement of Common Ground between Historic England and National Highways (see Statement of Commonality, Document Reference 7.3).</p>	No

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Therefore, in our view, there is insufficient information included from which the level of harm can be ascertained.		
41	Historic England	<p><b>c) Chapter 6— Cultural Heritage— v. Avoiding and Minimising Harm</b> The Preliminary Impact Assessment Table does not consider whether any potential harm could be avoided or minimised. We note that mitigation is provided under Table 6-5 but this does not address the requirement to avoid or minimise harm where identified prior to considering how that harm might be mitigated.</p> <p>In the case of Musgrave Farmhouse this element of the work has not yet been considered in detail which is disappointing due to the sensitivity of the site and the potential impact of the proposed development. Consequently, it is not clear whether the potentially significant harm that could be caused by the realignment of Stoke Road and the loss of the historic boundary and the erosion of the setting in such close proximity to the house could be avoided.</p>	<p>ES Chapter 6 Cultural heritage (Document Reference 6.2) includes a discussion of embedded mitigation that applied during the design development. Acknowledging this comment from Historic England, National Highways has updated the Appendix 6.4 Impact Assessment Tables (Document Reference 6.4) to include a note of where there is embedded mitigation applied prior to the assessment of the magnitude of impact. In addition, further detail has been supplied in relation to heritage impacts to Musgrave Farmhouse.</p> <p>The preliminary design as subject to the DCO application is the optimal solution but it is acknowledged there would be a significant effect on Musgrave Farmhouse, as has been assessed in ES Chapter 6 (Document Reference 6.2). The design must adhere to, at least, the minimum road safety standards, requiring a slight western offline alignment for Stoke Road. Other options have been considered but discounted because they would not be feasible or acceptable because of their impacts.</p>	No
42	Historic England	<p><b>Draft Environmental Statement (ES) - d) Chapter 7 - Landscape</b> As part of the Landscape Chapter, visualisations should also be prepared in order to better understand the potential visual impacts of the scheme on various affected heritage assets. Where required they should be cross referenced within the setting assessment.</p>	ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) cross-references the visualisations presented within ES Chapter 7 Landscape and visual effects (Document Reference 6.2), where appropriate, within the discussion of setting. Landscape visualisations relevant to heritage assets are presented on ES Figure 7.9 (Document Reference 6.3), with the locations shown on ES Figure 7.4 (Document Reference 6.3).	N/A
43	Historic England	<p><b>d) Chapter 7 - Landscape - i. Selection of views</b> None of the viewpoints proposed consider the impact of the development in views from or towards any of the heritage assets affected. This is disappointing as Historic England specifically identified a number of sites within our EIA scoping response and also identified the need for the Heritage Consultant to be engaged at an early stage in this process.</p> <p>Therefore, in light of the potential impact that could be caused, we would expect to have seen clear evidence included in the PEIR and the viewpoint selection that the heritage consultants had been engaged at an early stage to identify the relevant views. The selection should not only have considered direct views from the asset but also views where the new road and the affected heritage asset can be seen together, for example the relationship with the road in views towards church towers.</p> <p>In our opinion, views should be provided in relation to all the highly graded heritage assets identified within the PEIR and should be agreed with both Historic England and heritage specialists from the LPAs. We have identified a number of views that we would expect to be included but these are by no means an exhaustive list.</p> <ul style="list-style-type: none"> <li>• Musgrave Farmhouse <ul style="list-style-type: none"> <li>o Viewpoint (VP) 4 should ensure that Musgrave Farm is identified within the view</li> <li>o A VP along Stoke Road looking north should be provided in order to understand the impact of the realignment of the road on the setting of Musgrave House.</li> </ul> </li> <li>• Henlade House <ul style="list-style-type: none"> <li>o A VP from the front doors looking north across the Vale.</li> </ul> </li> <li>• Hatch Court <ul style="list-style-type: none"> <li>o Clarification in respect of the location of VP 12 in relation to the main house and park. It may be that this could be altered to capture both the heritage asset and the landscape effects.</li> <li>o VP from near the church looking S/ SW. We understand that it is not intended to have lights at the Martock's Tree Green Junction; however, should this change through the application process then a view that considers the development at night and the impact of the additional lighting should be provided.</li> </ul> </li> <li>• Church of St Aldhelm and St Eadburgha <ul style="list-style-type: none"> <li>o VP 28 and 29 should take in the church tower within the frame.</li> <li>o An additional VP needs to be taken to assess the impact of the new road and the new secondary road from the churchyard.</li> </ul> </li> <li>• Castle Neroche <ul style="list-style-type: none"> <li>o We note VP32 and 33 offer some indication of the impact of the scheme from a</li> </ul> </li> </ul>	<p>National Highways has made an assessment for each resource identified of the contribution made by their setting, where there is the potential for impact, in line with HE2017 The Setting of Heritage Assets.</p> <p>National Highways note that changes to the setting of heritage resources do not occur solely through visual aspects of the scheme, and also include noise and vibration. The assessment reported in ES Chapter 6 Cultural heritage (Document Reference 6.2) has been undertaken and overseen by heritage specialists with a high level of professional experience in assessing the impact of changes to the setting of heritage resources. The assessment therefore does not rely on specific viewpoints from individual heritage resources, but was informed by site visits, detailed discussions with landscape and visual impact assessment (LVIA) specialists, and with reference to the representative viewpoints selected by those LVIA specialists.</p>	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		similar vantage point to Castle Neroche. It might be advantageous to provide a specific VP from this location due to the sensitivity of the asset and the importance of longer ranged views in respect of its significance.		
44	Historic England	<b>d) Chapter 7— Landscape— ii. Impact of Mitigation on Viewpoints</b> Table 6-5 Significant Construction Effects identifies potential mitigation through the development of hedgerows and woodland. Where this is proposed, the montages should show how the vegetation will develop over time at the point of construction, 5 and 10 years.	The photomontages are proposed to illustrate how the vegetation will develop over time. They are presented at Year 1 and Year 15, to align with the approach and methodology submitted in the Environmental Scoping Report and agreed with the Examining Authority (see ES Appendix 4.1 The Planning Inspectorate Scoping Opinion (Document Reference 6.4)), and assessment timescales set out within ES Chapter 7 Landscape and visual effects (Document Reference 6.2).	N/A
45	Historic England	<b>Draft Environmental Statement (ES) - e) Chapter 11 - Noise &amp; Vibration</b> The operational impacts of the scheme are still outstanding (Para 6.9.2 - PEIR). Due to the lack of the evidence in respect of this aspect of the assessment, we would question whether the PEIR has been submitted prematurely before all the information could be prepared.  We consider that the heritage consultant should be involved in identifying which assets need to be considered in order to inform the assessment of the operational impacts of the scheme in heritage terms. In light of this lack of information, it calls into question the validity of the assessment undertaken to date and the magnitude of impact levels attributed to the more sensitive heritage assets.	Heritage and noise specialists have liaised to add the appropriate receptors to the noise modelling and results have been reported in the Environmental Statement ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4).	N/A
46	Historic England	<b>Draft Environmental Statement (ES)— e) Chapter 11— Noise &amp; Vibration</b> <b>i. Vibration</b> In terms of the proximity of some of the works to highly designated listed buildings, we would question why the potential impact of vibration has been scoped out and whether it would be advantageous to consider any monitoring especially in those areas of significant engineering works. If listed buildings are to be scoped out, the ES must demonstrate how established thresholds have been applied in line with agreed standards to satisfy the Examining Authority and consultees that there will be no potential for impact.	The potential for vibration effects has been discussed between specialists as part of the design and assessment process.  To clarify; only operational vibration is scoped out of the assessment, however construction vibration has been assessed. National Highways has assessed the impact of construction vibration from earthworks and pavement compaction activities on heritage assets within ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4).  Where vibration impacts could occur at noise and vibration sensitive receptors (used by people), these have been reported in ES Chapter 11 Noise and Vibration (Document Reference 6.2), with results presented in ES Appendix 11.4 (Document Reference 6.4). Details of proposed mitigation measures to control potential vibration impacts is presented within ES Chapter 11 Noise and vibration (Document Reference 6.2) and ES Appendix 2.1 Environmental Management Plan (EMP) (Document Reference 6.4).	N/A
47	Historic England	<b>Draft Environmental Statement (ES) - f) Plans and Drawings</b> Further plans and sections are required in order to inform the assessment of the potential impact. Where there is the potential for direct impact on a listed building (or other designated heritage asset) or within its immediate setting, detailed drawings should be provided in order to fully ascertain the extent of impact. This is the case at Musgrave Farm, where the farmyard would be affected as well as potentially its more immediate domestic curtilage due to the loss of its historic boundary wall. This lack of detail means that there are some inconsistencies within the report which it is important for National Highways to address prior to submission of any statutory application.  Long sections should also be provided in order to illustrate the potential impact of the proposed works and the relationships with affected listed buildings. For example, a section through Musgrave Farmhouse to show the relationship of the cutting and the proposed bridge to the main house is required.	National Highways has submitted general arrangement plans, engineering drawings and sections and heritage designation plans as part of the DCO submission (see Document reference 2.5a, 2.5b and 2.10) which demonstrate the setting of the listed building in the context of the scheme.	N/A
48	Historic England	<b>Policy Context</b> The National Policy Statement for National Networks (NPSNN) states at paragraph 5.2 that 'Sufficient relevant information is crucial to good decision-taking...'  The NPSNN polices for the Historic Environment are Chapter 5, Para 5.120 -5.143. The NPSNN includes a requirement that the applicant should describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the asset's importance and no more than is sufficient to understand the potential impact of the proposal on their significance. As a minimum the relevant Historic Environment Record should have	National Highways acknowledges this comment made by Historic England. Cultural heritage has been considered through the development of design options for the scheme. In cases such as the listed bridge near Thornfalcon (heritage asset name "ROAD BRIDGE AT NGR ST 2815 2249" (NHLE: 1177245)) this process has allowed the significant adverse effect identified in the PEI Report to be avoided completely. The ES (Document Reference 6.2) submitted with the DCO contains the details of the assessment process alongside the approach to mitigation (see Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)).	Yes

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<p>been consulted and the heritage assets assessed using appropriate expertise. Where a site on which development is proposed includes or has the potential to include heritage assets with archaeological interest, the applicant should include an appropriate desk-based assessment and, where necessary, a field evaluation. (5.127). At present Historic England does not consider that sufficient information has been included in the draft ES to meet the requirements of the NPSNN.</p> <p>Through the assessment process, the NPSNN recognises that when considering the impact of a proposed development on any heritage assets, the Secretary of State should take into account the particular nature of the significance of the heritage asset and the value that they hold for this and future generations. This understanding should be used to avoid or minimise conflict between their conservation and any aspect of the proposal (Para 5.129). It identifies that any harmful impact on the significance of a designated heritage asset should be weighed against the public benefit of development, recognising that the greater the harm to the significance of the heritage asset, the greater the justification that will be needed for any loss (5.132). There is also a desirability of sustaining and, where appropriate, enhancing the significance of heritage assets, the contribution of their settings and the positive contribution that their conservation can make to sustainable communities - including their economic vitality (NPS 5.130). While the Applicants should look for opportunities for new development within Conservation Areas and World Heritage Sites, and within the setting of heritage assets, to enhance or better reveal their significance. Proposals that preserve those elements of the setting that make a positive contribution to or better reveal the significance of the asset should be treated favourably</p> <p>The NPSNN identifies that when considering the impact of a proposed development, the Secretary of State should give great weight to the asset's conservation (NPS 5.131).</p> <p>At present Historic England does not consider that sufficient weight has been given to the conservation of designated heritage assets and consequently the need to identify ways to avoid or minimise harm before considering how it might be mitigated are not sufficiently demonstrated in the process of assessment conducted under the draft ES.</p> <p>Where harm is identified, then it will need to be considered against any public benefits offered by the scheme (Para 5.133 and 5.134).</p>		
49	Historic England	<p><b>Historic England's Position and Recommendation</b> In Historic England's view, the draft ES does not adequately address all of the above considerations.</p> <p>In our view the following information remains outstanding from the PEIR and should be provided in order to ensure that the ES provides adequate information by which to consider the impacts of the proposal. These outstanding issues are -</p> <ul style="list-style-type: none"> <li>o Ensuring that the Historic Environment is incorporated into the objectives (chapter 2 and 3) and is given great weight in the assessment of the various options of alternative routes.</li> <li>o Providing a narrative assessment of heritage impacts between Chapter 6 and the appendices (6.1 - 6.5) ensuring that it reflects the staged approach set out in GPA3</li> <li>o Ensuring that the values applied to designated assets are appropriately and consistently applied..</li> <li>o Reviewing the levels attributed to the Magnitude of the Impacts especially in respect to the potential impact at Musgrave Farm and consider the ways in which to harm caused by the scheme can be avoided.</li> <li>o Including a comprehensive set of visualisations to inform and illustrate the assessment of impact of the development on the historic environment including time lapses to understand the effect of proposed mitigation over time.</li> <li>o Submitting additional information in respect of Noise and vibration (Chapter 11) to be incorporated into the assessment regarding heritage assets.</li> </ul>	<p>National Highways acknowledges the recommendations provided by Historic England at statutory consultation, notably in relation to the PEI Report.</p> <p>The documents submitted for the DCO include:</p> <ul style="list-style-type: none"> <li>• The protection of the Historic Environment as part of the objectives of the scheme as detailed in ES Chapter 2 The project (Document Reference 6.2)</li> <li>• Narrative assessment of significant impacts to heritage resources within ES Chapter 6 Cultural heritage, in combination with the tabulated assessment in Appendix 6.4, both undertaken following the staged approach detailed in GPA3 (Document Reference 6.2 and 6.4)</li> <li>• Values of heritage resources applied in line with Design Manual for Roads and Bridges (DMRB) LA104 and LA106 (ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4))</li> <li>• Detailed discussion of the impacts to Musgrave Farm (see ES Chapter 6 Cultural heritage (Document Reference 6.2))</li> <li>• As noted at row ID 42. visualisations as part of ES Chapter 7 Landscape and visual effects (Document Reference 6.2), which inform the assessment of the impact of the scheme on the setting of heritage resources.</li> <li>• Assessment of the effects of noise and vibration on heritage resources (see ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4))</li> </ul>	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		o Submitting additional detailed plans and sections to inform assessment and understanding of the potential impacts of the scheme.	<ul style="list-style-type: none"> <li>Drawings as required for the DCO Volume 2 (Plans, Drawings and Sections), Specifically General Arrangement Plans (Document Reference 2.5a and 2.5b)</li> </ul> <p>It should be noted that the ES (Document Reference 6.2) only assesses the impacts of the preferred route – previous alternative routes are not included, see ES Chapter 3 Assessment of Alternatives (Document Reference 6.2).</p>	
50	Historic England	<b>General</b> Historic England will provide on-going advice to National Highways on all the above to ensure that the ES provides the information reasonably required to both assess the environmental effects of the development under the Environmental Impact Assessment (EIA) regulations and enable the consultees and ultimately the Examining Authority to develop an informed view of the project.	National Highways are continuing to engage with Historic England and welcome feedback throughout the DCO application and examination process.	N/A
51	HSE	General HSE's involvement is as a statutory consultee under Section 42 of the Planning Act 2008 and we give our advice in that context.  HSE does not have infrastructure or apparatus within the red line boundary of this project.	National Highways acknowledges the confirmation from HSE that no infrastructure or apparatus within HSE operations are located within the scheme boundary.	N/A
52	HSE	Please note that HSE's response remains unchanged from that sent to you in April 2021 (this is copied again below for information with up to date responses).	National Highways acknowledges these comments made by HSE and note the position remains unchanged from the advice provided to the EIA scoping report.	N/A
53	HSE	Hazardous Substances Would Hazardous Substances Consent be needed? The presence of hazardous substances on, over or under land at or above set threshold quantities (Controlled Quantities) may require Hazardous Substances Consent (HSC) under the Planning (Hazardous Substances) Act 1990 as amended. The substances, alone or when aggregated with others, for which HSC is required, and the associated Controlled Quantities, are set out in The Planning (Hazardous Substances) Regulations 2015. Hazardous Substances Consent would be required if the proposed development site is intending to store or use any of the Named Hazardous Substances or Categories of Substances and Preparations at or above the controlled quantities set out in schedule 1 of these Regulations. Further information on HSC should be sought from the relevant Hazardous Substances Authority.	The Planning (Hazardous Substances) Regulations 2015 makes provision for giving consent, permission or other authorisation means by making a Development Consent Order under section 114 of the Planning Act 2008, as is sought for the scheme.  As hazardous substances consent is expected to be required during construction, this would be addressed in the Consents and Agreements Position Statement (Document reference 7.2).	N/A
54	HSE	General 22 April 2021 (comments raised on the scoping report) Thank you for your letter of the 13 April 2021 regarding the information to be provided in an environmental statement relating to the above project. HSE does not comment on EIA Scoping Reports but the following information is likely to be useful to the applicant. HSE's Land Use Planning Advice (CEM HD5 Contribution)	National Highways acknowledges this comment.	N/A
55	HSE	Electrical Safety No comment from a planning perspective.		N/A
56	HSE	Explosives Sites HSE has no comment to make as there are no licensed explosives sites in the vicinity.	National Highways acknowledges the confirmation from HSE that no licensed explosive sites within HSE operations are located within the scheme boundary or wider vicinity.	N/A
57	HSE	Major Accident Hazard Pipelines - location Will the proposed development fall within any of HSE's consultation distances? With reference to Figure 1.1 Proposed Scheme Location contained within Highways England document A358 Taunton to Southfields Dualling Scheme Environmental Impact Assessment Scoping Report - Volume 2: Figures HE551508-ARP-EGN-ZZ-RP-LE-000012 23/03/21 on which is shown a redlined area. Passing through the southernmost section of the redlined area are two Major Accident Hazard Pipelines operated by National Grid Gas PLC: <ul style="list-style-type: none"> <li>14 Feeder Barrington / Kenn [Transco ref: 1530, HSE ref: 7262]</li> <li>20 Feeder Ilchester / Ottery St. Mary [Transco ref: 1531, HSE ref: 7263]</li> </ul> The redlined area does not currently fall within the consultation distances of any Major Accident Hazard Installation(s).	A description of mitigation from major accidents and disasters is provided in ES Chapter 4 Environmental assessment methodology (Document Reference 6.2).	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
58	HSE	<p>Major Accident Hazard Pipelines - response</p> <p>At this stage of the consultation process it is not possible for HSE to provide an indication of its public safety Land Use Planning advice; There is currently insufficient information available to determine to what extent the proposed development will impact on new or existing populations (permanent or temporary) that may fall within Major Accident Hazard Pipeline(s) HSE's public safety consultation zones.</p> <p>Please note if at any time a new Major Accident Hazard Pipeline is introduced or existing Pipeline modified prior to the determination of a future application, then the HSE reserves the right to revise its advice.</p> <p>Likewise if prior to the determination of a future application, a Hazardous Substances Consent is granted for a new Major Hazard Installation or a Hazardous Substances Consent is varied for an existing Major Hazard Installation in the vicinity of the proposed project, then again the HSE reserves the right to revise its advice.</p>	A description of mitigation from major accidents and disasters is provided in ES Chapter 4 Environmental assessment methodology (Document Reference 6.2).	N/A
59	Ministry of Defence	<p><b>General</b></p> <p>Thank you for consulting the Ministry of Defence (MOD) on the above proposed development.</p> <p>It is understood that National Highways Limited intends to make an application to the Secretary of State for Transport under Section 37 of the Planning Act 2008 for a Development Consent Order (DCO). The Application is for the proposed A358 Taunton to Southfields Dualling Scheme in Somerset.</p> <p>The schemes proposals include approximately 8.5 miles of new dual carriageway connecting junction 25 of the M5 at Taunton with the existing A303 at Southfields roundabout near Ilminster, incorporating the creation of 4 new bridges along the route.</p>	National Highways acknowledges this comment.	N/A
60	Ministry of Defence	The proposed application route occupies the statutory aerodrome height and birdstrike safeguarding zones surrounding RNAS Merryfield, which serves as a satellite to the larger RNAS Yeovilton, and it is used mainly as a training facility for helicopter pilots.	National Highways has commenced dialogue with RNAS Merryfield, and this engagement and liaison will continue in advance of and during the construction phase. In response, a Bird Strike Risk Assessment (BSRA) and Bird Hazard Management Plan (BHMP) is presented as part of the EMP (ES Appendix 2.1 Environmental Management Plan, Annex J) (Document Reference 6.4) which sets out measures to reduce the occurrence of large and/or flocking birds identified as hazardous to aircraft. The BSRA and BHMP covers the entire scheme and considers surface water management and drainage proposals. The BSRA and BHMP identifies hazardous species based on desk study and field survey information, and provides details on habitat creation, habitat management and bird deterrent measures that would be included in the scheme to ensure the risk of bird strike remains very low through the construction and operational phases of the scheme.	N/A
61	Ministry of Defence	<p><b>Aerodrome height safeguarding zone</b></p> <p>These statutory height safeguarding zones ensure aviation safety by providing a means to comment on, object to, or require conditions where development exceeds obstacle limitation surfaces. These obstacle limitation surfaces are the means by which the airspace above and associated with an aerodrome is classified and which allow the physical effect of development on aviation safety to be assessed. Based upon the information provided we have completed an initial safeguarding assessment and can confirm there are potential aerodrome height safeguarding concerns with the proposals.</p> <p>The MOD recognises that cranes and/or other tall plant equipment may be used during the construction phase to install the bridges. Cranes in the vicinity of aerodromes are of concern to the MOD. Given the proximity of the application site to RNAS Merryfield, we will need to ensure that any cranes will not affect aviation safety. Therefore, it will be necessary for the developer to liaise with the MOD prior to the erection of any cranes or temporary tall structures.</p>	National Highways has commenced dialogue with RNAS Merryfield, and this engagement and liaison will continue in advance of and during the construction phase.	N/A
62	Ministry of Defence	<p><b>Lighting</b></p> <p>If any flood lights are to be used during the construction of this development this will need to be coordinated with the station, so it doesn't impede air traffic operations.</p>	The need for, and details of, temporary lighting during construction will be developed in future project stages and this will be reviewed and co-ordinated with RNAS Merryfield as necessary to avoid impeding air traffic operations. Further details with regard to construction task lighting is presented within ES Chapter 2 The project (Document Reference 6.2) and Appendix 2.1 Environmental Management Plan (EMP) (Document Reference 6.4).	N/A
63	Ministry of Defence	<p><b>Birdstrike safeguarding zone</b></p> <p>This a zone 12.87km/8miles in diameter around certain military aerodromes designed to regulate developments that could introduce or support populations of</p>	National Highways has produced a detailed Bird Strike Risk Assessment (BSRA) and Bird Hazard Management Plan (BHMP) presented as part of the EMP (ES Appendix 2.1 Environmental Management Plan, Annex J) (Document Reference 6.4) which sets out	No

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		large and/or, flocking birds hazardous to aircraft. The proposed development sites fall within this birdstrike safeguarding zone and as such, we would pay particular attention to any surface water management/ drainage proposals for the development during and after the construction phase.	measures to reduce the occurrence of large and/or flocking birds identified as hazardous to aircraft. The BSRA and BHMP covers the entire scheme and considers surface water management and drainage proposals. The BSRA and BHMP identifies hazardous species based on desk study and field survey information, and provides details on habitat creation, habitat management and bird deterrent measures that would be included in the scheme to ensure the risk of bird strike remains very low through the construction and operational phases of the scheme.	
64	Natural England	<b>General</b> Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.	National Highways acknowledges the response from Natural England.	N/A
65	Natural England	<b>Engagement with the scheme to date</b> Natural England welcomes the ongoing pre-application discussions on matters within our remit that have been taking place with National Highways and its ecology team over the past months. The engagement has been constructive and it is clear that advice we have provided has informed the survey scope and other matters covered in the Preliminary Environmental Report. Overall, we consider that the project team is taking a robust approach to the assessment of impacts on natural environment interests and, without prejudice, laying the foundations for an acceptable package of mitigation and compensatory/enhancement measures. As per early discussions on the A358 scheme we consider that the overall objective for a large infrastructure scheme such as this should be to deliver a measurable 'net gain' in terms of biodiversity but also to do that in a manner that improves the overall habitat connectivity and resilience within and around the route corridor.	National Highways acknowledges the support for previous and ongoing engagement with Natural England.  National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow and woodland habitat creation. These areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358.  The Defra Biodiversity Metric 3.1 (published in April 2022) has been used to account for habitat losses and gains on the project. The results of this assessment are provided in the Biodiversity Metric Report found within ES Appendix 8.6 (Document Reference 6.4).	Yes
66	Natural England	<b>Biodiversity interests - Designated Sites and HRA Screening</b> We note that with the exception of Bracket's Coppice SAC and Severn Estuary SPA, all of the identified internationally designated sites will be taken forward for appropriate assessment. This includes Hestercombe House SAC, Beer and Quarry Caves SAC, and Exmoor and Quantock Oakwoods SACs, all notified for bat populations, and you have noted that the Somerset Levels and Moors SPA and Ramsar Site are hydrologically linked to the proposed scheme. We agree that the A358 project should be assessed in terms of water quality impacts on the Ramsar Site and note that a preliminary assessment is not provided at this stage. We note that you have also stated that air quality impacts are preliminarily assessed as having a neutral effect on designated sites due to the distance.	National Highways acknowledges the references to designated sites and the requirement for an HRA screening. An updated Habitats Regulations Assessment: Screening and Statement to Inform Appropriate Assessment (Document Reference 6.5) is included with the DCO application.  ES Chapter 8 Biodiversity (Document Reference 6.2) concludes that a significant effect as a result of nitrogen deposition is predicted at one Local Wildlife Site/Ancient Woodland (Saltfield Copse). Mitigation has been developed to compensate for this impact including sensitive management of the habitat and provision of new woodland in locations away from the road. The impact at all other designated sites is not significant.	Yes
67	Natural England	<b>Biodiversity – Habitats and Protected Species</b> We consider that appropriate guidance and good practice has been followed in the survey work carried out to date, which provides a firm basis for considering how best to integrate scheme design with strategy for mitigation and enhancement / net gain. It is clear that route corridor supports a range of habitats and protected species. Bats and dormice are of particular importance with significant populations. With a scheme of this nature, these and other species are likely to be affected by loss, severance, or fragmentation of habitat. In designing appropriate strategies for avoidance, mitigation, and enhancement, it is useful to start from a position of understanding the key ecological networks and features of the route corridor. The largely wooded long-distance ridge that intersects the scheme in the Hatch Beauchamp area is a prime example and Natural England is supports a focus on the maintaining and enhancing the Griffin Lane wildlife corridor underneath the existing A358. We look forward to further discussions on the strategy for wildlife interests. The project will require a number of wildlife licenses and we will be liaising with our wildlife licensing team in order to provide advice on licensing needs as needed.	Further consultations with Natural England have been undertaken in development of the mitigation strategies as detailed within ES Chapter 8 Biodiversity Appendices 8.24-8.35 submitted as part of the DCO application (Document Reference 6.4, Appendices 8.24-8.35). These strategies have informed the approach to be taken and detailed within the various wildlife licences required for the scheme.  The environmental mitigation for the scheme has been designed to improve connectivity between existing and proposed areas of semi-natural habitats along the scheme. Offsite mitigation has been proposed in key locations to bolster isolated blocks of semi-natural habitats helping to ensure the long-term viability of these habitats and the species communities they support. As an example, large blocks of woodland have been created around the Griffin Lane area on either side of the A358 to complement the belt of woodland that runs through the landscape in this part of Somerset, extending from the levels south to the Blackdown Hills. This approach is in line with the aims of the Nature Recovery Network strategy.	Yes
68	Natural England	<b>Habitats and Protected Species – Bats</b> We have held a number of discussions with the project team about the scope and findings of bat survey. The survey has included a range of techniques designed to develop a sound understanding of how bats are using the route corridor landscape and interacting with the road and other features, which has included a range of techniques. It has been agreed that due to some limitations with interpretation of	Details of the bat roost, bat activity, bat trapping and radio tracking and bat hibernation surveys are provided in ES Chapter 8 Biodiversity (Document Reference 6.2) and supporting ES Appendices 8.8 Ecological Baseline Report – Bat Roosts, 8.9 Ecological Baseline Report – Bat Activity, 8.10 Ecological Baseline Report – Bat Trapping and Radio Tracking and 8.11 Ecological Baseline Report – Bat Hibernation. The ES (Document Reference 6.4) also includes a mitigation strategy for bats (ES Appendix 8.27 Ecological	Yes

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		early bat survey work undertaken several years ago, it is likely to be necessary to undertake further targeted survey in 2021/22 in order to complete the picture and provide additional evidence to underpin and justify the mitigation strategy for bats. A number of maternity colonies for Annex II species, Bechstein's and Barbastelle, have been identified in vicinity of the A358, which is significant. Other Annex II bats including horseshoe bats also use the area in significant numbers as well as many of the more common species. The preliminary analysis is that the Annex II species regularly cross the existing A358, particularly at favoured locations where mature habitat features support this.	Mitigation Strategy – Bats) which has been discussed in meetings with Natural England to inform a bat mitigation strategy along agreed lines. All surveys have been undertaken in accordance with best practice guidance and details of survey methodologies are provided in the relevant bat reports. In summary, fifteen of the seventeen species of bat known to breed in the UK have been identified along the scheme and three of the four rarest species have been shown to have maternity roosts close to the scheme.	
69	Natural England	<b>Habitats and Protected Species - Dormouse</b> Significant numbers of dormice have been recorded, notably in hedgerows adjacent to the existing A358 that are proposed for removal. We would be pleased to discuss mitigation options with the project team in the coming weeks.	National Highways acknowledges the comments made in relation to dormouse species. Further consultations with Natural England have been undertaken in development of the ES Appendix 8.30 Ecological Mitigation Strategy - Hazel Dormouse (Document Reference 6.4). The strategy informs the approach to be taken and detailed within the dormouse licence application.	Yes
70	Natural England	<b>Habitats and Protected Species – Ancient woodland Priority Habitat</b> In total, you have identified five ancient woodlands as being at risk of degradation associated with construction activities. We would welcome further discussion on the detailed mitigation that will be submitted as part of the Environmental Statement. You have identified a 5% increase in N deposition as a percentage of the lower critical load for the relevant habitat at Bickenhall ancient woodland with further studies needed to identify impacts and the required mitigation.	Further discussions have been undertaken with Natural England since publication of the PEI Report. ES Chapter 8 Biodiversity (Document Reference 6.2) includes an updated assessment of impacts upon Ancient Woodlands, reflecting mitigation measures discussed with Natural England.	Yes
71	Natural England	<b>Habitats and Protected Species - Broadleaved woodland Priority Habitat</b> We note that you have identified that 22.4ha of broadleaved semi-natural woodland will be permanently lost, representing a major adverse impact on this priority habitat. As mitigation, you propose to create approximately 42.8 hectares of broadleaved semi-natural woodland, and 10.3 hectares of open woodland grassland mosaic habitat and conclude that it would result in an overall large beneficial effect, once established. In broad terms we are supportive of these aims and, again, anticipate further discussion of the detailed mitigation and enhancement proposals.	Since publication of the PEI Report, the proposals for woodland creation and management have been further progressed following discussions with land owners and stakeholders including Natural England.  National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow and woodland habitat creation. These areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358. Protected species and habitat specific mitigation strategies have been developed and are included within ES Chapter 8 Biodiversity Appendices 8.24-8.35 submitted as part of the DCO application (Document Reference 6.4).	Yes
72	Natural England	<b>Summary of preliminary assessment of likely significant construction and operation effects</b> The report included tables outlining the likely significant effects from the construction and operation of the project. We support much of the preliminary analysis. However, ahead of detailed mitigation proposals being available, it is questionable as to whether it can be concluded that the only residual effect from the scheme will be on adjacent ancient woodland. There are significant risks to bat populations in particular that require carefully designed mitigation strategies to be developed before firm conclusions can be drawn.	National Highways acknowledges support for the preliminary analysis of construction and operation effects. The assessment of significant effects from the construction and operation of the project has been updated and can be found within ES Chapter 8 Biodiversity (Document Reference 6.2) of the ES.	Yes
73	Natural England	<b>Protected Landscapes</b> The Preliminary Environmental Information report recognises the proposed scheme's proximity to the Blackdown Hills Area of Outstanding Natural Beauty (AONB). As noted in the report, we agreed in principle to the proposed viewpoints and considered that they provide a sound basis for assessing impacts on the Blackdown Hills AONB. We support the proposal for the scheme being unlit, except except for key junctions, and not increasing light pollution to the dark night skies of the AONB and its setting. We also note that the report refers to low noise road surfacing to reduce noise impacts and we would support its use along the entire length of the scheme. We advise that you give weight to the advice of the Blackdown Hills AONB, given their knowledge of the site, its special qualities, and its wider landscape setting, together with the aims and objectives of the AONB's statutory Management Plan.	National Highways acknowledges Natural England's support for the scheme, including proposed mitigation, and have taken the advice on the Blackdown Hills AONB into consideration. An assessment of the potential impacts on the AONB is presented within ES Chapter 7 Landscape and visual effects and its supporting appendices (Document Reference 6.2 and 6.4).	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
74	Office for Nuclear Regulation (ONR)	General With regard to A358 Taunton to Southfields Dualling Scheme, ONR makes no comment on this proposed development as it does not lie within a consultation zone around a GB nuclear site. You can find information concerning our Land Use Planning consultation process here: ( <a href="http://www.onr.org.uk/land-use-planning.htm">http://www.onr.org.uk/land-use-planning.htm</a> ).	National Highways acknowledges the confirmation from The Office for Nuclear Regeneration (ONR) that no comments are provided in relation to the scheme as it does not lie within a consultation zone around a nuclear site.	N/A
75	Royal Mail	General/legal Royal Mail's consultants BNP Paribas Real Estate have reviewed the section 42 consultation documents, scrutinising the proposed development and its potential impacts on Royal Mail's business interests. Royal Mail has two nearby operational properties both in Taunton within 4 miles of the proposed scheme. Under section 35 of the Postal Services Act 2011, Royal Mail has been designated by Ofcom as a provider of the Universal Postal Service. Royal Mail is the only such provider in the United Kingdom. The Act provides that Ofcom's primary regulatory duty is to secure the provision of the Universal Postal Service. Ofcom discharges this duty by imposing regulatory conditions on Royal Mail, requiring it to provide the Universal Postal Service. Royal Mail's performance of the Universal Service Provider obligations is in the public interest and should not be affected detrimentally by any statutorily authorised project. Accordingly, Royal Mail seeks to take all reasonable steps to protect its assets and operational interests from any potentially adverse impacts of proposed development.	National Highways acknowledges these comments provided by Royal Mail, which outline the general and legal responsibilities of Royal Mail.	N/A
76	Royal Mail	General/insufficient information Royal Mail and BNP Paribas Real Estate have reviewed the PEI Report document for this major infrastructure proposal which has been identified as having potential for impact on Royal Mail operational interests. However, at this time Royal Mail is not able to provide a consultation response due to insufficient information (in particular the Framework Construction Traffic Management Plan) being available to adequately assess the level of risk to its operation and the available mitigations for any risk. Therefore, Royal Mail wishes to reserve its position to submit a consultation response/s at a later stage in the consenting process and to give evidence at any future Public Examination, if required.	National Highways acknowledges that Royal Mail would like to reserve its position to give evidence at DCO examination stage, if required. National Highways is committed to engaging with key stakeholders including Royal Mail on an ongoing basis to help ensure needs are met where and when appropriate.	N/A
77	The Coal Authority	General Having reviewed the 4no. section plans of the proposed scheme against our coal mining information, I can confirm that the full extent of the proposed scheme lies outside the defined coalfield. Accordingly the Coal Authority has no specific detailed comments to make.  In the spirit of efficiency of resources and proportionality, it will not be necessary for you to consult the Coal Authority at any future stages of the project. This email can be used as evidence for the legal and procedural consultation requirements.	National Highways acknowledges the confirmation from The Coal Authority that no defined coalfield areas lie within the scheme boundary, and that therefore there are no comments to make in relation to coal mining.	N/A
78	The Environment Agency	<b>General</b> Thank you for consulting the Environment Agency on the A358 Taunton to Southfields, formal pre-application stage (Planning Act 2008 Section 42), which includes the Preliminary Environmental Information Report (PEIR).  We have no objection in principle to the proposals at this stage, but we wish to provide the following comments. We reserve the right to make further comments in the future as more detail of the proposal becomes available.	National Highways welcome support of the proposals from the Environment Agency and have continued to engage throughout the development of the DCO application.	N/A
79	The Environment Agency	<b>Sustainable Drainage Systems</b> Highway Sustainable Drainage Systems (SuDS) will need to be carefully engineered to both balance flows and protect the water environment from pollution. Biodiversity / habitat benefits should also be considered where appropriate.	The proposed drainage proposals for the scheme are based on capturing and containing surface water generated by hardstanding areas and attenuating them down to existing rates of runoff (greenfield runoff rate) with a basis on using sustainable drainage systems. The Environment Agency have been involved in specific consultation meetings where flood risk and drainage have been discussed. In addition, embedded mitigation measures have been included for specific watercourses providing watercourse channels with a more natural plan form and cross sections which enhance aquatic vegetation and have been known to buffer the effects of high nutrient loading. Details of embedded mitigation measures are presented within ES Chapter 2 The project (Document Reference 6.2). The potential land contamination sites were investigated during the ground investigation in 2021. The findings of the ground investigation, risk assessments and mitigation measures are included in ES Appendix 9.2 Land contamination generic quantitative risk assessment	N/A
80	The Environment Agency	<b>Groundwater and contaminated land</b> We understand that investigations relating to both groundwater and contaminated land are ongoing and information presented in the PEIR will be expanded upon in the Environmental Statement. We consider that further detailed information including but not limited to the following areas is required to demonstrate that risks to quality and quantity of controlled waters will be acceptable.		N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<ul style="list-style-type: none"> <li>• Management of contaminated land</li> <li>• Potential impacts on groundwater levels and flows</li> <li>• Potential impacts on surface water flows</li> <li>• Drainage strategy</li> </ul>	<p>(Document Reference 6.4) and also summarised in ES Chapter 9 Geology and soils and ES Chapter 13 Road drainage and the water environment (Document Reference 6.2). Additional ground investigation is also proposed at detailed design stage, subject to successful DCO consent, to investigate additional potentially contaminated land sites identified after completion of the fieldwork in 2021. These sites are assessed as low to moderate risk but if required, National Highways will produce a remediation strategy to deal with identified contamination.</p> <p>Potential impacts on groundwater levels and surface water flows are set out in ES Chapter 13 Road drainage and the water environment (Document Reference 6.2) and the drainage strategy is included in ES Appendix 13.6 Drainage strategy report (Document Reference 6.4).</p>	
81	The Environment Agency	<p><b>Flood Risk</b> We have no objection in principle relating to flood risk issues. At this stage of the proposal, we are happy with the approach and methodology used to assess flood risk and the impact of the scheme on flood risk, however we need to see the detailed assessment and the results before we can provide more detailed comments.</p> <p>The basic principle we are expecting the scheme to follow is to be safe for a 1 in 100 year plus climate change, and to make sure it does not increase flood risk to third party as a result of longer culverts, new abutments, and land raising. We will need to be provided with an electronic copy of the models for our review, details of any new roads crossing the watercourse, and mitigation proposals.</p>	<p>The drainage design and the design of crossing structures takes account of the 1 in 100 year return period flow plus an allowance for climate change and has included floodplain compensation measures to ensure no significant impacts on flood risk as outlined in ES Appendix 13.1 Flood risk assessment (Document Reference 6.4).</p> <p>Fluvial hydraulic modelling methodology has been agreed with the Environment Agency through the consultation process and, in line with agreement with the Environment Agency, all fluvial model reports, and associated modelling files, for relevant watercourses crossing the scheme have been shared with Somerset Council as Lead Local Flood Authority (LLFA) for their review and approval. This matter is agreed as set out in the Environment Agency Statement of Common Ground and Somerset Council Statement of Common Ground (see Statement of Commonality, Document Reference 7.3).</p>	N/A
82	The Environment Agency	<p><b>Environmental Permits/ Licences</b> Any required environmental permits or licences must be obtained for the scheme. The requirement for these should be discussed with us at the earliest opportunity.</p>	<p>Permits and licences required are described in technical chapters within the Environmental Statement (ES) (Document Reference 6.2) and have been discussed with relevant statutory consultees as necessary. Discussions are ongoing on some matters as recorded in the Statement of Commonality (Document Reference 7.3) and further information about the approach being taken to permits and licences through the Development Consent Order is set out in the Consents and Agreements Position Statement (Document Reference 7.2).</p>	N/A
83	The Environment Agency	<p><b>Fisheries, Biodiversity and Geomorphology</b> The scheme should be designed to ensure that any watercourse realignments do not result in a loss of habitat and should be designed appropriately to support the current fish and invertebrate species that inhabit the waters. This should ensure that no straight, trapezoidal channels should be created. Riverbanks should be planted with appropriate vegetation once created.</p> <p>The use of culverts must be avoided wherever possible as this is a high risk activity and are also deemed to be barriers to fish migration.</p> <p>At least 10% Biodiversity Net Gain throughout the proposed scheme should be achieved, with an emphasis of increasing connectivity and habitat functionality to surrounding habitats. Opportunities should be sought to connect habitats created within the scheme, to wider partnership projects. Accordingly, the project team is advised to work with the Somerset Local Nature Partnership and others, to maximise opportunities within and beyond the scheme footprint.</p>	<p>National Highways have designed a scheme to reduce direct loss of watercourses and associated riparian corridors as much as possible. This includes only culverting watercourses where this is absolutely necessary, designing culverts with aquatic and riparian habitats and species in mind as well as flood risk, which includes keeping culverts length to a minimum. In addition, where watercourse realignments are required, these have been designed with sinuosity to replicate a more natural design and to ensure opportunities for riparian habitats are maximised. These initiatives will centre on providing river channels with a more natural plan form and cross section and enhanced aquatic vegetation.</p> <p>National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow and woodland habitat creation. These areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358.</p> <p>The Defra Biodiversity Metric 3.1 (published in April 2022) has been used to account for habitat losses and gains on the project. The results of this assessment are provided in the Biodiversity Metric Report found within ES Appendix 8.6 (Document Reference 6.4).</p>	No
84	The Environment Agency	<p><b>Environmental Management Plan</b> We note in the PIER that an Environmental Management Plan will be produced, which we support.</p>	<p>A first iteration Environmental Management Plan (EMP) for the design stage has been prepared and is provided within ES Appendix 2.1 (Document Reference 6.4). The EMP has been prepared in accordance with the Design Manual for Roads and Bridges (DMRB) guidance LA 120 Environmental Management Plans and will be updated throughout construction and handover in accordance with this guidance.</p>	N/A
85	Transport Focus	<p>General - rail passengers Thanks for this information about the A358 scheme. From the perspective of rail passengers travelling on the route affected by these works, Transport Focus would register a neutral response, but make a few comments.</p>	<p>National Highways acknowledges the views expressed by Transport Focus and is committed to engaging with key stakeholders including Transport Focus on an ongoing basis to help ensure needs are met where and when appropriate.</p>	No

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<p>I guess this scheme is likely to necessitate some disruption to rail passengers. We'd urge that you work closely with ourselves, as well as Network Rail and the train operators, to ensure that disruption is carefully planned and mitigated, and is communicated well in advance. Besides wanting it to be kept to a minimum, especially closures, passengers want to know what's happening and why, and what the effect will be on their journey. That's true right from the early planning stages of their journey, right through to on the day.</p> <p>We're happy to work with you to ensure that passengers are part of the planning/delivery process of any works wherever relevant, based on our research.</p>		
86	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - standards and guidance Background</b> This annex to the UKHSA's response refers primarily to the content presented in the PEIR Chapters 11 and 12, and associated appendices. Standards and Guidance UKHSA recommends that in para. 11.2.17 the following documents are added as relevant standards and guidance</p> <ul style="list-style-type: none"> <li>o WHO (2018) Environmental Noise Guidelines for the European Region [1]</li> <li>o Defra (2014) Environmental Noise: Valuing impacts on sleep disturbance, annoyance, hypertension, productivity and quiet [2]</li> </ul>	These references have been added to ES Chapter 11 Noise and vibration (Document Reference 6.2).	N/A
87	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Assessment methodology, noise</b> Several Noise Important Areas (NIAS) were identified within the study area, some of which will experience an increase in noise exposure. These are areas with the highest noise exposure at a national level, and UKHSA expects very careful consideration of any potential increase in noise exposure in these areas, however small. The Applicant should explore every opportunity for reducing the existing noise exposure in these areas, thereby leading to an improvement in health and quality of life.</p>	There are nine Noise Important Areas (NIA)s near the existing A358 where most properties would be subject to reductions in noise levels as a result of the scheme. A small number of properties in NIA ID 3497, ID 3499 and ID 12939 are expected to have an increase in noise levels. All appropriate measures have been applied as far as it is practicable and sustainable to do so, to mitigate and reduce these effects. This is reported in ES Chapter 11 Noise and vibration (Document Reference 6.2).	N/A
88	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Land Quality</b> It is noted that two areas of historical quarrying have been identified within the 250m study area, but the presence or backfilled material is unknown. We request further information on these sites and assessment on whether the proposed scheme may interact with them and any potential for health impacts.</p>	There are a number of several backfilled areas along the route, with varying degrees of information available - the specific locations of the two quarries raised in the consultation response are not identified, however the scheme does not interact directly with any backfilled quarries. The assessments completed to date have identified all potential land contamination sites (where information is available) and these have been subject to ground investigation as necessary, and risk assessments completed in accordance with current guidance to identify any potential health impacts. This information is presented in ES Chapter 9 Geology and soils (Document Reference 6.2) and in ES Appendix 9.2 Land contamination generic quantitative risk assessment (Document Reference 6.4).	N/A
89	UK HEALTH SECURITY AGENCY	<p><b>Health and Wellbeing - Physical activity and active travel / access to open space</b> The report identifies significant potential impact through the loss or change in formal Public Rights of Way (PRoW) and the existing road network. Active travel forms an important part in helping to promote healthy weight environments and increase physical and as such it is important that any changes have a positive long term impact where possible. The existing list of enhancements is acknowledged and OHID would expect continued local consultation to identify further enhancements, particularly to existing sections of A358 which are to be de-trunked. The report acknowledges the significant impact on PRoW and the intention to deliver early re-provision is welcome.</p> <p>The report identifies that both the traffic assessment (TA) and the Walking, Cycling and Horse Riding Assessment (WCH) have yet to be completed and reported. It is important that any findings are used to review the PEIR assessment of significance for population and human health.</p> <p>The PEIR makes no qualitative assessment on the impact from construction on walkers, cyclists or horse riders using the affected road network. There is no consideration of the number and location of any construction HGVs or construction workforce vehicles using the local road network.</p>	The walking, cycling and horse-riding assessment is complete, and a review of the preliminary design has also been undertaken. ES Appendix 12.2 Population and human health Impact Assessment Tables (Document reference 6.4) identifies the sensitivities of each of the Public Rights of Way (PRoW) that are affected (based on use), the magnitude of the impact (changes to distances travelled to use Public Rights of Way (PRoW)) and the significance. In terms of health impacts, these are considered in the context of access to open space and nature in addition to transport and connectivity in general (which includes PRoW). Consideration of how changes may influence rates of active travel are discussed in the health assessment in ES Chapter 12 Population and human health (Document Reference 6.2).	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<p><b>Recommendations</b></p> <p>The WCH survey results should be used to review the existing allocation of sensitivity and final assessment of significance to each of the affected PRoW or bridleways.</p> <p>There should be continued local consultation in order to identify any additional enhancements for active travel and physical activity and agree effective mitigation measures.</p> <p>The ES should screen and address any impacts on pedestrians and cyclists including delay, amenity, or safety using the local road network, as outlined within the IEMA GEART Guidelines.</p>		
90	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Land Quality</b></p> <p>Due to the number of contaminated land sites both within the area of the proposed scheme and nearby full investigations and risk assessments should be undertaken and appropriate remediation, prevention, management plans and mitigation measures should be in place. This information is not currently available and consequently we will provide comments on these once the appropriate detail is available.</p>	The potential land contamination sites were investigated during the ground investigation in 2021. The generic risk assessment and mitigation measures are included in ES Appendix 9.2 Land contamination generic quantitative risk assessment (Document reference 6.4) and summarised in ES Chapter 9 Geology and soils (Document reference 6.2). Additional ground investigation is also proposed at detailed design stage, subject to successful DCO consent, to investigate additional potentially contaminated land sites identified after completion of the fieldwork in 2021. These sites are assessed as low to moderate risk but if required, National Highways will produce a remediation strategy to deal with identified contamination.	N/A
91	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Assessment methodology</b></p> <p>UKHSA welcomes the distinction between the word significance from a noise policy and an EIA perspective (c.f. 11.3.26-29). UKHSA also welcomes the commitment to consider a broad range of factors in the determination of significance for the ES (cf. 11.3.4, 11.3.45). It is important that the consideration of these additional factors follows a clear and transparent methodology, which ideally should be agreed with local stakeholders.</p>	The factors described in Design Manual for Roads and Bridges (DMRB) guidance LA 111 Noise and Vibration, Table 3.60, to determine final significance have been applied and the methodology is described in ES Chapter 11 Noise and vibration (Document Reference 6.2).	N/A
92	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Non-technical summary report</b></p> <p>It is not clear why the Population and human health section reports predominantly beneficial effects attributed to the Scheme, and only "Likely permanent moderate adverse effects on four private properties". The noise assessment has identified approximately 1200 dwellings that will experience an increase in daytime and night-time noise of 3dB or more in the long term, and 439 residential properties will likely have direct permanent adverse significant noise effects (using the significance criteria chosen for this Scheme). These noise "effects" are adverse effects on the health and quality of life of communities living near the proposed Scheme. UKHSA recommends that the Population and Health chapters in both technical and non-technical documentation clearly outline the quantified health impacts attributable to noise from the Scheme.</p>	<p>The ES (Document Reference 6.2) has updated the information in relation to health outcomes and noise. At a population level the assessment concludes that there would be neutral health outcomes with similar numbers of people experiencing noise increases as decreases. However, ES Chapter 12 Population and human health (Document Reference 6.2) health assessment does distinguish between the different wards and identifies where there may be health effects on areas that are smaller than ward level and/or in relation to vulnerable people who may be more susceptible to changes in noise.</p> <p>Based on the latest traffic data, since the PEI Report was produced, detailed modelling of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. The likely significant noise and vibration effects are identified within ES Chapter 11 Noise and vibration (Document Reference 6.2). A total of 110 permanent significant adverse effects and 360 permanent significant beneficial effects have been identified.</p>	Yes
93	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Tranquillity</b></p> <p>We support the acknowledgement that noise levels below the chosen LOAEL could result in adverse effects in very quiet rural locations, however it is not clear how this was or will be considered in the assessment methodology.</p> <p>Table 11.1 makes reference to a requirement in the National Policy Statement for National Networks (NPSNN) to consider proximity of the proposed development to quiet places and other areas that are particularly valued for their tranquillity, acoustic environment or landscape quality, and states that "No such features have been identified in the noise study area at this stage". UKHSA encourages the Applicant to consult at the earliest opportunity with national and local stakeholders, including CPRE, Natural England, local authorities and community groups, who are best placed to identify such areas, even if such areas are not yet designated.</p>	The comments of UK Health Security Agency are noted and the assessment of noise impacts on areas valued for their tranquillity, acoustic environment or landscape quality have taken into account any consultation undertaken with stakeholders. Noise effects on designated tranquil areas are considered by the Landscape topic reported in ES Chapter 7 Landscape and visual effects (Document Reference 6.2). ES Figure 7.5 (Document Reference 6.3) presents the national tranquillity mapping data provided by CPRE.	N/A
94	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Construction noise</b></p> <p>We note and welcome the quantitative assessment of construction noise impacts that has been undertaken at this stage.</p> <p>Para. 11.9.6 states that "Compounds are proposed within the Nexus 25 development, north-west of Stoke Road overbridge and east of Mattock's Tree</p>	The comments in the PEI Report referred to the noise impact not being significant taking into account the relative levels of ambient noise from road traffic and the likely level of noise from a construction compound, at any noise sensitive receptors. This is in line with the established method of quantitative assessment used in the ABC method in BS 5528 Code of practice for noise and vibration control on construction and open sites. A full construction noise assessment has now been undertaken, including updated	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<p>Green junction. These locations are all next to existing busy roads and therefore it would not be expected that the levels of noise from the compounds would be significant in these locations.” The Applicant should clarify whether it meant that the noise impact would not be significant. UK HSA also questions whether it is appropriate to assume that no significant impacts would occur when areas already exposed to high levels of road traffic noise are subjected to high levels of construction noise. The two types of noise have distinctly different characteristics, and it may not be appropriate to assume that construction noise would not give rise to adverse effects based solely on a comparison of averaged noise metrics such as LAeq.</p> <p>UK HSA recommends that a full and detailed Construction Environmental Management Plan (CEMP) is developed and implemented by the Applicant and/or the contractor responsible for construction.</p> <p>The CEMP should include a detailed programme of construction which highlights the times and durations of particularly noisy works, the measures taken to reduce noise at source, the strategy for actively communicating this information to local communities, and procedures for responding effectively and promptly to any specific issues or complaints arising.</p>	<p>locations of construction compounds and reported in ES Chapter 11 Noise and vibration (Document Reference 6.2). An Environmental Management Plan (EMP) has been produced and is presented in ES Appendix 2.1 (Document Reference 6.4) which sets out how noise impacts will be managed including a requirement for the contractor to develop a Noise and Vibration Management Plan. The commitments set out in the EMP are secured through a requirement in the draft DCO submitted with the DCO application.</p>	
95	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Baseline Sound Environment</b></p> <p>Para. 11.3.9 states that baseline noise surveys were not undertaken for the preparation of the PEIR due to the national lockdown which would have resulted in atypical baseline noise levels as a result of lower than usual traffic flows. UKHSA welcomes the commitment to undertake a baseline noise survey.</p> <p>UKHSA recommends that sound surveys combine traditional averaged noise levels with a qualitative characterisation of the sound environment, including any particularly valued characteristics (for example, tranquillity) and the types of sources contributing to it. Baseline sound surveys should be designed to provide a reliable depiction of local diurnal noise variations for both weekdays and weekends, in a variety of locations, including the difference between day (07:00-19:00), evening (19:00-23:00) and night-time (23:00-07:00) periods. Achieving these aims is likely to require long- term noise monitoring in multiple locations for a period greater than seven days. This information should be used to test the robustness of any conversions between noise metrics (e.g. converting from LA10,18hr to LAeq,16hr, Lnight and Lden), and the assumption that the proportionate traffic flow volumes within the study area between daytime and night-time can be considered as typical (c.f. 11.3.21).</p> <p>A variety of metrics can be used to describe the sound environment with and without the scheme – for example, levels averaged over finer time periods, background noise levels expressed as percentiles, and number of event metrics (e.g. N65 day, N60 night). Where possible, this suite of metrics should be used to inform judgements of significance. There is emerging evidence that intermittency metrics can have an additional predictive value over traditional long-term time-averaged metrics for road traffic noise [5].</p>	<p>Noise surveys were completed over a two-week period in September / October 2021 including some noise logger positions and a number of attended Calculation of Road Traffic Noise (CRTN) shortened measurement procedure positions. Comments from UKHSA have been taken into account in reviewing and using the data gathered, however, the prediction methodology remains the preferred method for assessing road schemes in the UK to account for annual average traffic flows (including future baseline and with Scheme predictions) and moderate adverse meteorological conditions. Noise survey results are reported in ES Appendix 11.3 Baseline Noise Survey (Document Reference 6.4).</p>	N/A
96	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - Assessment methodology, noise</b></p> <p>With regards to assessment factor 3 (Table 11-13), UKHSA questions whether all receptors that will experience a noise increase of up to 1dB in the short term (classified as “negligible” magnitude of change) should be excluded from this approach.</p> <p>Receptors that fall in this category and which are already exposed to high levels of noise risk being “locked-in” to these high exposure levels for the foreseeable future as a result of the Scheme, which could be considered as indicative of a significant adverse impact on health and quality of life.</p>	<p>Noise increases of less than 1dB (based on annual average traffic and moderately adverse meteorological factors affecting propagation) would not be perceptible and as such would not constitute an adverse effect of the scheme. However, where opportunities present themselves to sustainably improve the noise environment, these have been taken.</p>	N/A
97	UK HEALTH SECURITY AGENCY	<p><b>Response to PEIR content in chapters 11 and 12 - LOAELs and SOAELs</b></p> <p>Tables 11-2 and 11-9 set out the proposed construction and operational noise LOAEL and SOAEL values for the scheme, respectively. The Applicant has chosen to use the default values suggested in DMRB LA 111.</p>	<p>National Highways will continue to use the DMRB LA 111 standard prescribed values for Lowest Observed Adverse Effect Level (LOAEL) and (Significant Observed Adverse Effect Level) (SOAEL) for this scheme. The notes relating to LOAEL and SOAEL thresholds have been removed from Table 11-9. ES Chapter 11 Noise and vibration (Document</p>	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		UKHSA welcomes the Applicant's attempt at translating the chosen LOELs and SOAELs in health terms. We would prefer if the Applicant prioritises the most recent WHO Guidelines (2018) [1] for this purpose. These Guidelines are based on a more robust review of recent scientific evidence than previous Guidelines. For example the onset of moderate community annoyance is likely to be at a lower level than 50dBLAeq,16h (at 52dB Lden, roughly equivalent to 50dB LAeq,16hr [16], between 5 to 9% of the population is estimated to be highly annoyed from road traffic noise [8]). For the choice of SOAEL for night-time noise, cardiovascular effects are typically expressed in terms of Lden [1], and it would be more appropriate to state what the chosen SOAEL means in terms of number of people highly sleep disturbed. It would also be helpful to explain what the chosen SOAEL for daytime means in health terms.	Reference 6.2) explains how these thresholds relate to WHO Environmental Noise Guidelines 2018.	
98	UK HEALTH SECURITY AGENCY	<b>Response to PEIR content in chapters 11 and 12 - Air Quality</b> Reducing public exposures to non-threshold pollutants (such as particulate matter and nitrogen dioxide) below air quality standards has potential public health benefits. We support approaches which minimise or mitigate public exposure to non-threshold air pollutants, address inequalities (in exposure), and maximise co-benefits (such as physical exercise) and encourage their consideration during the design, environmental and health impact assessment, implementation, and post-implementation monitoring stages.	National Highways welcomes the support set out by UK Health Security Agency in relation to the mitigation approaches for air pollution. The impact of construction dust and operational traffic were assessed and reported in the PEI Report Chapter 5 (Air Quality) following the guidance outlined within DMRB LA 105 Air Quality. The impact of construction dust, construction traffic and operational traffic has been assessed based on updated design information in accordance with DMRB LA 105 guidance for the Environmental Statement (ES) (Document Reference 6.2). In accordance with this guidance a simple level assessment was undertaken. The methodology and results of these assessments are reported in ES Chapter 5 (Air Quality) and supporting appendices (Document Reference 6.2 and 6.4). Best practice mitigation measures relating to construction dust and construction traffic are included in ES Appendix 2.1 Environmental Management Plan (EMP) (Document Reference 6.4).	N/A
99	UK HEALTH SECURITY AGENCY	<b>Response to PEIR content in chapters 11 and 12 - Assessment of Likely Significant Effects</b> Referring to Appendix 11.4 Tables 2-2 and 2-3, UKHSA acknowledges and welcomes that the Scheme will result in approximately 1,000 dwellings experiencing a reduction in both daytime and night-time noise exposure in the long term. However, the number of dwellings experiencing an increase is of concern. In the long-term more than 7,000 people <sup>1</sup> are predicted to experience an increase in noise exposure (daytime and night-time) as a result of the Scheme (with current mitigation measures). Many of these people are already exposed to average noise levels that exceed WHO noise guideline levels [1]. UK HSA recommends that these numbers are presented broken down into categories according to the absolute DoN (existing) noise exposure. Furthermore, the Applicant needs to give very careful consideration of mitigation measures to reduce the associated disease burden.	National Highways note the comments and suggestions. Further consideration has been given to Tables 2-2 and 2-3 in Appendix 11.4 of the PEI Report and these tables are recreated in ES Chapter 11 Noise and vibration as Table 11-23,11-24 and 11-25 (Document Reference 6.2). As is standard for road scheme assessments in the UK, the absolute do-minimum in the opening year is used as the baseline for the assessment rather than the do-nothing (DN) scenario. This includes all committed development and new infrastructure which are subject to their own planning approvals.	N/A
100	UK HEALTH SECURITY AGENCY	<b>Somerset Progressive School</b> The report identifies a very large adverse effect on the school due to severance, but does not explain this conclusion or confirm if this adverse effect will continue once any mitigation is put in place. It is assumed that the severance relates to the stopping up of the existing access road and the provision of a new access road, with an increase in journey length and travel time during the construction phase. Users of this facility will be highly sensitive to any change, but the report does not identify any specific communication with the school on the potential effects from the scheme. Additionally the report identified potential impacts from noise, but does not detail the differential effects on users of the school or how this impacts the indoor and outdoor learning environment. Given the highly and specific nature of the sensitivity of this school much greater detail is expected from the assessment, planned mitigation and dialogue with the school. Please note that a more detailed response regarding the noise assessment is provided earlier in this response.  Recommendation The ES should detail the communication with the school and the response from the school in relation to the potential effects from the scheme and any options for mitigation or enhancements. The ES should also report in more detail the cause of the severance and changes in the acoustic environment, and planned mitigation, and how this may vary over time.	National Highways have been engaging with Somerset Progressive School to ensure appropriate mitigation is in place. The Equality Impact Assessment (EqIA) submitted with the DCO application (Document Reference 7.5) identifies any particular impacts on those effected with protected characteristics and reasonable adjustments based on this.  All potential impacts on the Somerset Progressive School are documented within ES Chapter 11 Noise and vibration and ES Chapter 12 Population and human health (Document Reference 6.2), including consideration of mitigation measures.	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
101	UK HEALTH SECURITY AGENCY	If you require any clarification on the above points or wish to discuss any particular issues please do not hesitate to contact us.	National Highways acknowledges the response provided.	N/A
102	UK HEALTH SECURITY AGENCY	Response to PEIR content in chapters 11 and 12 - Air Quality Several receptors are located within 200m of the construction works and the assessment has established that mitigation measures are likely to be required to reduce the risk of potential adverse impacts associated with the dust. There are also a number of potential new sensitive receptors being introduced due to the proposed and planned new sites and dwellings nearby which must also be considered in terms of potential human health impact. It is also stated that exposure to the construction works and therefore any potential risk of adverse health impacts is temporary, however this phase is suggested to take at least three years and therefore we would expect to see details of how the scheme proposes to firstly prevent exposure and mitigate against potential detrimental health impacts.	National Highways acknowledges the response provided in relation to construction works and mitigation. The impacts of construction dust associated with the construction of the new route have been assessed and are presented within ES Chapter 5 Air quality (Document Reference 6.2). Dust effects are predicted to be negligible with the implementation of best practice mitigation measures, which have been outlined in the Environmental Management Plan (EMP) (Document Reference 6.4, Appendix 2.1). An assessment of construction traffic was scoped out based on the standards outlined within DMRB LA 105 Air Quality as the scheme generated construction traffic is expected to be less than 200 average daily HGV movements.	No
103	UK HEALTH SECURITY AGENCY	Response to PEIR content in chapters 11 and 12 - Air Quality Detailed modelling of the Scheme's potential air quality impacts has yet to be undertaken. This will be carried out once the detailed traffic data is available for the Scheme. There is reference in the PEIR about impacts on NO2 and PM10 from monitoring already undertaken but no mention of PM2.5. We recommend that information on PM2.5 should be included in subsequent documentation and submissions.	National Highways acknowledges the response provided by the UK Health Security Agency. An assessment of PM10 has been scoped out of further assessment based on the standards outlined in DMRB LA 105, as concentrations in the area are well below the annual mean objectives. DMRB LA 105 also states that there should be no need to assess PM2.5 as the UK currently meets its legal requirements for the achievement of the PM2.5 air quality thresholds.	N/A
104	UK HEALTH SECURITY AGENCY	Response to PEIR content in chapters 11 and 12 - Air Quality The final selection of mitigation measures, including specific measures relating to construction phase, HGV movement and traffic management, and/or the need for operational mitigation, will be considered as part of the assessment and reported in the ES and the Construction and Environmental Management Plan (CEMP). This document is not currently available and consequently we will provide comments on these once the appropriate documentation is available.	National Highways acknowledges the response provided by the UK Health Security Agency in relation to construction works and air quality. The impact of construction dust, construction traffic and operational traffic has been assessed based on updated design information in accordance with DMRB LA 105 guidance for the Environmental Statement. An assessment of construction traffic was scoped out based on the standards outlined within DMRB LA 105 Air Quality as the scheme generated construction traffic is expected to be less than 200 average daily HGV movements. The methodology and results of these assessments are reported in ES Chapter 5 (Air Quality) Environmental Statement and supporting appendices (Document References 6.2 and 6.4). Best practice mitigation measures relating to construction dust and construction traffic are included in ES Appendix 2.1 Environmental Management Plan (EMP) (Document Reference 6.4).	N/A
105	UK HEALTH SECURITY AGENCY	Response to PEIR content in chapters 11 and 12 - Air Quality Baseline assessments continue to rely on a series of NOx diffusion tube assessments as well as Defra background exposure assessments. All quoted data in the scoping report related to NO2 rather than particulates. We would recommend that the applicant considers the need for additional air quality monitoring for both NOx and particulate matter at both existing and proposed locations where there may be elevated exposure to transport related air pollution.  We note that the predicted air quality impacts will be modelled and that no monitoring is proposed once the road comes into operation. We recommend that NOx and particulate measurement data should be used to help validate the outputs of the model and request that post completion monitoring should be considered to validate the predicted levels.	Monitoring sites used to determine existing air quality are located on the scheme affected road network. As agreed with the local authorities, no further monitoring was required as suitable baseline data is available from existing monitoring sites which can be used to support model verification.  An assessment of PM10 has been scoped out of further assessment based on the standards outlined in DMRB LA 105 Air Quality, as concentrations in the area are well below the annual mean objectives. DMRB LA 105 also states that there should be no need to assess PM2.5 as the UK currently meets its legal requirements for the achievement of the PM2.5 air quality thresholds. Therefore, as there is a very low risk of PM10 concentrations exceeding the annual mean objective as a result of the scheme, no monitoring of PM10 is required.  NOx monitoring sites used to determine existing air quality are located on the scheme affected road network. As agreed with the local authorities, no further monitoring was required as suitable baseline data is available from existing monitoring sites which can be used to support model verification. No significant effects have been predicted in relation to human health as a result of the scheme, therefore no post completion NOx monitoring is proposed.	N/A
106	UK HEALTH SECURITY AGENCY	Response to PEIR content in chapters 11 and 12 - Non-residential noise sensitive receptors In both the Noise and Vibration and the Population and Health chapters non-residential receptors appear to be assessed as one category, with no apparent consideration of their specific sensitivities. For example Somerset Progressive School (11.9.48) is likely to require very specific consideration of the existing and future outdoor and indoor noise environment, and its impact on the health and quality of life of its' occupants. UKHSA recommends that a more bespoke assessment if carried out for non-residential noise sensitive receptors, and one-to-	It is recognised that some receptors are likely to be more sensitive to changes in the noise environment than others. An Equality Impact Assessment (EqIA) (Document Reference 7.5) has been carried out to identify any instances when impacts may be experienced disproportionately or differentially by people with protected characteristics. Somerset Progressive School is identified within the EqIA and there is alignment between the assessment in the Environmental Statement and the EqIA. Consultation has been undertaken with Somerset Progressive School including noise and health specialists to understand any particular needs and this has been reflected in the design of the Scheme. This has resulted in predicted minor beneficial effects during operation.	No

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		one discussions are held with those receptors deemed as highest risk from noise exposure (both in terms of their existing and future external and internal noise exposure, and appropriate mitigation measures).	During construction, significant adverse impacts are anticipated and so, further bespoke studies would be carried out, in agreement with the school, to determine in more detail, the construction noise levels relative to pre-existing ambient noise levels, at the most noise sensitive rooms and to design mitigation to mitigate and minimise construction noise effects. Further detail on the assessment of noise effects and the approach to determining the noise mitigation requirements and associated commitments is given in ES Chapter 11 Noise and vibration (Document Reference 6.2) and ES Appendix 2.1 Environmental Management Plan (EMP) (Document Reference 6.4, Appendix 2.1). Further assessment relative to the Somerset Progressive School is presented within ES Chapter 12 Population and human health (Document Reference 6.2)	
107	UK HEALTH SECURITY AGENCY	Response to PEIR content in chapters 11 and 12 - Monitoring The PEIR states that the requirements of DMRB LA 111 Noise and vibration regarding monitoring and evaluation will be followed. Given the large number of people experiencing an increase in noise exposure from the Scheme, UKHSA recommends that the Applicant considers the feasibility of carrying out monitoring of health outcomes attributable to noise. Guidance on a best practice protocol for such monitoring can be found in [13].	Health outcomes are considered in ES Chapter 12 Population and human health (Document Reference 6.2), which follows the guidance document DMRB LA112 Population and human health standard. There are currently no plans to carry out monitoring of health outcomes as part of the scheme, however noise monitoring is set out in ES Appendix 2.1 Environmental management plan (Document reference 6.4), with proposals to be refined at the detailed design stage, subject to successful DCO consent.	N/A
108	UK HEALTH SECURITY AGENCY	Health and Wellbeing. Methodology - temporal scope and reporting The proposed 4-year construction timeline results in the need for very clear reporting on the temporal impacts and effects on the local population. In this context "temporary" impacts can extend over long periods, but the PEIR does not comment on how the temporal scope will be defined. This issue was also raised within the SoS Scoping Report (Para 2.3.3). The Scoping Opinion noted... "The time period this covers should be defined in the ES for each of the temporary works, as the Inspectorate assumes that not all the temporary works will remain in place for the entire duration of the construction period."  The reporting of temporary effects is therefore not clear. In order for the local community to understand the potential impacts and effects and to assess the magnitude of impacts it is important to understand the temporal nature of any impacts.  Recommendation The reporting of temporary impacts within the ES should ensure a consistent, transparent and accurate approach to the reporting of temporary effects, for example by sub dividing temporary effects into weeks, months or years.	DMRB LA112 Population and human health is the methodology primarily followed in the assessment of health as reported in ES Chapter 12 Population and human health (Document Reference 6.2). Where appropriate and possible to do so, clarity has been given on the duration of temporary impacts within the ES (Document Reference 6.2).	N/A
109	UK HEALTH SECURITY AGENCY	Health and wellbeing - Mental health - recommendation There should be parity between mental and physical health, and any assessment of health impact should include the appreciation of both. A systematic approach to the assessment of the effects on mental health, including suicide, is required.  The Mental Well-being Impact Assessment Toolkit (MWIA)2, could be used as a methodology. The assessment should identify vulnerable populations and provide clear mitigation strategies that are adequately linked to any local services or assets.  In addition to the baseline indicators the assessment would benefit from including social cohesion/connectedness, satisfaction with local area and quality of life indicators owing to their established links to mental health and wellbeing.  In terms of sources, we would draw your attention to the following: • PHE Fingertips – Mental Health and Wellbeing JSNA o Area profiles with various indicators on common mental disorders (including anxiety) and severe mental illness which can be benchmarked with other local areas as well as regional and national data • Office for National Statistics - Wellbeing Indicators o Range of datasets related to wellbeing available including young people's wellbeing measures, personal wellbeing estimates and loneliness rates by local authority When estimating community anxiety and stress in particular, a qualitative	DMRB LA112 Population and human health is the methodology primarily followed in the assessment of health as reported in ES Chapter 12 Population and human health (Document Reference 6.2). Vulnerable populations are identified within the baseline but the MWIA2 tool suggested by the respondent is not required to be considered by virtue of the application of the appropriate DMRB LA112 standard guidance.	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		assessment may be most appropriate. This may involve conducting resident surveys but also information received through public consultations, including community engagement exercises. The MWIA contains key principles that should be demonstrated in a project's community engagement and impact assessment. We would also encourage you to consult with the local authority's public health team who are likely to have Health Intelligence specialists who will have knowledge about the availability of local data. Robust and meaningful consultation with the local community will be an important mitigation measure, in addition to informing the assessment and subsequent mitigation measures.		
110	UK HEALTH SECURITY AGENCY	Health and Wellbeing - Mental health The scoping report accepted the broad definition of health proposed by the World Health Organisation (WHO) which includes reference to mental health. Mental well-being is fundamental to achieving a healthy, resilient and thriving population. It underpins healthy lifestyles, physical health, educational attainment, employment and productivity, relationships, community safety and cohesion and quality of life. A scheme of this scale and nature has impacts on the over-arching protective factors, which are: <ul style="list-style-type: none"> <li>• Enhancing control</li> <li>• Increasing resilience and community assets</li> <li>• Facilitating participation and promoting inclusion.</li> </ul> The scoping report identified potential significant impacts on mental health and social community cohesion due to land take and the demolition of private domestic property. The subsequent PEIR, however, makes no reference to mental health and wellbeing of the local community. This is a significant omission that needs to be addressed prior to the submission of the ES.	DMRB LA112 Population and human health is the methodology primarily followed in the assessment of health as reported in ES Chapter 12 Population and human health (Document Reference 6.2). The concerns have been addressed, in particular in relation to noise impacts and impacts resulting from changes to landscape and visual amenity. The methodology does not specifically identify mental health as a health outcome to be considered, however, the ES does consider mental health in relation to impacts of noise and landscape. As a population level assessment, demolition of individual properties is not considered to impact population health, although it is recognised that on an individual level, mental health and wellbeing of owners/occupiers may be affected.	N/A
111	UK HEALTH SECURITY AGENCY	Health and Wellbeing This section of the Office for Health Improvement and Disparities (OHID)'s response identifies the wider determinants of health and wellbeing we expect the Environmental Statement (ES) to address, to demonstrate whether they are likely to give rise to significant effects. OHID has focused its approach on scoping determinants of health and wellbeing under four themes, which have been derived from an analysis of the wider determinants of health mentioned in the National Policy Statements. The four themes are: <ul style="list-style-type: none"> <li>• Access</li> <li>• Traffic and Transport</li> <li>• Socioeconomic</li> <li>• Land Use</li> </ul>	DMRB LA112 Population and human health is the methodology primarily followed in the assessment of health as reported in ES Chapter 12 Population and human health (Document Reference 6.2). LA112 sets out the health determinants that are addressed in the assessment, which includes the health determinants identified, except for socioeconomic which is not included directly. 'Socioeconomic' is an expansive topic and impacts on vulnerable people within the population, which includes those who are socio-economically disadvantaged, is considered.	N/A
112	UK HEALTH SECURITY AGENCY	Response to PEIR content in chapters 11 and 12 - Mitigation Paragraph 11.8.1 states that "The proposed scheme alignment has been designed to minimise environmental effects resulting from noise impacts. Additional opportunities for embedded mitigation are being considered through the process of design development and consideration of good design principles." For operational mitigation, para. 11.8.8. states that "Further to the avoidance and mitigation measures integrated along the length of the proposed scheme to reduce adverse noise effects, consideration will be given to developing enhancements during detailed design of the proposed scheme. For example, when more design detail can be confirmed, there may be opportunities to provide noise fence barriers in certain areas, if it can be shown that this would provide beneficial enhancements with regard to noise." Given the large number of people (7k+) predicted to experience an increase in noise exposure in the long term due to the Scheme, UK HSA recommends that the Applicant considers a much broader set of mitigation measures. Whilst the primary focus should be at reducing noise at source (through the use of low noise road surfaces and road-side barriers), there are many other mitigation measures that can be considered, some of which involve addressing the so-called non-acoustic factors that moderate the causal relationship between noise and health [13]. Potential mitigation measures not mentioned in the PEIR include speed restrictions, insulation of the building envelope, access to quiet (either as a quiet side for dwellings or access to good quality local tranquil spaces [14,15]), education and communication [13]. Any measures to acoustically insulate buildings	As noted, the primary focus will be on reducing noise at source to benefit the environment and receptors in all locations (low noise surface) plus further localized mitigation measures such as bunds and noise barriers to minimise or avoid impacts.  ES Chapter 11 Noise and vibration (Document Reference 6.2) has identified three likely noise insulation qualifiers under the NIR Regulations. It is not currently proposed to go beyond this requirement.  With regard to speed restrictions, as noted in DMRB, this is not generally practical for use on trunk roads as they can encourage drivers to take alternative routes which can be less safe and result in higher noise levels for populations along the alternative routes.	No

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		<p>need a holistic consideration to the indoor environmental quality, to ensure that control of external noise ingress does not come at the expense of poorer indoor air quality, an increased risk of overheating, or exposure to high levels of noise from mechanical ventilation.</p> <p>UKHSA welcomes the commitment to consider stakeholder engagement and consultation responses when assessing the feasibility of mitigation measures (c.f. 11.8.9).</p>		
113	UK HEALTH SECURITY AGENCY	<p>Response to PEIR content in chapters 11 and 12 - Amenity space The Applicant acknowledges that PRow should be considered as noise sensitive and considered in the assessment (11.3.3), however we couldn't find any such considerations in the noise assessment. Table 11-25 states that "beneficial effects would occur at communities, outdoor amenity areas in some NIAs as a result of the proposed scheme". However, we were unable to find a more detailed consideration of the potential impacts (beneficial and adverse) of noise exposure on public and private amenity space across the study area in the noise chapter.</p>	As noted in Table 11-1 of ES Chapter 11 Noise and vibration (Document Reference 6.2), PRow have been assessed in ES Chapter 12 Population and human health (Document Reference 6.2). Table 11-25 describes the beneficial impacts on communities in general, inclusive of outdoor amenity space, for example around Henlade, as shown on the noise change ES Figures 11.3 and 11.4 (Document Reference 6.3).	N/A
114	UK HEALTH SECURITY AGENCY	<p>Response to PEIR content in chapters 11 and 12 - Health Outcomes We would also recommend that the Population and Health chapter gives a much clearer summary of the predicted health effects attributable to noise as a result of the Scheme. The same chapter should also acknowledge that noise from the Scheme could have an adverse impact on people's use of, and the restorative benefits associated with green space in the study area [10-12].</p>	An assessment of health matters has been undertaken, following DMRB LA112 Population and human health, as outlined in ES Chapter 12 Population and human health (Document Reference 6.2).	N/A
115	UK HEALTH SECURITY AGENCY	<p>Response to PEIR content in chapters 11 and 12 - Health Outcomes Given the large number of people predicted to experience an increase in noise exposure as a result of the Scheme (c.f. Appendix 11.4 Tables 2-2 and 2-3), UK HSA recommends that the Applicant carries out and presents a quantitative assessment of the number of people that will be chronically highly annoyed and sleep disturbed, and any predicted additional cases of cardiovascular disease as a result of the Scheme, using established methodologies [1-3,8-9].</p>	A proportionate assessment approach to health matters has been taken, following DMRB LA112 Population and human health, as outlined in ES Chapter 12 Population and human health (Document Reference 6.2). LA112 requests that health outcomes are assessed as being positive, negative or neutral with no quantification of the nature requested by the respondent.	N/A
116	UK HEALTH SECURITY AGENCY	<p>Health definition and project influence UKHSA exists to protect and improve the nation's health and wellbeing and reduce health inequalities; these two organisational aims are reflected in the way we review and respond to NSIP applications. The health of an individual or a population is the result of a complex interaction of a wide range of different determinants of health, from an individual's genetic make-up, to lifestyles and behaviours, and the communities, local economy, built and natural environments to global ecosystem trends. All developments will have some effect on the determinants of health, which in turn will influence the health and wellbeing of the general population, vulnerable groups and individual people. Although assessing impacts on health beyond direct effects from, for example emissions to air or road traffic incidents is complex, there is a need to ensure a proportionate assessment focused on an application's significant effects.</p>	A proportionate assessment approach to health matters has been taken, following DMRB LA112 Population and human health, as outlined in ES Chapter 12 Population and human health (Document Reference 6.2).	N/A
117	UK HEALTH SECURITY AGENCY	<p>Health and Wellbeing - Effects on residential properties Table 12-9 identifies a moderate effect on the residential properties due to severance and land take affecting viability. It does not explain this conclusion or confirm if this adverse effect will continue once any mitigation is put in place during the construction period. It is assumed that the severance relates to the stopping up or alteration of the existing access roads, with an increase in journey length and travel time. The report does not identify any proposed mitigation for those properties where the scheme will affect viability. For example, what action will be taken if the owner and/or occupier of the property deems the future use will not be viable and the preferred option would be compulsory purchase.</p> <p>Recommendation The ES should provide greater clarity on the causes of the potential impacts and assessment, particularly in relation to explaining the causes of severance and viability. Further communication with the owners /occupiers of the affected properties should continue and the assessment reviewed in light of their responses.</p>	ES Chapter 12 Population and human health (Document Reference 6.2) provides an assessment in accordance with DMRB LA112 Population and human health as appropriate. Landowner engagement with any associated negotiation or compulsory purchase is ongoing taking into account the likely impacts of the scheme which remain under discussion.	N/A

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		The ES should clearly address planned mitigation and report on residual effects.		
118	UK HEALTH SECURITY AGENCY	<p>Vulnerable populations/ sensitive receptors An initial approach to the identification of sensitive receptors has been provided, in accordance with LA112 and does include some of the protected characteristics within an Equality Impact Assessment (EqIA). Any EqIA produced to support the application for the DCO Project will assess the potential for effects to be disproportionately or differentially experienced by groups with Protected Characteristics as defined by the Equality Act 2010.</p> <p>The impacts on health and wellbeing and health inequalities of the scheme may have particular effect on vulnerable or sensitive populations, including those that fall within the list of protected characteristics. The Environmental Statement and any Equalities Impact Assessment should not be completely separated.</p> <p>Table 12-18 identified population sensitivity at each ward and Table 12-17 details population vulnerability. It is not clear, however, how the findings of Table 12-18 have been derived, particularly where Table 12-17 indicates high vulnerability, yet table 12-18 assigns a low sensitivity. This is particularly relevant where wards have a high vulnerability due to age against health determinants in Table 12-18, such as access to health care or transport.</p> <p>Recommendation The assessments and findings of the Environmental Statement and any Equalities Impact Assessment should be cross referenced between the two documents, particularly to ensure the comprehensive assessment of potential impacts for health and inequalities and where resulting mitigation measures are mutually supportive.</p> <p>The final ES must identify additional mitigation measures identified as necessary in connection to vulnerable populations and those within the protected characteristics. The ES should clearly explain how ward sensitivity has been determined, particularly where ward vulnerability has been assessed as high.</p>	<p>ES Chapter 12 Population and human health (Document Reference 6.2) addresses this matter and ward sensitivity, and vulnerability is defined and explained within ES Table 12-18. Cross references between the EqIA (Document Reference 7.5) and the ES (Document Reference 6.2) have been made in both documents as appropriate.</p> <p>ES Chapter 12 Population and human health (Document Reference 6.2) does not identify a requirement for mitigation in relation to health outcomes which are assessed as wither neutral or positive at population level. During design evolution, vulnerable groups have been accounted for and design changes have been made to reduce impacts. For example, access requirements for Somerset Progressive School resulted in design changes to account for the vulnerable users.</p>	N/A
119	Western Power Distribution	<p>General It is imperative that the Applicant continues to engage with WPD's representatives at this stage to ensure that WPD's assets are sufficiently protected from the development to be authorised under the Order and that, if necessary, any diversion of WPD's assets can be accommodated within the Order Limits. As the licensed electricity distributor for the South West, WPD must ensure that its statutory rights and duties pursuant to the Electricity Act 1989 are protected. Following these initial discussions, we will then be in a position to progress an Asset Protection Agreement between WPD and the Applicant.</p>	National Highways previously engaged with Western Power Distribution and since have continued to engage with National Grid Electricity Distribution through the development of the design and will continue following submission of the DCO application.	Yes
120	Western Power Distribution	<p>General We act on behalf of Western Power Distribution (South West) plc ("WPD") in responding to various letters received from National Highways (the "Applicant") dated 6 October 2021, 26 October 2021 and 2 November 2021. By way of this correspondence, the Applicant has requested information from WPD concerning its interests in land within the proposed Order Limits of the draft development consent order for the A358 Taunton to Southfield scheme (the "Scheme"). WPD understands that the Scheme will impact WPD's assets at a number of locations along the Scheme's proposed route. In the interests of providing you with the requested information, WPD is in the process of producing a combined land plan which identifies WPD's assets overlayed against the land plans provided by the Applicant for the draft Order. We will then provide this combined land plan to you for the purpose of assisting the Applicant with the land referencing exercise which the Applicant is required to carry out in relation to its application for the Order. We understand that the Applicant has already engaged with WPD for the purpose of discussing technical design matters in relation to the impact of the Scheme on WPD's assets and the potential for a number of diversions. WPD requests that the Applicant continues to liaise with WPD's Taunton office for the purpose of progressing discussions on any diversions and/or relocation of WPD's assets in</p>	National Highways confirms it previously discussed technical design matters with Western Power Distribution and since have continued to engage with National Grid Electricity Distribution in relation to diversion of National Grid Electricity Distribution assets and these are included within the scheme proposals as part of the DCO application. National Highways have received a land plan as part of C4 discussions. See Statement of Commonality for further details (Document Reference 7.3).	Yes

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

Row ID	Organisation	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		respect of the Order. In the event that the Applicant has any questions with regards to the impact of the Scheme on WPD's assets, it should contact WPD's representative, Darren Willes, at DWilles@westernpower.co.uk or 01823 348508 to discuss further.		
121	Western Power Distribution	<p>General</p> <p>In the event that the Applicant requires WPD to carry out any diversion of WPD's assets in relation to the Order, such diversions will need to be accommodated within the Order Limits. This is required to ensure that WPD has sufficient rights to carry out the diversion works and, once completed, allow WPD to maintain and access its assets in accordance with its undertaking. We also understand that new electricity connections may be required in relation to the Scheme and, for the avoidance of doubt, these connection works would need to be included within the Order alongside the diversion or relocation of any of WPD's assets. We would be grateful if you could kindly confirm that the Scheme has been designed with this in mind.</p>	<p>National Highways confirms it previously discussed technical design matters with Western Power Distribution and since have continued to engage with National Grid Electricity Distribution in relation to existing connections and provision of / diversion of assets and these discussions have informed the setting of the order limits around proposed diversions.</p> <p>New electricity connections are also required for the scheme and National Grid Electricity Distribution have provided quotes for the provision of these. All new connections will be within the Order Limits, to be located within National Highways land, and in most cases, within the highways-third party boundary fence line.</p> <p>Some new connections may require wayleaves as National Grid Electricity Distribution's enabling works may be required to take place within third party land, which may fall outside of the Order Limits, although these instances (if any) will be kept to a minimum.</p> <p>National Highways to date have not received details of instances where wayleaves would occur as we have only engaged with National Grid Electricity Distribution for budget estimates as part of the preliminary design stage. Following completion of their works, National Grid Electricity Distribution would be expected to access and maintain many of their supplies from the non-highways side of the boundary fence.</p>	Yes

Table 5.2A Summary of the matters raised by section 42(1)(a) prescribed consultees in response to the 2021 statutory consultation and the National Highways response

**Table 5.2B Summary of the matters raised by section 42(1)(a) prescribed consultees (Parish Councils) in response to the 2021 statutory consultation and the National Highways response**

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
1	Ashill Parish Council	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout	The Ashill Parish Council strongly advise National Highways and the Government to urgently dual the Ilminster Bypass to reduce the number of fatal accidents happening on this very dangerous stretch of road.	National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.	No
2	Ashill Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Henlade is in desperate need of a Bypass, to help protect the health and the wellbeing of all the residents who live along this very congested, air polluted and noisy road.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalton and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
3	Ashill Parish Council	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	Henlade MUST have a Bypass, and it is long overdue.		N/A
4	Ashill Parish Council	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	The question MUST be for Henlade, can they still have a Bypass if a decision is made by National Highways or the Government to change or cancel any part of the A358 dualling proposal?		N/A
5	Ashill Parish Council	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	4) The Kenny bridge link would also provide an access between Stewley and Ashill for Horse riders, walkers, cyclists and DISABLED USERS. The current Ashill village activities have not been taken into account, and from what the Parish Council can see on the proposed A358 Dualling, the proposed changes have not been well thought through or have been missed off.		Stewley link replaces an overbridge at Kenny (previously seen in the Preferred Route Announcement). Sunnyside underpass would provide an alternative scheme crossing for walkers, cyclists and horse-riders. This would be a better amenity than Kenny Road bridge because it would be traffic-free, safer and more pleasant to use.
6	Ashill Parish Council	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	Statement National Highways must make sure that the current Ashill village healthy living environment is maintained, and a total commitment is given to achieving it. A LARGE INCREASE in speeding traffic movements through the village will definitely affect these healthy living activities and make them more dangerous to continue enjoying.	National Highways acknowledges concern related to the forecast rise in traffic flow through Ashill with the proposed A358 scheme in place. During the 2021 statutory consultation, it was noted that there was concern about the rise in traffic flow forecast through the village of Ashill. As a result, National Highways proposed design changes along the Old A358 through Ashill which would reduce driver speeds and therefore improve safety for all road users. The changes proposed are to narrow the road, build sections of kerbs or footways into the road and improved pedestrian crossing facilities at several locations through the village as well as enhancing road signing and marking. These measures have been agreed in principle with Somerset Council, however further work is required to agree aspects such as the detailed design and construction specification. These measures would reduce driver speeds and therefore improve safety for all users.	Yes
7	Ashill Parish Council	Do you have any other comments you would like	The Ashill Parish Council can not understand why such a road of this high spec, costing a lot of money and taking	The scheme will resolve the existing congestion issues in Henlade and at Southfields Roundabout and will provide a continuous high quality dual carriageway along the strategic A303 / A358 corridor, with safe overtaking opportunities along the length of the A358	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		to make about our proposals?	up a lot of costly greenfield farming land has to be built along the A358 road.	between M5 junction 25 and Southfields roundabout. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358 and significantly reducing the likelihood of head on collisions. The need for and benefits of the scheme are detailed in Chapter 4 Transport case and Chapter 5 Economic case, of the Case for the Scheme (Document Reference 7.1).	
8	Ashill Parish Council	Do you have any other comments you would like to make about our proposals?	Somerset is a rural county, and a more environmental friendly road with a lot less impact on the people who live along the current A358 would have been well supported.	National Highways acknowledges the need to integrate the scheme design within its rural context, and to minimise adverse impacts on the local environment. The Environmental Statement (ES) (Document Reference 6.2) sets out how the scheme design has had regard to environmental issues of importance.	N/A
9	Ashill Parish Council	Do you have any other comments you would like to make about our proposals?	I hope the Government's Transport Minister finds time to study very carefully what is being proposed and turns it down.	The scheme is a Nationally Significant Infrastructure Project (NSIP) and National Highways is seeking a Development Consent Order (DCO), which involves making an application to the Planning Inspectorate. The Planning Inspectorate must prepare a report on the application to the relevant Secretary of State (for Transport), including a recommendation, within three months of the close of the six-month Examination stage. The relevant Secretary of State then has a further three months to make the decision on whether to grant or refuse development consent. Further information is available online here: <a href="https://infrastructure.planninginspectorate.gov.uk/application-process/the-process/">https://infrastructure.planninginspectorate.gov.uk/application-process/the-process/</a>	N/A
10	Ashill Parish Council	Do you have any other comments you would like to make about our proposals?	The local people all know, it is Henlade and the Ilminster Bypass that are the two big problems, and until Henlade is sorted and the Ilminster Bypass is dualled nothing will change, and the sad thing is more people who don't know the Ilminster road's failings will be fatally injured.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.  National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.	No
11	Ashill Parish Council	Do you have any other comments you would like to make about our proposals?	I know all the Parishes fully support Henlade wanting the Bypass, which they fully deserve.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
12	Ashill Parish Council	Please let us know if you have any comments on our proposals for construction, including the proposed phasing.	The proposed A358 Dualling is well over-spec'd and extremely costly compared to the type of road that would easily sufficed from Southfield Roundabout to the M5 junction.	The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in ES Chapter 3 Assessment of alternatives of the Environmental Statement ((Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.	No
13	Ashill Parish Council	Please let us know if you have any comments on our proposals for construction, including the proposed phasing.	Throughout the National Highways planning meetings, the Ashill Parish Council kept getting the feeling that the health & safety and the wellbeing of all who live along the rural A358 road was always at the back of their minds. This is proving to be so now, when you look at the A358 Dualling proposal.	The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in ES Chapter 12 Population and human health (Document Reference 6.2)	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
14	Ashill Parish Council	Please let us know if you have any comments on our proposals for construction, including the proposed phasing.	The Henlade Bypass is a MUST and should start as soon as possible. An additional full junction east of Hatch Beauchamp providing access both to and from both east and west bound carriageways. This will mitigate many local issues and will result in considerably more support from local residents than at present.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.  Traffic modelling indicates that an additional junction east of Hatch Beauchamp with slip roads allowing access to and from Hatch Beauchamp would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	No
15	Ashill Parish Council	Please let us know if you have any comments on our proposals for construction, including the proposed phasing.	The Ashill Parish Council thinks the consultation period was far too short for a major project like this, and a lot of people living along this proposed dualling still do not fully understand and appreciate what the changes mean to them. The Parish Councils must be given another opportunity to communicate out to all the residents who were not able to attend the meetings, due to either sickness or travel difficulties. We know that most of the Parishes think that the consultation timing was badly planned. The Ashill Parish Council found that a lot of help was being requested from the residents who wanted to respond but did not know how to.	The consultation period for this project lasted 41 days, which exceeded the minimum requirement for NSIPs which is 28 days. This extended period took into account the school holidays. Furthermore, events and webinars were scheduled to avoid school holidays.	N/A
16	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	The Parish Residents have found this report quite difficult to digest, and are asking more about the additional miles that they will have to travel and what impact does it have on the environment. Also, what would be the effect on the houses that are to be built very close to the new junction, regarding noise and air pollution.	With regards to after the scheme, National Highways has undertaken traffic modelling on the proposed scheme which includes the local roads surrounding the proposed A358 scheme. The models show that, after construction, most of the journeys that local traffic make see an improvement in journey time with the scheme in place. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).  The effects of air quality and noise are detailed in ES Chapter 5 Air quality and ES Chapter 11 Noise and vibration (Document Reference 6.2).	N/A
17	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	This question is, the new proposed road to Broadway, from the Ashill new junction, runs along part of a field where a planning application has been approved for 25 Houses. The surface water run off from this field has nowhere to go other than onto the public highway. Has this all been taken into account 17/03800/OUT ? The Parish Council would like more information on the following matter, which is showing on the proposed plans for the Ashill junction, the number of attenuation ponds? But in the Preliminary Environmental information Report it does not state how many.	The proposed drainage proposals for the scheme are based on capturing and containing surface water generated by hardstanding areas and attenuating them down to existing rates of runoff (greenfield runoff rate). The design principles mean that the rate of discharge from the new hardstanding will not increase flows from the existing highway drainage network where this is utilised. If the proposed development is proposing to discharge to an existing highway drainage network, this will only be permissible if express permission has been sought from the Highway Authority and the development will have to restrict discharge from their development areas to existing greenfield runoff rate. The design of the proposed drainage system for the A358 has been undertaken in close consultation with Somerset Council acting as the Lead Local Flood Authority and the Highway Authority.	N/A
18	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	There appears to be a disproportionate amount of concern for the protection of wildlife, in comparison to human beings whose lives will be blighted by increased traffic and consequent impact on their physical health, mental health and safety. If bridges are to be made available for badgers, why are sufficient access points not being made for the human species whose journeys will increase by up to 5 miles to be able to cross from one side of the new road to the other? Whilst we are aware of the need to conserve wildlife, I have to ask who is going	The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in ES Chapter 12 Population and human health (Document Reference 6.2)  National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow and woodland habitat creation. These areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			to train the dormice, butterflies, badgers, newts and bats to utilise the alternative routes being devised for them?	creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358.  As highlighted, additional measures have been incorporated into the scheme to facilitate the safe movement of wildlife. This includes mammal ledges within culverts and underbridges in key locations to encourage the mammal passage beneath the scheme even in times of flood, badger tunnels would be incorporated where key badger movement corridors have been identified, and dormouse bridges would be used to maintain safe connection between dormouse habitats on either side of the scheme. The habitat creation areas have been designed, in combination with appropriate ecological fencing, to direct wildlife towards tunnels, culverts and underbridges as appropriate.	
19	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	The Parish Council would like to understand a lot more about what the report is truthfully indicating, but the short consultation timescale has not allowed for this.	A number of documents were made available in addition to the Preliminary Environmental Information (PEI) Report, both digitally and in print, as well as in accessible formats such as easy-read and braille. These documents included a non-technical summary of the PEI Report, the consultation booklet, and a non-technical summary of the traffic technical note. These were provided to ensure that people could view and engage with as many of the materials as possible during the consultation period, at different levels of expertise and/or interest.  National Highways also provided a range of activities throughout the consultation period including in-person events, webinars and webchats, to ensure the consultation was accessible and ensure it was easy for people to view proposals and ask questions of the team.  The consultation period lasted 41 days, which exceeded the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days.	N/A
20	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	Questions a) Does the report fully support National Highways proposed dualling scheme with all its environmental difficulties?	The Environmental Impact Assessment (EIA) uses a set of nationally accepted methodologies to assess the potential environmental implications of the scheme on the environment. For the environment, these methodologies define the study area to be used for each discipline, and for biodiversity, each species. These areas provide a nationally consistent approach to assessing the environmental implications of Nationally Significant Infrastructure Projects and they have been consistently utilised in this project.	N/A
21	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	Questions b) Are there any environmental recommendations that National Highways can't deliver or consider because of additional cost?	The Environmental Impact Assessment (EIA) uses a set of nationally accepted methodologies to assess the potential environmental implications of the scheme on the environment. For the environment, these methodologies define the study area to be used for each discipline, and for biodiversity, each species. These areas provide a nationally consistent approach to assessing the environmental implications of Nationally Significant Infrastructure Projects and they have been consistently utilised in this project.  The environmental mitigation proposed is that required to mitigate the impacts of the scheme in line with current standards and guidance.	N/A
22	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	Questions c) Have there been any suggested changes made to National Highways to save costs?	National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including transport users, road safety, wider area impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to see whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient to support delivery. This is reviewed at every stage of work to see whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the DCO is granted.	N/A
23	Ashill Parish Council	Please let us know if you have any comments on the information presented in the	Questions d) The current surface water run off from the Ashill village, being on a hill, has always been a major problem,	The proposed drainage proposals for the scheme are based on capturing and containing surface water generated by hardstanding areas and attenuating them down to existing rates of runoff (greenfield runoff rate). Therefore, surface water generated by any additional hardstanding is controlled to pre-development runoff rates. Furthermore, existing surface	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Preliminary Environmental Information (PEI) Report.	and with the four approved housing developments the village run off is planned to increase by about 35%?	water flow routes have been taken into account to ensure surface water is not inadvertently directed towards sensitive receptors.	
24	Ashill Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	<p>Questions</p> <p>e) Has anybody looked at what might be the impact on the drainage systems that National Highways are proposing to manage surface water drainage to the East and the West of the Ashill village, or has this been totally overlooked in their calculations?</p>	The proposed drainage proposals for the scheme are based on capturing and containing surface water generated by hardstanding areas and attenuating them down to existing rates of runoff (greenfield runoff rate). Therefore, surface water generated by any additional hardstanding is controlled to pre-development runoff rates. Furthermore, existing surface water flow routes have been taken into account to ensure surface water is not inadvertently directed towards sensitive receptors.	N/A
25	Ashill Parish Council	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area	<p>Option 1 - Provide a connecting link road between Capland Lane and Village Road. The Parish Council believes the connection to Village Road would more than help the residents of Stewley, and it MUST be connected to keep the travel mileage as low as possible.</p> <p>As we all know, climate/pollution/green incentives are top of the Government's priority list, and any reduced mileage will definitely help towards delivering the targets being asked of us.</p> <p>What National Highways are proposing definitely increases mileage pollution and energy usage, this cannot be acceptable to helping the Government achieve their future climate change targets.</p> <p>The Ashill Parish Council is asking that the Transport Minister picks this up when making the Government's final decision.</p> <p>Statement We all know that travelling any additional miles, and at higher speeds, uses more energy, and the Parish Council finds it hard to believe that this is not even being considered for the proposed A358 Dualling scheme.</p>	<p>Following statutory consultation feedback, National Highways has amended the scheme design to include a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.</p> <p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with high volumes of fast-moving traffic on the A358.</p> <p>Checks on journey times between local villages and both the M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. These show that generally there are reductions in overall journey times due to the improvements in travel speeds offered by the scheme, although a small number of trips will result in slightly longer journey times. Details of these impacts were shared as part of the webmaps created as part of the supplementary consultation. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.</p> <p>The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).</p> <p>National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.</p> <p>National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the PEI Report considered impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). This assessment has also been updated within ES Chapter 14 (Document Reference 6.2), which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the EIA Regulations and concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.</p>	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
26	Ashill Parish Council	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	<p>The Parish Council and the residents want an ON / OFF Hatch Village road junction, to allow the properties along the old A358 route to access the New A358 Dualling road, and not have to travel around dangerous roads and lanes to complete their everyday journeys.</p> <p>Stewley / Capland could also access the New A358 road if the link to Village Road from Capland is re-instated.</p>	<p>Traffic modelling indicates that an additional junction east of Hatch Beauchamp with slip roads allowing access to and from Hatch Beauchamp would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.</p> <p>Following statutory consultation feedback, National Highways has amended the scheme design to include a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.</p>	No
27	Ashill Parish Council	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	<p>The Ashill Parish Council's point of view is that the Kenny link bridge to Stewley Road is a MUST.</p> <p>This is a definite requirement expressed by the Stewley residents, a lot of who have young children at the Ashill Primary School.</p> <p>Only having the one safe planned route out is not acceptable and it would cause a major problem, not only for the people living in Stewley, but also for the emergency services.</p> <p>1) The Parish Council cannot accept what National Highways is planning for the Stewley residents, and would like to see the Kenny link bridge re-instated. 2) The National Highways proposal shows that you are splitting the Ashill Parish in two, that is not acceptable for our rural village and you MUST change what you are proposing. The new road from Stewley to the Ashill Junction, picking up the sewage plant and the Park Barn road issue, MUST be changed. 3) The Parish Council would like to see the original proposal Kenny link bridge re-instated, with the sewage plant being serviced by a service road, and the Park Barn Lane connected into the Rapps new road. The Kenny link bridge would make sure that the Stewley residents are still attached to the Ashill Parish.</p>	<p>The proposed Stewley link road will allow traffic from Stewley to access Ashill village via the proposed overbridge at the Ashill junction. The amount of traffic that would use Kenny overbridge would not justify its inclusion in the scheme design, given that there will be overbridges at Village Road and at the Ashill junction that will allow traffic to cross over the A358.</p> <p>Following statutory consultation feedback, National Highways has amended the scheme design to include a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.</p>	Yes
28	Ashill Parish Council	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users? Please let us know the reasons for your response	The Ashill Parish Council believe it is for the local Parish Councils to make reference to this proposal.	National Highways acknowledges this comment.	N/A
29	Ashill Parish Council	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Difficult to comment on, it should be the parish council for the Henlade area that must make reference to it.		N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
30	Ashill Parish Council	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	Again, we think this is for the Parish Councils and their Parishes, who are affected by the proposed changes to make comments on.		N/A
31	Ashill Parish Council	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	Again, we think this is for the Parish Councils and their Parishes, who are affected by the proposed changes to make comments on.		N/A
32	Ashill Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	The Parish Council has already made reference to this proposal.  We are insisting that National Highways re-instate the Kenny link bridge, as per their early proposal.  The Parish Council and the Ashill residents do not want Stewley split away from the Ashill Parish.	The proposed Stewley link road will allow traffic from Stewley to access Ashill village via the proposed overbridge at the Ashill junction. The amount of traffic that would use Kenny overbridge would not justify its inclusion in the scheme design, given that there will be overbridges at Village Road and at the Ashill junction that will allow traffic to cross over the A358.	No
33	Ashill Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	The Ashill Parish Council fully supports this proposal.	National Highways acknowledges the support received in relation to the design proposals.	N/A
34	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing	Again, we think this is for the Parish Councils and their Parishes, who are affected by the proposed changes to make comments on.	National Highways acknowledges this comment.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response			
35	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	The Ashill Parish Council fully supports this proposal.	National Highways acknowledges the support received in relation to the Southfields roundabout design proposals.	N/A
36	Ashill Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	The proposed Ashill junction showing on the plans is far too big and takes up a lot of greenfield farm land, which must have a large cost implication in compensation payments.	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor. As part of the scheme, National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions. The proposed junction at Ashill comprises of a 'diamond' arrangement which is a standard all movements grade-separated junction type in accordance with the Design Manual for Roads and Bridges (DMRB), which are the design standards for use on the strategic road network.  As part of the development of the scheme design and environmental mitigation, National Highways has sought to minimise land-take wherever possible.	No
37	Ashill Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Summary of Issues for Rapps: 1) Closure of Cad Road will cause more than doubling of traffic going through Rapps on unsuitable roads. This traffic is heavy (farm and industrial) and causes risk to life and property 2) Dualling and increase in speed of A358 greatly increases noise pollution between Ashill and Southfields, with no mitigation to the East so far planned. 3) The Parish Council, and the residents of Rapps, have great concerns regarding the closure of Cad Road and the amount of additional traffic that will have to use the Rapps route from the new junction, to travel to and from Ilton, the business parks and the outlying villages. 4) Rapps is already a fast stretch of road, and the residents are worried that with a lot more traffic being proposed to use it, there will be a large increase in vehicles continuing to break the 40mph speed limit that is currently in place. It will become an even more dangerous stretch of road with inevitable risks to life and property 5) A lot of commercial vehicles currently use Cad Road. National England are proposing these commercial vehicles will in future have to travel the Rapps route, making this stretch of road even more dangerous. The road is currently not wide enough for two large commercial vehicles to pass each other safely, without one having to pull over, often very close to some of the residents' properties.	National Highways has undertaken an assessment of mitigation measures that are likely to be required on local roads as a result of the traffic impacts of the scheme. The standard of Rapps Road is such that it provides sufficient capacity to accommodate the forecast increase in traffic volumes. HGVs make up only around 2% of overall traffic volumes along Rapps Road and the speed limit through Rapps is 40 mph. Personal injury accident records along Rapps Road shows that there have been no accidents resulting in casualties on the sections that would remain unchanged as part of the scheme for at least 20 years. The location where there have been personal injury accidents along Rapps Road is at the junction with the A358, which would be closed and replaced with a much safer grade-separated junction as part of the scheme.  The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in ES Chapter 11 Noise and Vibration (Document reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of cuttings, noise bunds and other physical features to reduce noise impacts during operation. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed.  Businesses based on Cad Road would access the A358 via Rapps Road and Ashill junction. It has been identified that the junction of Cad Road and Rapps Road could be improved for larger vehicles associated with business/farming activities wishing to turn left onto Rapps Road. Therefore, widening is proposed as part of the scheme in this location with improved junction visibility. The existing carriageway width on Rapps Road is considered suitable for two-way traffic.	No
38	Ashill Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Detail on Specific Issues for Rapps: 6) Rapps lies across open farmland from the A358, currently a 2-lane, 60mph limit road. With the increase to 4 lanes (6 if you include the Broadway road) and increased speed limit to 70mph, then noise levels can be expected to dramatically increase especially as the	The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Chapter 11 Noise and vibration of the Environmental Statement (Document reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of cuttings, noise bunds and other physical features to reduce noise impacts during operation. National Highways has also produced an Environmental Management Plan (Document Reference	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			prevailing wind is from the South West. We anticipate a huge noise impact for residents of Rapps.	6.4, Appendix 2.1), which explains how the impact of construction activities will be managed.  The location of noise bunds and barrier are shown on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3).	
39	Ashill Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	The Parish Council and the Rapps residents would like National Highways to consider: 7) Cad Road should be kept open even if only as “access to” the A358 (ie it would be acceptable to prevent access “from” the A358). Industrial traffic tends to informally use Cad Road/Rapps Road as an unofficial one way route to avoid the above issues of having to pass each other on narrow roads and this would enable this to continue.	The National Highways delivery plan for 2020 – 2025 confirms that we’re committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions. Traffic modelling indicates that additional junctions / accesses, in addition to those proposed at Mattock’s Tree Green and Ashill, would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	No
40	Ashill Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	The Parish Council and the Rapps residents would like National Highways to consider: 8) Traffic calming measures on Rapps Road to reduce speed through the narrow lanes.	National Highways has undertaken an assessment of mitigation measures that are likely to be required on local roads as a result of the traffic impacts of the scheme. The standard of Rapps Road is such that it provides sufficient capacity to accommodate the forecast increase in traffic volumes. HGVs make up only around 2% of overall traffic volumes along Rapps Road and the speed limit through Rapps is 40 mph. Personal injury accident records along Rapps Road shows that there have been no accidents resulting in casualties on the sections that would remain unchanged as part of the scheme for at least 20 years. The location where there have been personal injury accidents along Rapps Road is at the junction with the A358, which would be closed and replaced with a much safer grade-separated junction as part of the scheme.	No
41	Ashill Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	The Parish Council and the Rapps residents would like National Highways to consider: 9) Noise cancellation methods should be adopted from the Ashill junction to the Southfields junction on the eastward side. There seems to be none planned and the lack of these measures could be of significant detriment to residents.	The scheme will include a low noise surface to minimise noise generation in all locations. Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. Where individual residential properties are still predicted to be exposed to noise increases above the thresholds set out in the Noise Insulation Regulations 1975, they may qualify for a package of noise insulation measures (glazing and ventilation) to minimise noise ingress to their property. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement (ES) Chapter 2 The project and within Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barrier are shown on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3).	No
42	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	National Highways mission statement is:- “Our mission is to keep the South West connected to the rest of the world. By maintaining and developing our roads, we connect people and communities. National Highways and the Government has a duty of care to make sure that people living in this rural area of Somerset are kept safe when going about their daily lives, and not being impacted on by the major A358 Dualling development proposal, for the following reasons.  1) National Highways MUST change the proposed flyover from the old A358 onto the Hatch Beauchamp Village Road to a flyover, with an ON/OFF slip road junction. The reason for the Ashill Parish Council's request is to make	National Highways acknowledges the need to ensure residents of rural Somerset are kept safe and the scheme includes proposals for measures on the local road network to ensure that this will be the case.  Traffic modelling indicates that an additional junction east of Hatch Beauchamp with slip roads allowing access to and from Hatch Beauchamp would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			sure current traffic movements around these very narrow and dangerous village roads are not increased and still kept to a minimum. National Highways MUST take into account that the local roads are in an extremely poor condition and traffic movements must still be kept to a minimum, to stay safe enough for all those living along them who cannot avoid having to use them.		
43	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	2) Ashill Village, with young families and pets, are living in a very safe environment. National Highways MUST reconsider the proposed village road junction arrangement along the new A358 Dualling route. If National Highways fails to recognise the abovementioned, Ashill will be greatly affected by the large increase in vehicle movements being proposed travelling through this small village.	National Highways acknowledges concern related to the forecast rise in traffic flow through Ashill with the proposed A358 scheme in place. During the 2021 statutory consultation, it was noted that there was concern about the rise in traffic flow forecast through the village of Ashill. As a result, National Highways proposed design changes along the Old A358 through Ashill which would reduce driver speeds and therefore improve safety for all road users. The changes proposed are to narrow the road, build sections of kerbs or footways into the road and improved pedestrian crossing facilities at several locations through the village as well as enhancing road signing and marking. These measures would reduce driver speeds and therefore improve safety for all users.  Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	Yes
44	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	3) The Parish Council would like to remind National Highways that the Ashill Bypass was built to make it safer for all who now enjoy living in Ashill. The proposed A358 Dualling will mean the local residents have to travel around these very dangerous roads, as well as having to travel many extra miles to complete their everyday living journeys.	The forecast traffic model developed by National Highways indicates that there would be an increase in traffic through Ashill village and through Kenny as a result of the A358 scheme. The road through Ashill was the Old A358 before the Ashill bypass was built. It is of single carriageway standard and was originally designed to accommodate significantly higher traffic volumes than currently use it. Personal injury accident records do not highlight a safety issue in and around Ashill village. There have been no personal injury accidents along the Old A358 through Ashill since 2007, apart from at the junction with the A358 mainline which will be closed as part of the proposed A358 scheme. The A358 scheme will not lead to significant increases in overall trip mileage for journeys to and from communities local to the A358 corridor.	No
45	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	4) Hatch Beauchamp has at least two large businesses in its village, including Weavo Fencing and Unicorn Saddlery. Customers and deliveries using the businesses in Hatch Beauchamp and travelling from an Easterly direction would, without the Hatch Beauchamp ON / OFF junction travel through the Village of Ashill to access them. Large commercial vehicles, horse boxes, vans and car trailers would be travelling through the Ashill village, and this cannot be right for the Ashill residents to have to change their current safe way of living by going back to a very busy dangerous road again. The Parish Council and the residents cannot see the business customers and the delivery vehicles travelling all the way to Mattocks Tree Green to access these industrial sites. Hatch Beauchamp is quite similar to Ilton's business parks, but on a smaller scale.  National Highways should not be planning for Ashill to support these business by proposing that the large vehicle movements should travel through the village on a daily / weekly basis.	Despite the increase in traffic through Ashill that is forecast as a result of the scheme, the traffic volumes on the road will remain low at around 150 vehicles per hour during the busiest peak hours of a typical day in 2046, which is the equivalent of 2 to 3 vehicles per minute during the busiest time of day. Mitigation measures included in the design on the road through Ashill will enhance safety by adding physical changes to the road layout that will help manage travel speeds through the village.	Yes
46	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the	Statements 1) The long straight road through the village was one of the most dangerous stretches of road along the old A358, and we saw a number of people losing their lives in Ashill. Once the bypass was built, it was not long before SSDC approved two developments along this road. There are now a further FOUR HOUSING	Traffic levels on the road through Ashill would be significantly lower with the A358 Taunton to Southfields Dualling Scheme in place than they were before the Ashill Bypass was built. The much higher traffic levels prior to the construction of Ashill bypass would have led to dangerous overtaking manoeuvres and conflicting movements associated with turning movements to and from side roads and property accesses that would have contributed to the accidents and fatalities referred to in the comment. Personal injury accident records show that the most recent accident that led to an injury on the old A358 through Ashill	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		reasons for your response	<p>DEVELOPMENTS APPROVED and waiting to be built, all including affordable homes for young families. The two most recent developments brought a big increase in cars being parked along the village road, and we are sure this will continue to increase when more houses are built.</p> <p>The village also supports a large number of established wildlife, such as badgers, roe deer, foxes and hedgehogs, who regularly cross this road in various places, along the old road. Ashill has also seen a large increase in walkers, dog walkers, cyclists, and horse riders, and we do have an equestrian centre in Windmill Hill. Cats are also regularly seen crossing the road. Once these new housing developments have been built, there will be an increase in children walking to school and to the playing field, and parents taking their children to school have to park along the main village road in the mornings and afternoons.</p> <p>The Parish Council have been made aware that the Primary School is extremely worried about this matter.</p>	<p>occurred in 2007. The increase in traffic from approximately 1 vehicle per minute to 2-3 vehicles per minute will not fundamentally impact road safety as the volumes are not comparable to the level of traffic that used to use the road through Ashill in the situation referred to in the comment.</p> <p>Development of settlements and housing is determined by the local planning authority; current planning policy in Somerset supports the delivery of the A358 Taunton to Southfields to unlock strategic growth in the county. This is also set out in the Case for the Scheme (Document Reference 7.1).</p> <p>ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2) includes an assessment of the effects of the scheme cumulatively. Any other developments that have already been delivered and are currently operational are considered as part of the environmental baseline within the environmental topic chapters of the ES (Document Reference 6.2).</p>	
47	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	<p>Statements</p> <p>2) During the winter, when the weather is bad, the School regularly uses the Village Hall for their PE (as they have no other indoor facility) and children have to cross our road to access the Hall. The crossing is in a blind spot area and already quite dangerous, so with the additional volume of traffic, especially involving commercial vehicles travelling to Hatch Beauchamp's businesses, it would make it even more dangerous for them to access the Hall. The winter also brings another dangerous condition on the road through Ashill, the village is on a hill and the road easily floods, and if the temperatures are very low it freezes over. Ashill is not on the Council's gritting programme, so we see a number of accidents every year, especially when parents are taking their children to school early in the morning. If National Highways' proposed new A358 Village Road junction arrangement is approved, the additional heavy traffic being proposed to travel along the Ashill road will only make it more dangerous and life-threatening for everyone.</p>	National Highways' mitigation proposals in Ashill include improved crossing facilities for pedestrians crossing the road through the village. The safety concerns highlighted around flooding and lack of gritting in winter are matters to be discussed with Somerset Council who are the local highway authority for the road as these are existing issues not related to the A358 scheme.	Yes
48	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	<p>Statements</p> <p>3) Between Mattocks Tree Hill (Thornfalcon traffic lights) and Southfields roundabout National Highways are proposing to remove 18 junctions /accesses to the A358 and replace these with 1 new one at Ashill, plus a network of roads linking local villages, but not connecting to the new Dualled A358. Therefore, all traffic travelling to and from Ilminster, Ilton, Chard, the South Coast or the A303 from Hatch Beauchamp, Curry Mallet, Bickenhall, Curland, Staple Fitzpaine, Windmill Hill and Wood Road will find the route through the village of Ashill the most convenient. The consequences of the proposed increased in traffic travelling through Ashill will be disastrous for the residents and their current daily activities, the School children and their parents, and the Hall's very busy hire programme, which sees cars being</p>	Despite the increase in traffic through Ashill that is forecast as a result of the scheme, the traffic volumes on the road will remain low at around 150 vehicles per hour during the busiest peak hours of a typical day in 2046, which is the equivalent of 2 to 3 vehicles per minute during the busiest time of day. Mitigation measures included in the design on the road through Ashill will enhance safety by adding physical changes to the road layout that will help manage travel speeds through the village.	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			parked along the village road once the small car park is full.		
49	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Statements 4) The cost of making the Hatch Beauchamp Village Road an ON /OFF Junction is a one off cost. The extra cost to the people living without this junction and having to travel the extra miles every day / week / year will be ongoing. With the climate/pollution/green incentives high on the government's priority list, it does not make sense that National Highways has not taken this into consideration within their planning models. I am sure that a lot of people would be very surprised, and disappointed, if they saw that a professional body like National Highways was not supporting the move forward to reducing pollution to help protect the country from climate change, which is reported to be heading our way.	Traffic modelling indicates that an additional junction east of Hatch Beauchamp with slip roads allowing access to and from Hatch Beauchamp would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.  When considering elements of the scheme, aspects such as environmental impacts, for example habitat loss or embedded carbon impacts, also need to be considered in addition to potential positive impacts on lowering road user emissions.	No
50	Ashill Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Statements 5) The Ashill Parish Council and the Ashill residents are insisting that National Highways change their proposed village road bridge to an ON / OFF junction, which would then go a long way to solving what is seen as a hugely important issue for a number of involved Parishes.	Traffic modelling indicates that an additional junction east of Hatch Beauchamp with slip roads allowing access to and from Hatch Beauchamp would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	No
51	Ashill Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Ashill Parish Council cannot see on the proposed A358 Dualling plans any real benefits for the Ashill Parish residents, particularly as a lot of public footpaths are being proposed to be closed. On one hand the Government is asking that we all try and live healthier lives, but you are proposing to take a lot of this walking activity away, by closing these footpaths. This is a very confusing message and hardly healthier living? We hope the Government takes this into their consideration when making their final decision.	The proposed improvements are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way (PRoW) Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4). An assessment of walking, cycling and horse-riding is provided in ES Chapter 12 (Document Reference 6.2). In summary, walkers on public footpaths in Ashill parish would be able to cross the scheme at Sunnyside underpass, Ashill junction or Jordans overbridge. All of these crossings would be safer than the existing at grade crossings. Two of the crossings would be traffic-free and classified as restricted byways and therefore be more inclusive than the existing footpaths. Linear provision for walkers, cyclists and horse-riders would be provided on both sides of the scheme in Ashill parish. On the western side, a restricted byway would connect Broadway Street and the old A358 at Horton Cross. On the eastern side, a new restricted byway would connect Rapps Road and Cad Road, and Cad Road would be largely traffic-free.	N/A
52	Ashill Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Re-instating the Kenny bridge link would bring a lot more benefits to the Ashill Parish walkers, cyclists, horse riders and DISABLED USERS. Many Ashill residents do travel over to Stewley, which has ideal conditions for the activities mentioned.	Stewley link replaces an overbridge at Kenny (previously seen in the preferred route announcement). Sunnyside underpass would provide an alternative scheme crossing for walkers, cyclists, horse-riders and disabled users. This would be a better amenity than Kenny Road bridge because it would be traffic-free, safer and more pleasant to use.	No
53	Ashill Parish Council	To what extent do you agree or disagree with our proposals for	A lot of public footpaths are being proposed to be closed, and National Highways must make a bigger effort to make sure that these rural activities are kept open for the	PRoW would be retained as much as possible but some diversions and stopping up are required. Only one footpath in Ashill parish would be fully stopped-up, which is CH 1/21 (Thickthorn Lane). An alternative route would be available via Ashill junction. A longer	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Ashill Parish residents, and the outside public who regularly visit the village to use our great facilities.	alternative would be via Jordans overbridge, which would be a traffic-free restricted byway and safer and more inclusive than the existing at grade crossings. Proposals are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way (PRoW) Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4).	
54	Ashill Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Statement National Highways MUST not be allowed to restrict these very important activities and take them away from the residents who are currently living and enjoying a healthy rural life, along with the visiting public.	The scheme objectives include an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. Proposals are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the PRoW Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4).	N/A
55	Ashill Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	The current M5 Junction can not cope with the volume of traffic already using it, especially around the summer holiday period and bank holidays.	Somerset County Council completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes.  As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the ComMA Report (Document Reference 7.4).	N/A
56	Beercrocombe Parish Council	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	Local parishes voiced their concerns at the lack of access to the scheme south of Hatch Beauchamp throughout the consultations that took place in 2019 and during 2021. Indeed the 2019 SAR included the requirement for a junction south of Hatch Beauchamp (Section 3e)(1) refers) but it was removed without any published analysis following a Highways' England Executive cost cutting exercise 5 that decided the scheme would proceed without any 'extras' like the Hatch Beauchamp junction. The Community of Parishes has continued to present proposals to mitigate the adverse impact of the scheme within this section.	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.	No
57	Broadway Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout?	BPC strongly disagrees with the limited changes proposed by NH at Southfields roundabout.	Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.</p>	
58	Broadway Parish Council	8 – General	BPC endorses the narrative of the Local Councils Group in its response, Principal Issues. Specifically, BPC believes that the Business Case for the scheme should be rewritten, Governance of the scheme must be reviewed, the failings of design which impact on local communities must be changed in ways already suggested to NH, Value for Money should be reviewed, since the current marginal benefit argues for a more modest and therefore cheaper scheme and the current consultation for a complex scheme has been too short.	<p>Local councils and business leaders agree that upgrading the rest of the A303/A358 corridor to dual carriageway would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p> <p>National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including transport users, road safety, wider area impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to see whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient to support delivery. This is reviewed at every stage of work to see whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the DCO is granted.</p> <p>The proposed Scheme is part of the Government's Road Investment Strategy 2 (RIS2), which identifies parts of the strategic road network which need upgrading to improve safety, connectivity, and reliability for its users. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the ComMA Report (Document Reference 7.4) This includes the scheme cost, the economic benefits and the benefit to cost ratio.</p>	N/A
59	Broadway Parish Council	Additional proposals at the roundabout	There is already significant congestion at peak and other times on each of the approach legs to the roundabout. No significant physical change to the roundabout itself is proposed by NH. However, the proposed creation of a third circulatory lane on parts of the roundabout would mean that traffic seeking to enter the roundabout from the B3168 (Ilminster) and A358 (South) approach legs would have to cross in front of 3 lanes of traffic rather than the current 2. This would create a significantly more challenging traverse of the roundabout for local vehicles than is currently the case with a lower volume of traffic than NH project for the future. To cope with this, the following additional measures are needed at the roundabout.	<p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.</p>	N/A
60	Broadway Parish Council	Background	BPC was a founder-member of the group of 10 (now 14) local councils (the Local Councils Group) who came together in 2019 to develop design solutions to the defects in the then Highways England's proposed A358 route. Early in 2021, the Councils' Group put a detailed set of mitigation measures to NH and has held several	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			meetings subsequently with its officials to hammer out better local access arrangements and to prevent the diversion of traffic through villages like Ashill and Hatch Beauchamp. NH has taken some of those proposals on board and they are reflected in the published consultation document. However, many of the Local Councils Group suggestions have not been accepted.	nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions. Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.	
61	Broadway Parish Council	Background	The Local Councils Group has submitted a detailed response to the consultation, setting out practical and safe design changes, but also challenging the engineering standards on which the proposed route is based. BPC endorses the Councils' Group's consultation response. What follows focusses on the issues of most importance to Broadway, using the numbering sequence in the feedback questionnaire. This response should be read in conjunction with the Local Councils Group response.	National Highways acknowledge Broadway Parish Council support for the Community of Parish proposals.	N/A
62	Broadway Parish Council	Conclusion	BPC wishes to continue to work constructively with NH in partnership with the Local Councils Group to secure an improved route between Southfields and the M5 which achieves national transport objectives while respecting and facilitating local communities' need for convenient and safe travel around their area. BPC believes that NH's statutory consultation proposals do not achieve this and should be replaced with a more modest dual carriageway route designed to CD 109 All-Purpose 2 Lane Dual Carriageway standard, with a grade-separated junction at Southfields. That would open the door to the more constructive dialogue with NH on the Local Council Group proposals which BPC seeks.	<p>CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).</p> <p>National Highways welcome continued dialogue with Broadway Parish Council.</p>	N/A
63	Broadway Parish Council	Further comments about the plans for Section 1: M5 junction 25 to	BPC believes that the critical issue here is the necessity to construct a bypass around Henlade. That is important not just to relieve the residents of the area from the noise and air pollution from which they currently suffer and to	National Highways acknowledges the support for a bypass around Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Mattock's Tree Green junction.	improve safety, but to provide easier access to and from the M5 and Taunton for those living in the wider hinterland down to Ilminster.	connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	
64	Broadway Parish Council	Section 2 – Mattocks Tree Green junction to Griffin Lane.	BPC welcomes NH's acceptance of the Local Council Group's suggestions of providing access to the Progressive School and nearby properties/businesses (2b) and linking Mattocks Tree Green to Village Road and so to Hatch Beauchamp (2c). BPC disagrees with the spur off the northern roundabout, which it believes to be unnecessary (2a).	National Highways acknowledges the range of views expressed, including those received in support of the project.  As the northern roundabout forms part of the Mattock's Tree Green junction, the function of which is to provide access to and from the A358 dual carriageway, there needs to be a good connection to the local road network and the slip roads at this location. The A358 will encourage traffic between the A358 and areas such as Monkton Heathfield to stay on the dual carriageway and use the route via M5 junction 25 instead of exiting or joining the dual carriageway at the Mattock's Tree Green junction.	No
65	Broadway Parish Council	Section 3 – Griffin Lane to Ashill junction.	BPC endorses the Local Council Group critique of NH's proposals along this section of the route.	National Highways acknowledges support for comments made by the Community of Parishes; for specific responses to matters raised see the relevant section of this table.	N/A
66	Broadway Parish Council	Section 4 – Ashill junction to Southfields roundabout	BPC endorses the responses at 4a and 4b submitted by the Local Councils Group.		N/A
67	Broadway Parish Council	Section 5 – Improvements for walkers, cyclists and horse-riders, including disabled users	BPC is concerned at the number of crossings for these users which will be severed. The route through Broadway via Broadway Road and Street is popular with cycle clubs and walkers and there are several local people who ride the area's bridleways and country lanes. However, as previously indicated and so far as Broadway is concerned, BPC hopes that the proposed links from Broadway Street for vehicles to the Ashill junction and the path to Horton Cross will be useful for these users.	Existing links from Broadway would be retained and users would be able to cross the scheme at Sunnyside underpass, Ashill junction or Jordans overbridge. All of these crossings would be safer than the existing at grade crossings. Two of the crossings would be traffic-free and classified as restricted byways and therefore be inclusive. Broadway Street link would be lightly trafficked and suitable for walkers, cyclists and horse-riders. The new restricted byway from Broadway Street link to Horton Cross, and Jordans overbridge in particular, strengthens the off-road network in this area.	Yes
68	Broadway Parish Council	Section 6 – Planning ahead for construction	BPC is concerned at the potential disruption to the passage of vehicles, including farm vehicles, during the construction phase and at the likely increase in noise and dust pollution. BPC wishes there to be clarity not yet available on the route of any haul roads or site camps.	Details of proposed haul roads and proposed compound locations are included within the DCO documentation within Figure 2.1 of the ES Figures (Document Reference 6.3). These will be subject to refinement as the construction programme is further developed during the detailed design stage, subject to successful DCO consent, but will remain in line with the requirements of the DCO.	N/A
69	Broadway Parish Council	Section 7- The Environment	BPC shares the views of the Local Council Group. With the exception of Henlade air quality is generally good in the area. Because the area is rural the large footprint of the Expressway is likely to have a permanent significant adverse effect on the Vale of Taunton Deane and North Curry Sandstone Ridge landscapes and will adversely impact on views across these landscapes (Table 16.1). Minimising the environmental impact of the scheme points to minimising the scheme footprint, which in turn points to a non-Expressway standard dual carriageway.	National Highways acknowledges comments provided with regard to air quality. The impacts and effects on the Vale of Taunton Deane and North Curry Sandstone Ridge landscape character areas were reported in the PEI Report and are reported in ES Chapter 7 Landscape and visual effects (Document Reference 6.2).  Where possible within the design requirements of the scheme, mitigation measures to reduce the impacts and effects have been incorporated into the scheme design. At Mattock's Tree Green junction, environmental mitigation measures in the form of an arch structure to minimise the appearance of the cutting, use of hedgerow planting across the bridge, and provision of planting on the cutting slopes has been proposed to reduce potential landscape impacts.	N/A
70	Broadway Parish Council	Summary	Broadway Parish Council (BPC) endorses the analysis of the National Highways' (NH) A358 dualling proposals contained in the formal response provided by a group of local councils whose communities would be affected by the scheme. In particular, BPC agrees that there is no need or justification for the dualling to be built to Expressway standard, that this would be unnecessarily costly and environmentally damaging and would seriously disrupt local connectivity to, from and across the A358. BPC believes that the governance of the project has been defective and that NH has cherry-picked	CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions. National Highways are adopting the latest design standards for the A358 Taunton to Southfields	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>the standards it wishes to adopt in the design of the route, while ignoring mandatory requirements, like a grade-separated junction at Southfields, which would have local support. BPC believes that the project should be redesigned to CD 109 All-Purpose 2 Lane Dual Carriageway standard (similar to the A303 Sparkford to Ilchester scheme currently under construction), a more modest, but still satisfactory standard, and that local communities should be consulted afresh on the emergent design.</p>	<p>scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).</p> <p>Overall, National Highways considers the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.</p>	
71	Broadway Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	BPC's support for this proposal is qualified.	National Highways welcomes support for the proposals.	N/A
72	Broadway Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	BPC strongly supports the creation of a path for walkers, cyclists and horse riders proposed between Broadway Street and Horton Cross via the abandoned A358.	Responding to the consultation feedback, a new overbridge at Jordans Farm would replace the previously proposed route under the A358 through Ding bridge and strengthen the off-road network in this location. It would connect the Old A358 at Horton Cross, Broadway Street and Cad Road and be classified as a restricted byway. The overbridge would be shared use with the landowner and very lightly trafficked.	Yes
73	Broadway Parish Council	To what extent do you agree or disagree with our proposals to upgrade	BPC strongly disagrees with this. The proposed upgrades to M5 junction 25 and the Nexus roundabout, which will remain at-grade priority/traffic light controlled, will transfer the current congestion at Henlade to the M5 and Nexus roundabouts. This has implications for	Both M5 junction 25 and the Nexus 25 signalised junction are forecast to operate within their practical capacity during peak hours in the design year of the scheme (year 2046, 15 years after scheme opening). This means that drivers will on average get through the signals on the first occasion that they turn green once they arrive at those junctions and	N/A

		M5 junction 25 and the Nexus roundabout?	Broadway residents wishing to access the M5 and the employment, health, retail and leisure facilities in Taunton.	therefore delays at both locations will just be related to a typical signal cycle and will hence be relatively small.	
74	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	At Capland, which option would you prefer to provide a connection between local villages in this area?	Option 1 Provide a connecting link road between Capland Lane and Village Road.  The Capland Lane link should be no more than a single lane in keeping with the existing lane. It would prevent severance of Capland Lane residents from the village of Hatch Beauchamp and provide a flood free route to Village Road. The link is also needed to provide access to Capland Orchard Farm and as an alternative path for bridleway T14/25 that is the current WCH link. The proposal to carry out works to attenuate the flood risk on Stock's Lane and Stewley Lane would have none of these benefits and would involve costs akin to the provision of a link.	Following consultation feedback, National Highways has amended the scheme design to include a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
75	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane?	There is no evidence for building the dual carriageway to an Expressway build standard. GD 300 E/5.1 directs the highway link between Southfields roundabout and M5 Junction 25/Nexus roundabouts be designed as a trunk link road in accordance with CD 109.	CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions. 	Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP				
76	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane?	The 2019 SAR reported the requirement for departures from standards within this section relating to sight distances, and horizontal and vertical geometry around the Hatch Beauchamp bypass. No information on the consequences of these departures from standard has been published within the Consultation documentation.	Departures from standard are necessary when scheme constraints do not permit a design layout to standards and are common on schemes which involve the upgrade of an existing route. All departures from standard require a robust justification and National Highways are developing and progressing departures from standards on the scheme, including sections of the Hatch Beauchamp Bypass. This will be an ongoing process that continues through to the start of construction.	N/A
77	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council,	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	It is within this section that cost-cutting has had a severe negative impact on local communities. The 2019 SAR published a popular proposal to provide an additional junction south of Hatch Beauchamp (SAR, Figure 6.15 and Table 6.13) to specifically improve connectivity and reduce the flow of traffic through Hatch Beauchamp and Ashill, contradicting the current National Highways analysis of traffic flows. The removal of this junction by the then Highways England Executive leads to the conclusion, further evidenced by the high-level IAR report, that the dogmatic pursuance of an Expressway aspiration has bleed funding away from providing a usable A358 to local communities. There remains no evidence for building the dual carriageway to an Expressway build standard. GD 300 E/5.1 directs the highway link between Southfields roundabout and M5 Junction 25/Nexus roundabouts be designed as a trunk link road in accordance with CD 109.	CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.  Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. 	Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP			being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.	
78	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	GG 104 defines Other Parties as people living or working adjacent to the road or using the local rural network affected by the scheme. Clause 2.12 requires National Highways to conduct a safety risk assessment to clearly identify all sub-populations within Other Parties and record how each is or can be affected by the scheme. Furthermore, GG 104 mandates National Highways to reduce the risk to Other Parties to as low as is reasonably practical, a higher level of safety than required for actual road users. National Highways has not mitigated the risks to Other Parties to an ALARP level because of the cost involved, and is using the GD 300 restrictions on access to an Expressway to mask this fact. The Parish Mitigation Proposals provide Other Parties with an ALARP outcome at an affordable cost. Parishes further believe a benefit cost ratio (BCR) analysis as detailed in GG 104 would support the adoption of our proposals. Besides significantly improving safety within the villages the connections to the dual carriageway provide emergency access and egress as recommended by GD 368.	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  National Highways has also been engaging closely with Somerset Council as the local highway authority for advice and comment on the local road network. During this stage of scheme development, National Highways and Somerset Council have jointly developed a Local Roads Strategy (LRS) and Local Roads Assessment (LRA) for the scheme. The LRS assesses suitable design methodologies and standards for those parts of the local roads network affected by the scheme while the LRA identifies risk and proposed mitigation, adopting GG104 principles. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	No
79	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	National Highways' conclusions on Human Health, Noise and Vibration highlights the mediocrity of the scheme as currently designed. North Curry and Stoke St Gregory, villages miles away from the direct impact of the scheme, are the sole identifiable beneficiaries. It is also damning that the Expressway will subject more residential properties to noise and vibration (813) than those benefiting from less (324). For the rest, National Highways can only point to a 'likely slight beneficial effect' on health across the local area, whilst ignoring the adverse impact on communities lying adjacent to the Expressway.	The scheme will include a low noise surface to minimise noise generation in all locations. Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. Where individual residential properties are still predicted to be exposed to noise increases above the thresholds set out in the Noise Insulation Regulations 1975, they may qualify for a package of noise insulation measures (glazing and ventilation) to minimise noise ingress to their property. A description of the embedded noise mitigation measures included within the scheme design is provided in ES Chapter 2 The project and within ES Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barrier are shown on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3).  Taking account of the additional mitigation measures, since the PEI Report was produced, as set out in ES Chapter 11 Noise and Vibration (Document Reference 6.2), a total of 110 permanent significant adverse effects and 360 permanent significant beneficial effects have been identified.	N/A

80	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	The loss of historic accessibility to the A358 along Section 3 will necessitate long diversions along unclassified and C class rural lanes and roads. Experience to date is that these roads are poorly maintained by Somerset Council, evidenced by pot holes, uncleared gullies, limited cutting of road hedges and verges. In autumn and winter the rural network is very dark, often muddy and slippery and in many places flooded or obstructed by pools of water. These issues already make the rural network precarious. The increased traffic volume, incompatibility of traffic types (cars, vans, lorries and agricultural vehicles) with each other and WCH uses will increase mental and physical stress on local communities. School runs will become more stressful. Businesses will be handicapped. Community severance will increase. The scheme does not consider in any depth these effects nor offers any mitigation of substance.	National Highways has also been engaging closely with Somerset Council as the local highway authority for advice and comment on the local road network. During this stage of scheme development, National Highways and Somerset Council have jointly developed a Local Roads Strategy (LRS) and Local Roads Assessment (LRA) for the scheme. The LRS assesses suitable design methodologies and standards for those parts of the local roads network affected by the scheme while the LRA identifies risk and proposed mitigation. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	No
81	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	There is no evidence for an Expressway build standard. The 2019 SAR indicates the route should be built as a dual all-purpose trunk road.	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is	N/A

	Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP			being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.	
82	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	HE SAR 2019 traffic data indicates that the closure of Cad Road/T junction would greatly increase traffic along Rapps Road. Much of this traffic is HGV to the two Ilton Business Parks and daily military convoys to and from Merryfield Airfield. The scheme proposal is inadequate to safely cope with this increased traffic load on a narrow country road. The current near balance in traffic along Rapps Road and Cad Road needs to be maintained by providing a single slip road from Cad Road/T junction on to the eastbound carriageway.	National Highways has undertaken an assessment of mitigation measures that are likely to be required on local roads as a result of the traffic impacts of the scheme. The standard of Rapps Road is such that it provides sufficient capacity to accommodate the forecast increase in traffic volumes. HGVs make up only around 2% of overall traffic volumes along Rapps Road and the speed limit through Rapps is 40 mph.  Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  National Highways note that the solution proposed by the Community of Parishes would allow traffic to use Cad Road to travel towards the A358 and access it in the southbound direction only. Traffic travelling in the opposite direction (from Southfields roundabout to Ilton) would still have to use Rapps Road even in the solution proposed by the Community of Parishes and this would therefore not result in maintaining the near balance of traffic volumes between Rapps Road and Cad Road that is desired by the Community of Parishes.	No
83	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	The width of the central reserve of the carriageway is excessive along the whole scheme but is particularly excessive on the approach to Southfields roundabout.	The separation between carriageways is due to the provision of sufficient stopping sight distance, which is one of the key parameters that impact road safety.	No

Ilminster Town Council will base their Response on CoP	Further comments about the plans for Section 1: M5 junction 25 to Mattock's Tree Green junction.	There is no evidence for building the dual carriageway to an Expressway build standard. GD 300 E/5.1 directs the highway link between Southfields roundabout and M5 Junction 25/Nexus roundabouts to be designed in accordance with CD 109.	CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.	N/A
87	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council,	Please let us know if you have any comments on the information presented in the Preliminary	With the exception of Henlade air quality is generally good in the area. Because the area is rural the large footprint of the Expressway is likely to have a permanent significant adverse effect on the Vale of Taunton Deane and North Curry Sandstone Ridge landscapes and will adversely impact on views across these landscapes	National Highways acknowledges comments provided with regard to air quality. The impacts and effects on the Vale of Taunton Deane and North Curry Sandstone Ridge landscape character areas were reported in the PEI Report and are reported in ES Chapter 7 Landscape and visual effects (Document Reference 6.2).	N/A

	West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Environmental Information (PEI) Report	(Table 16.1). Minimising the environmental impact of the scheme points to minimising the scheme footprint, which in turn points to a non-Expressway standard dual carriageway.	Where possible within the design requirements of the scheme, mitigation measures to reduce the impacts and effects have been incorporated into the scheme design. At Mattock's Tree Green junction, environmental mitigation measures in the form of an arch structure to minimise the appearance of the cutting, use of hedgerow planting across the bridge, and provision of planting on the cutting slopes has been proposed to reduce potential landscape impacts.	
88	Community of Parishes: Beeroccombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	Since the scheme inception in 2014, the environmental issue of climate change has risen to prominence. The 2014 ideology of building big may now be out of step with current thinking of building small, the phasing out of petrol and diesel cars, and nudging seasonal travellers to alternatives like rail.	<p>National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.</p> <p>National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the PEI Report considered impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). This assessment has also been updated within ES Chapter 14 (Document Reference 6.2), which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 and concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.</p> <p>An outline Carbon Management Plan is provided as Annex K of the Environmental Management Plan (Environmental Statement Appendix 2.1, Document Reference 6.4).</p>	N/A

Ilminster Town Council will base their Response on CoP	Principal Issues - Business Case	<p>It has become evident that pursuance of the 'Expressway Corridor' vision has distorted the thinking behind the current A358 improvement project. Our view is supported by an executive level Independent Assurance Review (IAR) (Obtained through FOI/2578. IAR, formerly known as Office of Government Commerce (OGC) Gateway Review 2: Delivery Strategy) of the scheme during Stage 2, Preferred Route selection, that reported serious concerns regarding the influence a high level aspiration to deliver an Expressway to the Southwest had on the scheme design.</p> <p>Originating in 2014, along with Smart Motorways, the concept of building a sub-category of a Motorway called an Expressway emerged. An Expressway is therefore built to an entirely different scale to an all-purpose trunk road commonly used to link sections of the Strategic Road Network.</p> <p>The Review rated the scheme AMBER/RED, noting that the scheme capital provision was arguably incapable of funding a dualling scheme to Expressway standard, that the deliberate focus on the aspiration prevented comparison with alternative, more affordable options and that the design prioritised the aspiration above all other stakeholder requirements. Of particular note to our locality the IAR concluded that 'the proposed Expressway standard, for which no justification has been presented, may have a major impact on severance on the southern section of the route'.</p>	<p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p>	N/A
92	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council,	Principal Issues - Business Case	<p>An Expressway promises high performance, achieving a mile-a-minute travel experience. This is not possible in this scheme as both the eastern and western ends of the link terminate in roundabouts, the latter a double roundabout with traffic lights. The congestion that exists on this link emanates from the roundabouts and on the western end is exacerbated by the adjoining village of Henlade. As the scheme does not, and will not, bypass these roundabouts with free-flowing grade separated junctions the objectives set in the 2014 Road Investment Strategy (RIS) 1 (The 2020 RIS 2 describes the A358 scheme as a dual carriageway link. The sole Expressway scheme in RIS 2 was the Oxford to Cambridge Expressway, recently cancelled due to the low benefit to cost) will not be achieved. Money spent on the Expressway aspiration is money wasted, requiring more resources like prime agricultural land and construction material for the excessively complex junctions, central barrier and boundaries. Rather than accept this conclusion Highways' England Executive embarked on a cost cutting exercise (Obtained through FOI/2578. Full SGAR 2_Redacted - End of Stage Report - 2019.05.24.) that decided the scheme would proceed with the expensive Expressway, but without any 'extras' like the requirement for a Hatch Beauchamp junction.</p>	<p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. 	Corfe Parish Council. Ilminster Town Council will base their Response on CoP		Consequently, local communities are denied the historical connectivity that is their right because of a misplaced high level aspiration.	part of the scheme and whilst this is a specific requirement of a Level 2 dual carriageway, such barriers are typically used on parts of the all-purpose trunk road network due to whole life cost benefits and minimal maintenance requirements.  Overall, National Highways believes the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.	
93	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Business Case	The business case for the scheme needs to be rewritten with emphasis on a Henlade bypass and resolving the sources of congestion at the roundabouts. The link itself is not the major priority but any new road should be cheaper, simpler and environmentally less damaging.	Local councils and business leaders agree that upgrading the rest of the A303/A358 corridor to dual carriageway would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.  National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including transport users, road safety, wider area impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to see whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient to support delivery. This is reviewed at every stage of work to see whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the DCO is granted.  The proposed Scheme is part of the Government's Road Investment Strategy 2 (RIS2), which identifies parts of the strategic road network which need upgrading to improve safety, connectivity, and reliability for its users. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the ComMA Report (Document Reference 7.4). This includes the scheme cost, the economic benefits and the benefit to cost ratio.	N/A
94	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet	Principal Issues - Consultation	During the 2021 consultations ten parishes that lie directly within the scheme developed proposals that would mitigate the adverse impact of the scheme to an ALARP level. These proposals were at the centre of the consultation Forums held by National Highways. It is unfortunate that National Highways excluded the proposals from all statutory consultation material, including DCO preparatory documents like the PEIR. The latest revision of the community proposals has been incorporated into this consultation response.	We were not able to accommodate requests to display the mitigation proposals submitted by the group of parish councils as part of our statutory consultation. We needed to ensure it is clear to the general public what we are consulting on and the inclusion of any additional materials or proposals may cause confusion. Likewise, to include one set of alternative proposals in our consultation materials could be seen to be unfair to other stakeholders and community groups who may have a different viewpoint on the scheme design. Our approach ensures fairness across the community.  Engagement with the Parish Councils has been ongoing, including consideration of suggested alternatives, and requests to share information. Sections 2.5 and 6.2 of the Consultation Report (Document Reference 5.1) provide more information. National Highways were not able to accommodate requests to display alternative proposals submitted by a group of parish councils as part of the statutory consultation exercise. National Highways considers it not to be appropriate to display or consult on materials prepared by third parties that suggest alternatives to the proposals being consulted upon. National Highways has properly considered suggested alternatives through design development and consultations, as is set out in Environmental Statement Chapter 3 Assessment of alternatives (Document Reference 6.2).	N/A

	Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP				
95	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Consultation	The Consultation presented 7 key documents of which one, the PEIR, is 792 pages long with 36 Appendices and over 150 Figures. The scheme is extremely complicated and the 6-week consultation period is too short to enable the information to be assimilated with any rigour. National Highways was slow in responding to email questions and the web centric format is unfamiliar to many within a rural population. The face-to-face events were very limited in number and open times, and the complexity of the paper and online Questionnaires discouraged responses from individuals.	<p>National Highways has noted this feedback. A number of documents were made available in addition to the PEI Report, both digitally and in print, as well as in accessible formats such as easy-read and braille. These documents included the consultation booklet, a non-technical summary of the PEI Report and the traffic technical note. These were provided to ensure that people could view and engage with as many of the materials as possible during the consultation period at different levels of expertise and / or interest.</p> <p>The statutory consultation period for this project lasted 41 days, which exceeds the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days. We advertised the dates for the consultation period widely in the local press and through continued engagement with local communities and stakeholders, including at Community Forum events, parish council meetings and in Member briefings. We believe that this has provided adequate time for people to get ready for the consultation and to provide their responses, this includes aligning any governance processes needed to accommodate it.</p> <p>We provided a range of activities throughout the consultation period including in-person events, webinars and webchats, to ensure the consultation was accessible. Hard copies of materials were available at 11 locations in the vicinity of the scheme.</p> <p>Additionally, contact details, including a freephone telephone number and email address were widely published should anyone need help finding specific documentation, place an order for a hard copy of materials, or to arrange a telephone surgery with the project team.</p> <p>Responses were provided for all correspondence during the consultation period and a holding response provided if time was required for National Highways to provide a more detailed technical response. Any requests for further information or documentation that was outside of the materials provided for consultation were responded to positively where possible.</p> <p>National Highways has undertaken a multi-stage approach to consultation and has engaged with parish councils throughout the development of the project. More than 900 responses to statutory consultation were received using the variety of response mechanisms that National Highways ensured were available, including the online questionnaire, email and freepost, demonstrating that consultation was accessible and that technical issues did not prevent respondents from providing their feedback.</p>	N/A
96	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council,	Principal Issues - Consultation	On issues of this scale most parishioner leave it to the Parish Council to represent their views. Besides the task of appraising the scheme Parish Councils have to draft a response, circulate and brief parishioners, and redraft until consensus is achieved. This takes time and the 6-week consultancy period is an unnecessary tight schedule. Furthermore, nowadays, most drafting is done in a Word editor. National Highways made this expected task difficult by not providing a Word based template.	The statutory consultation period for this scheme lasted 41 days, which exceeds the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days. We advertised the dates for the consultation period widely in the local press and through continued engagement with local communities and stakeholders, including at Community Forum events, parish council meetings and in Member briefings. We believe that this has provided adequate time for people to get ready for the consultation and to provide their responses, this includes aligning any governance processes needed to accommodate it. National Highways did not restrict respondents to use the questionnaire format.	N/A

Ilminster Town Council will base their Response on CoP	Principal Issues - Consultation	The Statutory Consultation was a public relations exercise to elicit support for a scheme centred on delivering an Expressway. No evidence has been provided that an Expressway is the most appropriate standard to be applied. No comparison to a trunk road design standard has been published. Traffic analysis provided did not present the worse case scenario of peak holiday traffic thereby obscuring the inability of the scheme to resolve one of its major objectives. The public has not been provided with the information needed to make an informed opinion.	<p>We have modelled a specific traffic forecast scenario to represent peak holiday traffic. During peak holiday season congestion would generally increase more in a future situation without the A358 Taunton to Southfields Dualling Scheme because of the lack of available road capacity to accommodate the additional holiday traffic. This effect is captured in the value for money assessment for the scheme reported in the ComMA Report (Document Reference 7.4).</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. 	Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		than provide safe taper merge/diverge slip access to the A358 diverts traffic 2-3 miles along unclassified and C Class lanes and roads, and even through villages, to reach the two junctions providing access to the A358. Rural lanes and roads are not well maintained by Somerset Highways and with the increase traffic load placed on them by the scheme the situation will worsen. Furthermore, in winter the rural network is often slippery with leaves, mud and surface water, and the narrow lanes can be very dark, with overlying shadows. During seasonal work the network is busy with farm vehicles, which often follow a one way system for long distance haulage of crops. The scheme as designed will prevent this occurring exacerbating conflict between farm traffic and between other vehicles.	very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  National Highways has also proposed local road improvements as a result of changes in traffic flows which are considered appropriate to the nature of the local road network and has developed these in conjunction with Somerset Council as the local highway authority. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	
99	Community of Parishes: Beercombombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Design Failings	The A358 Technical Traffic Note provides some limited data on the performance of the scheme and within the local rural network. Although journey times are modelled to the second no similar precision is provided regarding the locations at which modelled journeys commence and finish. However, with the data available it is possible to assess that the average speed along the scheme is a modest 50mph in 2028 and 47mph in 2043. This is some way below the design speed of an Expressway and is caused by delays at and across the Taunton and Southfield roundabouts of 3 and 4 minutes in 2028 and 2043 respectively. As National Highways traffic models are constructed to reflect typical conditions on an average weekday the performance during the holiday season will be considerably worse.	National Highways responded to a request for information at statutory consultation and provided the exact start and end location of the journey times quoted in the A358 Technical Traffic Note. All junctions along the A358 corridor would operate within their practical capacity. National Highways has assessed junction performance both based on typical conditions during peak hours outside of the summer holiday season and also under summer peak conditions. Details of junction operation, including delays during peak hours, are reported in the ComMA Report (Document Reference 7.4).  Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.	N/A
100	Community of Parishes: Beercombombe Parish Council, Stoke St Mary	Principal Issues - Design Failings	For this very modest performance that is far below RIS objectives local residents and businesses have been denied normal A303 type of access. The Sparkford to Ilchester scheme, that was recently approved by the Secretary of State for Transport, and part of the same	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions. National Highways are adopting the latest design standards for the A358 Taunton to Southfields	No

	Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		RIS 1 programme, was designed to replicate A303 standards whilst following CD 109 requirements and does provide good access to the rural network. This is not the case for the A358. Moreover, the modelling of the local road network shows this lack of access increases traffic through Hatch Beauchamp by nearly 1,000 vehicles a day and through Ashill by 2,000+ vehicles a day. This traffic is funnelled in through local lanes and roads meaning residents, businesses, walkers, cyclist and horse riders will all be adversely impacted not only from the increased traffic but also from an increase in noise and vibration, often above NPSNN (National Policy Statement for National Networks) tolerance levels.	<p>scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p> <p>Overall, National Highways believes the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.</p> <p>Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.</p> <p>The forecast traffic model developed by National Highways indicates that there would be an increase in traffic through Ashill village as a result of the A358 scheme. The road through Ashill was the Old A358 before the Ashill bypass was built. It is of single carriageway standard and was originally designed to accommodate significantly higher traffic volumes than currently use it. Personal injury accident records do not highlight a safety issue in and around Ashill village. There have been no personal injury accidents along the Old A358 through Ashill since 2007, apart from at the junction with the A358 mainline which will be closed as part of the proposed A358 scheme. The A358 scheme will not lead to significant increases in overall trip mileage for journeys to and from communities local to the A358 corridor.</p> <p>Despite the increase in traffic through Ashill that is forecast as a result of the scheme, the traffic volumes on the road will remain low at around 150 vehicles per hour during the busiest peak hours of a typical day in 2046, which is the equivalent of 2 to 3 vehicles per minute during the busiest time of day. Mitigation measures included in the design on the road through Ashill will enhance safety by adding physical changes to the road layout that will help manage travel speeds through the village.</p> <p>The scheme design has been amended in response to the feedback received at statutory consultation and this has reduced the amount of traffic that will pass through Hatch Beauchamp and Ashill villages compared to the scheme design presented at consultation. National Highways has also proposed local road improvements as a result of changes in traffic flows which are considered appropriate to the nature of the local road network and has developed these in conjunction with Somerset Council as the local highway authority. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).</p>	
101	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish	Principal Issues - Design Failings	National Highways has provided no response to the question of why an Expressway design was chosen for the route, a decision that goes against its own route categorisation governance. No comparison analysis between a GD 300 Expressway and a CD 109 link trunk road has been undertaken. Consultation webinar questions elicited the admission that speed along the link would not be adversely impacted by a non-Expressway design. More profoundly was the admission that the Expressway ideology of a mile a minute travel could not be attained across the scheme because of the speed limitation of the Southfields, Nexus 25, and Junction 25 roundabouts.	<p>CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. 	Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP			being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.  Mile a minute speeds are expected to be representative of the A303/A358 corridor following improvements, however this is not a design requirement applied to individual schemes along the corridor. The proposed arrangement of the junctions at Southfields and Nexus 25 would provide appropriate capacity for the predicted traffic flows in the design year 15 years after opening. This is in accordance with design standards to provide a balance between traffic capacity and economic benefit. Journey time savings resulting from the scheme are forecast to be in the order of 5 to 8 minutes during peak hours, even without further grade separating M5 junction 25 or introducing grade separation at Southfields roundabout.	
102	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Design Failings	The Statutory Consultation exposes serious failings within this National Highways scheme. Unequivocally, governance does not permit the building of a 9-mile Expressway to link roundabouts. The proposed design is extravagant in land usage, unnecessarily cutting a great, environmentally damaging, swathe through a rural landscape at an unacceptable cost to the tax-payer. Except for the Henlade bypass the scheme gives very little back to the local community, adversely impacting their safety and wellbeing so that commuters and seasonal holiday travellers can speed to, and queue at, a roundabout before joining an already overloaded M5 or Ilminster bypass. The Henlade bypass and redesign of the two roundabouts should be completed before any consideration is given to dualling east of Thornfalcon. In that event, mitigation proposals given by local parishes, as an honest attempt to reconcile the adverse impact of the scheme, should be incorporated. It goes against all principles of governance that Community Mitigation Proposals are dismissed by exploiting compliance criteria within DMRB GD 300, whilst ignoring the non-compliance of National Highways' own scheme proposals. Governance requires National Highways to redesign the scheme as an All-purpose Trunk Road following CD109 Highways Link design criteria. Incorporating the proposed mitigation, this perfectly adequate specification, will provide a route usable to all travellers, local and distant.	CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.  National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
103	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish	Principal Issues - Design Failings	Highways England shows no empathy regarding the effect of the proposed design on the social fabric of the communities through which the road passes. Access to shops, fuel, surgeries, churches, village halls, recreation, leisure and social venues, is vital to the wellbeing of the local parish communities. Except for the clear benefits of a Henlade bypass, conclusions reporting the scheme benefits on local communities are weak and subjective (PEIR, 12.9.20, 12.9.83, Table 16-1), using phrases 'likely slight beneficial', 'considered to lead to slight beneficial effect', 'improving the perception of connectivity'. There is no detailed assessment of the problems the scheme will bring to local society as required by GG 104. GG 104 defines Other Parties as	The project design has been modified following the consultation process to incorporate some of the comments made by parish councils and members of the public in the consultation exercise in 2021. The revised design has been communicated to Parish Councils and the statutory bodies and formed the basis for the 2022 supplementary consultation exercise. The DCO application and supporting documents, such as the ES (Document Reference 6.2) has been based on the design resulting from consultation.  National Highways has also been engaging closely with Somerset Council as the local highway authority for advice and comment on the local road network. During this stage of scheme development, National Highways and Somerset Council have jointly developed a Local Roads Strategy (LRS) and Local Roads Assessment (LRA) for the scheme. The LRS assesses suitable design methodologies and standards for those parts of the local roads network affected by the scheme while the LRA identifies risk and proposed mitigation, adopting GG104 principles. Further details on the process of developing mitigation	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		people living or working adjacent to the road or using the local rural network affected by the scheme. GG 104 governance requirements arise from statutory legislation (Section 3(1), Health and Safety at Work etc. Act 1974) that mandates National Highways to reduce the risk to Other Parties to 'as low as is reasonably practical' (ALARP), a higher level of safety than required for actual road users. In spite of this statutory requirement National Highways has not mitigated the risks to Other Parties to an ALARP level. Neither has National Highways embedded design measures to avoid or reduce the adverse impact of noise and vibration as required by the NPSNN (NPSNN 5.195 and PEIR, Table 11.25). Overall, the scheme imposes adverse noise effects on 813 residential properties with only 324 benefiting. Disturbingly, National Highways can only anticipate that the scheme will lead to a slight beneficial effect on local human health. Illustrating the total lack of understanding of the locality, National Highways highlights the positive health outcome in North Curry and Stoke St Gregory, two villages well connected to the A378 some 3-5 miles distant, while ignoring the adverse impact on Hatch Beauchamp, Ashill, Broadway, Ilton and Horton, which adjoin the scheme.	measures on the local road network are included within the ComMA Report (Document Reference 7.4).	
104	Community of Parishes: Beericrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Governance	Following the Stage 2 decision to abandon the free-flowing grade separated junction with the M5 the scheme lost its ability to achieve Expressway status. However, the high level aspiration to build the first section of the 'A303 Expressway Corridor' materially weakened governance that should have directed National Highways towards an efficient, value for money design based on trunk road specification. The Preliminary Environmental Information Report (PEIR) and associated documents describes the scheme in its totality. Unfortunately the design does not address the real issue of the roundabouts at both ends of the link, which cause congestion and significantly reduces the average speed across the scheme. National Highways attempts to obscure this failure by not including the congestion at the roundabouts in the issues needed to be resolved nor within the road typology (PEIR, 1.2.9). Rather National Highways transfers blame for congestion onto the link between the roundabouts. Contrary to what National Highways implies about safety along the route the current A358 and surrounding area has an accident rate lower than the national averages (PEIR, 12.6.69/70), and east of Thornfalcon there is no evidence of traffic joining the A358 being the cause of congestion.	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.  Mile a minute speeds are expected to be representative of the A303/A358 corridor following improvements, however this is not a design requirement applied to individual schemes along the corridor. The proposed arrangement of the junctions at Southfields and Nexus 25 would provide appropriate capacity for the predicted traffic flows in the design year 15 years after opening. This is in accordance with design standards to provide a balance between traffic capacity and economic benefit.  Overall, National Highways believes the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.  The information on accident rates in the PEI Report is based on data for the period 2010 to 2014. This analysis has been updated and included in the ComMA Report (Document Reference 7.4) using the most recent and appropriate data for 2015 to 2019 and this shows that the accident rate for the A358 is higher than the national average.	N/A
105	Community of Parishes: Beericrocombe	Principal Issues - Governance	National Highways avoids use of the word Expressway because of sensitivity of the costs associated with building a sub-category of a Motorway for an 9-mile link.	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. 	Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		Rather it describes the road as a high quality dual carriageway. As National Highways does not build low quality dual carriageways the description is meaningless and is used to obscure scrutiny. Because of their cost Expressways are rigorously governed by GD 300 standards, the title of which is General Principles & Scheme Governance, Requirements for new and upgraded trunk roads (Expressways). GD 300 is within a library named Design Manual for Road and Bridges (DMRB) and as the title suggests provides governance over National Highways design. GD 300 stipulates that the whole standard must be applied within an Expressway scheme. A key component of an Expressway is that all junctions are required to be at full-grade separation (GD 300, Table E/5.2), but the scheme fails this requirement as the link terminates at at-grade roundabouts, one even with traffic lights. In this situation GD 300 governance directs National Highways to categorise the scheme as an All-Purpose Trunk Road (GD 300, E/5.1) built according to CD 109 standards (Highway link design) with all other design requirements re-evaluated (GD 300, E/1.4). This governance related directive does not permit a departure from standards (GD 300, Table E/F.31) and is in place to ensure that schemes are efficient, provide value for money, and minimise the environmental impact, mandates placed upon National Highways by its Licence (Paragraphs 4.2d and g). If governance had been followed the scheme would have followed a simpler, cheaper design, evidenced within the 2019 Scheme Assessment Report (SAR) conclusion that the route could be simplified if Expressway standards were not applied (SAR, 7.1.8).	<p>first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p> <p>The DMRB covers a suite of different standards that are used for the design of motorway and all-purpose trunk road schemes. As with any major highways scheme, there are both scheme specific objectives and scheme specific constraints that must be considered alongside the requirements and advice included within DMRB. As part of the work undertaken during early project stages and announced in June 2019 as the preferred route, it was decided that the scheme was to run between M5 J25/Nexus 25 and Southfields roundabout.</p> <p>At Nexus 25, the signalised junction will serve not only the new A358, but also the connections into the proposed Nexus 25 employment site and to the Taunton Gateway Park and Ride and local connections into Henlade and Creech St Michael. Given this, and the proximity of Nexus 25 to Junction 25, a grade separated junction is not considered to be feasible at this location.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p>	
106	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council,	Principal Issues - Governance	As National Highways will evade this issue it needs to be stressed that GG 101, General Principles & Scheme Governance, states the verb 'shall' is an explicit requirement placed on National Highways by DMRB governance and its Licence. The scheme encompasses three at-grade roundabouts, which means it fails the junction requirements of an Expressway as detailed in GD 300, E/5.2 and E/6.9, and therefore must be categorised as required by E/5.1. E/5.1 Highway links shall be designed in accordance with CD 109 (i.e. Table A.2). E/5.2 Expressways shall be designed in accordance with the requirements of Table E/5.2. (Table E/5.2 provided) An evaluation of the Preferred Route compatibility with GD 300 requirements, which came into effect in May 2019 just after the end of Stage 2, should have been undertaken at the commencement of Stage 3, at which point DMRB governance should have directed a decision to categorise the route as a D2AP road as described in	<p>DMRB GG101 confirms that requirements with the verb form "shall" can be varied through the use of departures or in limited situations as relaxations.</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. 107	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Governance	A recent response to a consultation query (email response from NH to Mr Martin Hills dated 15/11/2021) demonstrates the ambiguities within National Highways' compliance with design principles and governance, a requirement placed on National Highways' Licence (5.28) and by GG 103, Sustainable Development and Design, (5.1 and Note). E/5.2 and Table E/5.2 are explicit that a junction at a major road intersection, i.e. the A358 Expressway and the M5, is to be a FULL grade separated junction, requiring free flowing merges and diverges. As this is not provided in the scheme National Highways defends the A358 Expressway standard by insisting Junction 25 is a grade separated terminal junction, ignoring the at-grade conflicts with other connections at the roundabout. Its own traffic analysis concludes that the roundabout and its traffic management introduce delays that totally undermine the high-performance promise of an Expressway standard. National Highways admits that both Nexus 25 and Southfields do not comply with Expressway standards but chooses to ignore E/5.1 and E/5.2 governance stating the standards that it is working to - Appendix E/F of GD 300 - are only advisory, quoting Clause E/F1.1. This is not the case as the Clause also directs the level of applicability to be followed in any design, and Table E/F.31 states that Table E/5.2 is applicable to Level 1 and 2 Expressways. The footnote to Table E/F.31 reinforces this point stating 'DG/E/5.2/1 [Level 1 & 2] The requirements in Table E/5.2 apply. If requirements in Table E/5.2 are not applied in accordance with this it prevents future compatibility with level 3 and 4 without further major interventions'. It is symptomatic of National Highways to cherry-pick what it does and does not	<p>M5 junction 25 is a full-grade separated junction (and the terminal junction of the proposed A358 scheme) as it has free flowing merges and diverges between the M5 and slip roads. Figure A.6 of CD 122 Appendix A (Examples of full grade separated junction layouts) provides an example of a "Roundabout - 2-bridge configuration" which represents the M5 junction 25 layout.</p> <p>The proposed arrangement of the upgraded M5 junction 25 would provide appropriate capacity for the predicted traffic flows in the design year 15 years after opening. This is in accordance with design standards to provide a balance between traffic capacity and economic benefit. With M5 junction 25 forecast to operate within its practical capacity any delays and queues that are reported at the junction in the ComMA Report (Document Reference 7.4) are associated with the normal build up and dissipation of queues as part of the signal cycle, with queues for a particular movement building up when traffic lights are red and being released when they are green.</p> <p>Traffic modelling indicates that journey time savings resulting from the scheme will be in the order of 5 to 8 minutes, which demonstrates that M5 junction 25 and Southfields roundabout in the configuration proposed as part of the A358 scheme design do not undermine the performance of the scheme as a high-quality dual carriageway or the scheme objectives.</p> <p>At Nexus 25, the signalised junction will serve not only the new A358, but also the connections into the proposed Nexus 25 employment site and to the Taunton Gateway Park and Ride and local connections into Henlade and Creech St Michael. Given this, and the proximity of Nexus 25 to Junction 25, a grade separated junction is not considered to be feasible at this location.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but</p>	No

			observe within the DMRB manuals. With regard to the Community of Parishes proposals we have been repeatedly told that several are not permitted due to non-compliance with Appendix E/F, which National Highways is now stating is only advisory. Within its response National Highways also describes the Expressway scheme as being future-proofed and compliant with anticipated future changes. With climate change measures already effecting national infrastructure projects across the UK, this claim is very questionable.	considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.  Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  National Highways are continuing to gather environmental information that allows us to identify the potential impacts of the proposed scheme and develop measures to avoid or reduce them. This process is known as an Environmental Impact Assessment (EIA). The ES reflects the evolution of the design of the scheme and is submitted as part of our DCO application (Document Reference 6.2).	
108	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Governance	It is extraordinary that National Highways is proposing to build an Expressway, yet does not use the name itself in any documentation presented at the Statutory Consultation. National Highways only refers to GD 300 standards once, in Table 3.1 to record that the imposition of GD300 standards is the reason all current at-grade junctions along the A358 are to be closed. The fly-through video of the scheme has shocked local people by the extraordinary complexity of the carriageway and junctions, the excessive scale of the central reserve, the extravagance of the boundary and drainage system and the overall urbanisation of what is a country road. The build specification of an Expressway has clearly led to a large inflation of the cost of the scheme and its environmental impact. Compounded by the Stage 2 decision to abandon the free-flowing grade separated junction with the M5 the Benefit-to-Cost Ratio is now at the very low level of 1.2 (A358 Technical Traffic Note, 7.1.3). National Highways' insistence on building a high cost Expressway jeopardises the viability of the scheme.	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.  The Benefit-to-Cost Ratio (BCR) is updated as the scheme design evolves. The BCR for the scheme has improved relative to the option selection stage, where a BCR of 1.21 was reported as part of the Preferred Route Announcement. There are several reasons for this, including changes made to the scheme design, but also changes in external influences such as the inclusion of upgrades along the A303 corridor which now have planning consent in our traffic forecasts, which results in more traffic travelling along the A358/A303 corridor. The latest BCR is reported in the ComMA Report (Document Reference 7.4).	N/A
109	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish	Principal Issues - Governance	As detailed in paragraph 4 above the decision to remove the Hatch Beauchamp junction and other slip road accesses from the scheme was to save money that was needed to finance the Expressway itself. This, National Highways has consistently refused to acknowledge. Rather it blames the imposition of Expressway/Motorway standards that do not permit connections to minor roads as detailed in GD 300 Table E/5.2 to obscure the real reason. However, such connections may be permitted (GD 300, E/6.7). Indeed, the approved Ashill junction is connected to three C-class roads so it is equally possible to approve a Hatch Beauchamp junction connecting	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is	No

	Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		Staple Fitzpaine Road, Village Road, and Wood Road via service road, all C-Class roads, to the A358. Although local parishes disagree with the Expressway standard, all of their proposals for access has followed CD 122 grade separated taper merge/diverge slip road standards and hence are compatible to both an Expressway and an All-Purpose Trunk Road.	being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.  Overall, National Highways believes the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.  Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  The note to GD 300 Clause E/6.7 clarifies that junctions required to support localised interaction can include major retail outlets, significant visitor attractions, major housing developments or transport hubs – such facilities are not present along the A358 corridor to justify the inclusion of additional junctions beyond those currently proposed at Mattock's Tree Green and Ashill.	
110	Community of Parishes: Beericrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Value for Money	In the value for money assessment the benefits of the scheme are compared to the costs of constructing it. Time saved by users of the A358 form a significant part of benefits, but the value for money assessment also covers other aspects such as road safety and environmental impacts (A358 Technical Traffic Note, 7).	National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including transport users, road safety, wider area impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to see whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient to support delivery. This is reviewed at every stage of work to see whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the Development Consent Order is granted.	N/A
111	Community of Parishes: Beericrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch	Principal Issues - Value for Money	Table 6-1 of the Technical Traffic Note reports time saved with the scheme is of 5 to 6 minutes for a typical average weekday journey (2.1.1). During seasonal holiday periods when traffic is considerably greater than average the time saved would be less because of the increased queue time at the terminal roundabouts. According to the executive level Independent Assurance Review a journey time savings of 6 minutes is unlikely to be of benefit to longer distance travellers, which places a	During the summer holiday period the time savings are comparable or better when compared to other times of year because congestion without the scheme in place would increase more than congestion with the scheme in place. This is because there will be less capacity on the road network to accommodate the higher traffic flows without the A358 scheme in place. The projected scale of time saving over a 14km distance is considerable and there are few major highway schemes that would achieve journey time savings significantly in excess of this level. The monetary benefit associated with the forecast time savings are captured in the economic appraisal, which indicates that benefits of the scheme outweigh its costs and the time savings are a key contributor to this.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		damming assessment on the time saving benefits of the scheme. Regarding safety, National Highways own statistics proves the current A358 and surrounding area has an accident rate lower than the national averages (PEIR, 12.6.69), and with the exception of the Henlade bypass the environmental impact of the scheme is wholly negative.	Analysis of accident data from 2015-2019 shows that the A358 corridor is less safe compared to the national average. Single carriageway roads are inherently less safe than dual carriageways because dual carriageways significantly reduce the likelihood of head on collisions and collisions related to turning movements at junctions. The creation of a dual carriageway along the A358 will bring significant accident savings that will reduce the number of killed and seriously injured casualties. Details of the accident analysis are given in the ComMA Report (Document Reference 7.4).  ES Chapter 12 Population and human health (Document Reference 6.2) has undertaken an impartial and professional assessment according to DMRB LA112.	
112	Community of Parishes: Beericrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch, Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	Principal Issues - Value for Money	It is therefore not surprising that the Benefit-to-Cost ratio of the scheme is at the very low value of 1.2. Knowing the cost of meeting the Expressway aspiration is very large, it appears irrational not to have developed a cheaper, simpler non-Expressway alternative design.	The Benefit-to-Cost Ratio (BCR) is updated as the scheme design evolves. The BCR for the scheme has improved relative to the option selection stage, where a BCR of 1.21 was reported as part of the Preferred Route Announcement. There are several reasons for this, including changes made to the scheme design, but also changes in external influences such as the inclusion of upgrades along the A303 corridor which now have planning consent in our traffic forecasts, which results in more traffic travelling along the A358/A303 corridor. The latest BCR is reported in the ComMA Report (Document Reference 7.4).	N/A
113	Community of Parishes: Beericrocombe Parish Council, Stoke St Mary Parish Council,	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? To summarise,	The Community of Parishes propose that the existing roads and junction at Stewley Cross remain, and become the eastern extent of the service road. Slip road access from the westbound carriageway onto the service road should be provided at this point. This would enable local traffic from Ilminster heading for Kenny, Wood Road,	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.	No

	West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	they would allow the existing road to be converted to a local route, connecting to the new Village Road bridge and providing connectivity between Ashill and Hatch Beauchamp, keeping access to properties along this route.	Folly Drove, Meadow View, Staple Fitzpaine Road, Bickenhall Lane and Hatch Beauchamp to bypass Ashill village. This proposal provides a very important part of an ALARP solution to this section of the scheme.	Overall, National Highways believes the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.	
114	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? To summarise, they would allow the existing road to be converted to a local route, connecting to the new Village Road bridge and providing connectivity between Ashill and Hatch Beauchamp, keeping access to properties along this route.	Without the slip road access at Hatch Beauchamp Village Road South and on the western and eastern ends of an extended service road it is estimated that some 2000+ vehicles a day will be diverted through Ashill village to reach the junction on its eastern boundary. National Highways must acknowledge that this traffic increase poses a severe safety risk on residents. Although ALARP level mitigation is a mandatory requirement, no mitigation at all has been incorporated. The proposed Stewley Link is inconsequential in reducing this traffic. With numerous residential developments within Ashill already approved the risks to safety and general well-being will grow from National Highways' under estimated baseline. All the advantages provided to the village by the building of the Ashill bypass will be taken away, negatively changing the whole character of the village.	<p>Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.</p> <p>The forecast traffic model developed by National Highways indicates that there would be an increase in traffic through Ashill village as a result of the A358 scheme. The road through Ashill was the Old A358 before the Ashill bypass was built. It is of single carriageway standard and was originally designed to accommodate significantly higher traffic volumes than currently use it. Personal injury accident records do not highlight a safety issue in and around Ashill village. There have been no personal injury accidents along the Old A358 through Ashill since 2007, apart from at the junction with the A358 mainline which will be closed as part of the proposed A358 scheme. The A358 scheme will not lead to significant increases in overall trip mileage for journeys to and from communities local to the A358 corridor.</p> <p>Despite the increase in traffic through Ashill that is forecast as a result of the scheme, the traffic volumes on the road will remain low at around 150 vehicles per hour during the busiest peak hours of a typical day in 2046, which is the equivalent of 2 to 3 vehicles per minute during the busiest time of day. Mitigation measures included in the design on the road through Ashill will enhance safety by adding physical changes to the road layout that will help manage travel speeds through the village.</p> <p>National Highways has also been engaging closely with Somerset Council as the local highway authority for advice and comment on the local road network. During this stage of scheme development, National Highways and Somerset Council have jointly developed a Local Roads Strategy (LRS) and Local Roads Assessment (LRA) for the scheme. The LRS assesses suitable design methodologies and standards for those parts of the local roads network affected by the scheme while the LRA identifies risk and proposed mitigation. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).</p>	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
115	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	As explained in Figure 10-1, A358 Technical Traffic Note, traffic from Staple Fitzpaine, Curland, New Town and Bickenhall areas wanting to go towards Taunton will have to use this new Bickenhall Lane bridge enroute to and from Mattock's Tree Green junction. Without the scheme most of this traffic would enter or leave the A358 south of Hatch Beauchamp, bypassing the village. With the scheme this traffic will be diverted into Hatch Beauchamp through Bickenhall Lane East, shown in the Google Streetscene below, a narrow single-track lane. At the junction with Village Road this traffic would turn left and drive through the centre of the village, passing the village green, a children's play park and a large residential and nursing care home. Similarly, Hatch Beauchamp residents who live on the southern side of the village and who would, without the scheme, use Bickenhall Lane East and Village Road South to access the A358 will, with the scheme, be diverted north through the village centre to access the A358 at Mattock's Tree Green junction. The reverse would occur in traffic travelling from Mattock's Tree Green junction. There would be no compensating reduction in traffic through Hatch Beauchamp from the Curry Mallet and Beercrocombe area as their routing remains the same without and with the scheme. The overall impact of not providing access to the A358 south of the village, estimated from SAR traffic data, will be 800-900 more vehicles a day passing through the centre of Hatch Beauchamp. (3 images provided)	Following the feedback received at statutory consultation the scheme design has been amended. Bickenhall Lane overbridge will now no longer be open to motorised vehicles. Instead, only local landholders and non-motorised users will be permitted to use the bridge.	Yes
116	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users?	National Highways uses prescribed modelling to forecast the impact of the scheme on local traffic. From consultation discussions it is clear that the large number of variables that include traffic flow rates, traffic types (ranging from HGV, large and often very dirty farm machinery through to residential cars and WCH), destinations, road/lane capacity, seasonal farm traffic, driver preferences and behaviour, road/lane maintenance standards, impact of weather and seasons, etc. makes predicting the impact of the scheme particularly challenging. However, in spite of the logic presented in (1) above, National Highways insists the impact of the scheme on Hatch Beauchamp village will be negligible.	The scheme design has been amended following the feedback received at statutory consultation. Bickenhall Lane overbridge will now be closed to the general public travelling by motorised vehicles but will remain open for local landholders and non-motorised users. While the impact on traffic through Hatch Beauchamp is forecast to have no notable impact even with Bickenhall Lane overbridge open to motorised vehicles, this design change will further reduce the potential for additional traffic passing through Hatch Beauchamp as a result of the scheme.	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	base their Response on CoP				
117	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	Local parishes voiced their concerns at the lack of access to the scheme south of Hatch Beauchamp throughout the consultations that took place in 2019 and during 2021. Indeed the 2019 SAR included the requirement for a junction south of Hatch Beauchamp (Section 3e)(1) refers) but it was removed without any published analysis following a Highways' England Executive cost cutting exercise (Obtained through FOI/2578. Full SGAR 2_Redacted - End of Stage Report - 2019.05.24) that decided the scheme would proceed without any 'extras' like the Hatch Beauchamp junction. The Community of Parishes has continued to present proposals to mitigate the adverse impact of the scheme within this section.	National Highways considers the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.  Traffic modelling indicates that an additional junction east of Hatch Beauchamp with slip roads allowing access to and from Hatch Beauchamp would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	No
118	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council,	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	The first assumed the Bickenhall overbridge was not present. As Bickenhall Lane is a busy local route favoured by farm traffic and lorries, the lane needs to be kept open by extending the planned service road from Ashill to Hatch Beauchamp overbridge to Bickenhall Lane. A CD 122 Layout A Option 1 taper merge slip road access should be provided onto the westbound carriageway at the western end of this extended service road.  Offset savings will be made by not requiring suitability assessments of the diversionary routes proposed and the improvements that would be required on these routes to make them acceptable. An example of this type of junction is at the A356/Ringwell Hill/A303 connection at Bower Hinton. National Highways objects to this proposal on cost grounds, the interest of other stakeholders and the impact on Bickenhall Wood. The latter experiences an adverse impact from the Expressway itself (PEIR, Table 16-1), so moving the carriageway slightly to accommodate a slip road could bring overall benefit to the wood. (Diagrams provided)	National Highways acknowledges that Bickenhall Wood is an ancient woodland and hosts a number of nationally protected species such as bats. The ES includes quantification of the area at Bickenhall Wood impacted by the scheme (Document Reference 6.2)  The scheme alignment has been designed to avoid this woodland and other ancient woodlands across the scheme. Bickenhall Lane overbridge has been relocated approximately 165m south of the ancient woodland so as to avoid direct impacts upon the ancient woodland. Following discussion with Natural England an access track off the Bickenhall Lane overbridge has been designed to avoid significant impacts upon the ancient woodland, details of which are provided within the ES. Other areas of existing woodland have been retained or protected where possible or minimised through design. Where these woodlands are located adjacent to construction areas, appropriate buffers would be established (including a 15m buffer between area of works and woodland edge) and fencing utilised to maintain root protection zones as detailed within the ES Appendix 7.3 Tree Survey and Arboricultural Impact Assessment (Document Reference 6.4).  Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.	Yes

	Corfe Parish Council. Ilminster Town Council will base their Response on CoP				
119	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	The second proposal assumed the bridge is built. In this case the western end of the service road should terminate at the existing Staple Fitzpaine junction, from which point a CD 122 Layout A Option 1 taper merge slip road should be provided onto the westbound carriageway. The service road with this on-slip enables traffic from Kenny, Wood Road, Folly Drove, Meadow View, Staple Fitzpaine Road and Hatch Beauchamp Village Road to efficiently access the westbound carriageway. Highways England's 2017 traffic data indicated some 2500 vehicles accessed the existing A358 from roads leading into the scheme's service road. This local traffic, which will continue to grow, must retain access to the new A358 rather than the scheme route via Hatch Beauchamp to Mattock's Tree Green junction and Ashill to Ashill junction. (Diagram provided)	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  Overall, National Highways believes the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.	No

Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm Units.	As the community of local parishes recommended this connection it is strongly supported.	National Highways acknowledges the general support received in relation to the design proposals.	N/A
122	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council,	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358?	The Stewley Link will have an inconsequential impact on the traffic through Ashill. Although the link would bring benefits to WCH users it will exacerbate severance of the Ashill parish and create difficulties for farmers working land both sides of the A358. Furthermore, the land required for the link is considerable, making at least one farmer's enterprise uncommercial. There is, therefore, a strong case for an overbridge at Kenny as proposed as part of the Preferred Route in the 2019 SAR.	The proposed Stewley link road will allow traffic from Stewley to access Ashill village via the proposed overbridge at the Ashill junction. The amount of traffic that would use Kenny overbridge would not justify its inclusion in the scheme design, given that there will be overbridges at Village Road and at the Ashill junction that will allow traffic to cross over the A358.  Following statutory consultation feedback, National Highways has amended the scheme design to include a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	No

Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	Support for this proposal is qualified.	National Highways acknowledges the general support received in relation to the design proposals.	N/A
124	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council,	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	Broadway's current direct connection to the A358 is important to the village, not just as a means for villagers to travel for work, leisure and health reasons to local or more distant destinations, but for residents in the wider area, notably in Ilminster and to the east, to reach the services Broadway provides. These include the over 2,000 people registered with Broadway's Church View Medical Centre who live outside the parish, mainly in or near Ilminster, or the families of children attending Neroche Primary School who travel to the village during term time. The community objective from the outset has been to ensure that these important flows in and out of the village via Broadway Street are neither discouraged nor diverted to local roads in the village or via other communities in the area, like Horton and Ashill.	The scheme will retain connectivity via the proposed Broadway Street link connecting Broadway Street and Thickthorn Lane to the proposed Ashill junction. The connection to Broadway Street via Suggs Lane will be unaffected by the scheme.	N/A

125	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	The proposed link connecting Broadway Street and Thickthorn Lane to the proposed Ashill junction achieves some of this objective. Accordingly, there is support for National Highways' proposals for Broadway Street in this respect. However, National Highways' plans fail to provide direct access to Broadway off the A358 for eastbound traffic. Such traffic would have to use the less convenient Ashill junction, involving an unrealistic additional 3.2 miles for a round trip from Southfields roundabout, twice the distance compared to the Suggs Lane route. There is significant local concern that those wishing to reach Broadway for medical, educational, social or employment purposes may be discouraged from doing so or would use the shorter route via Suggs Lane, which is totally unsuitable for increased levels of traffic.	Traffic forecasts indicate that there would be no perceivable level of change in traffic volumes along Suggs Lane as a result of the scheme.	No
126	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council,	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	The solution to this problem is to provide an off-slip road for westbound A358 traffic at Broadway Street. National Highways' refusal to agree to this access is justified through its adoption of the GD300, Expressway standard, for the whole route. To date, no explanation has been provided as to why adoption of this standard is more relevant to the circumstances of the route than the standard adopted, for instance, for the Sparkford to Ilchester section of the A303 currently under construction. That section of the A303 will have slip roads of the type needed at Broadway Street.	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural	No

	Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP			<p>traffic to join the strategic network in a safe way via a limited number of junctions. National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p> <p>Overall, National Highways believes the proposed junctions, local road connections and walking, cycling and horse-riding facilities provide appropriate connectivity as part of the scheme.</p>	
127	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	The path for walkers, cyclists and horse riders proposed between Broadway Street and Horton Cross via the abandoned A358 is strongly supported.	Responding to the consultation feedback, a new overbridge at Jordans Farm would replace the previously proposed route under the A358 through Ding bridge and strengthen the off-road network in this location. It would connect the Old A358 at Horton Cross, Broadway Street and Cad Road and be classified as a restricted byway. The overbridge would be shared use with the landowner and very lightly trafficked.	Yes
128	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing	The spur off the northern roundabout to Henlade is considered unwarranted and local traffic to and from Henlade should flow via the existing Thornfalcon junction modified as required to provide the necessary connections to the A358. This would discourage a rat-run developing through Henlade and Creech St Michael. It would also reduce costs and reduce the impact the junction will have on the local landscape, including light pollution, particularly from the west. Parishes have similar concerns about a rat-run developing through Stoke St	The design of the Mattock's Tree Green junction has been revisited following feedback received at public consultation. Having two junctions (a signalised crossroads and the northern dumbbell roundabout that would link to the slip roads onto the new A358) in close proximity to each other could lead to operational issues with queues associated with the two junctions potentially impacting on the operation of the adjacent junction. To avoid this issue the preference is for a single junction in this location and so the proposed link to Village Road (Hatch Beauchamp) now connects directly into the roundabout.	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	A358, the A378 Langport Road and Ash Road?	Mary, so any final design must mitigate against this outcome by restricting traffic along Ash Road. Although National Highways has recently concluded the proposal to retain the existing Thornfalcon junction would result in a junction that performs less well in both highway safety and traffic management terms we believe there is a strong case for reviewing the Mattock's Tree Green junction as a whole. In its conclusion National Highways did note that potential refinements were possible following the outcome of the statutory consultation.		
129	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for Southfields roundabout?	The current route of the A358 (West) presents 2 significant problems for motorists. These are the congestion, pollution and safety issues at Henlade and the regular congestion experienced at Southfields roundabout. National Highways' proposals provide a solution to the first of these, but will make the second worse. In the process they also ignore at Southfields roundabout the engineering design standards they are imposing elsewhere along the route.	Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.  The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.	N/A
130	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch	To what extent do you agree or disagree with our proposals for Southfields roundabout?	Presently at Southfields roundabout, traffic on the A303 (East) Ilminster bypass travelling to Devon and Cornwall passes in front of the B3168 (Ilminster) before taking the A303 (West) towards Honiton. With this arrangement and with current levels of traffic, there is already congestion at peak and other times on all 5 approach legs of the roundabout. National Highways' proposal is to re-route	Operational modelling of Southfields roundabout indicates that the junction, including its approach arms from the B3168, A303(West) and A358(South), will operate within the junction's practical capacity. This means that drivers negotiating the roundabout would not experience increased congestion at the roundabout compared to without our scheme in place.  The A303/A30 route through the Blackdown Hills will remain a possible route that can be	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		the westbound A303 traffic around the roundabout towards Taunton and so across in front of 3 approach legs. In the process, and for the only time since the M3, this takes such traffic away from the geographically shortest route on the national highway network to Honiton and the South West. The result of this, combined with the major increases in traffic National Highways predict by the 2043 design year and the creation of 3 circulatory lanes rather than the present 2, will be to make traversing the roundabout more challenging for vehicles emerging from the B3168 (Ilminster), the A303 (West) and the A358 (South). That will result in increased congestion, particularly on the B3168 (Ilminster) and the A358 (South) approach legs. It also provides westbound A303 traffic with the opportunity to take the logical, shorter and presumably in future less busy A303 (West) route, defeating one of the purposes of the A358 improvement.	chosen by drivers travelling to and from the South West peninsula. The case for the A358 scheme does not rely on all strategic traffic travelling along the A303 corridor to switch from the A303/A30 route through the Blackdown Hills to the new A358. The scheme will provide network resilience, particularly during the summer peak period, when the A303/A30 route can become very congested.	
131	Community of Parishes: Beericrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for Southfields roundabout?	Nor will the provision of a segregated left turn lane off the A358 (West) approach to the roundabout significantly improve matters. The diversion of traffic from the South West peninsular heading to the A303 (East) via junction 25 of the M5, coupled with the increases in traffic predicted by National Highways, will substantially increase the number of vehicles approaching the roundabout. This, with the shortness of the segregated lefthand turn lane as it leaves the A358 (West) and joins the A303 (East) and the sharpness of the curve in the segregated lane, will cause congestion on that lane, potentially spilling back onto the A358 (West).	Our operational modelling of Southfields roundabout indicates that traffic would be able to freely access the segregated left turn lane from the A358 (North) to the A303 (East). Queueing from the 2 lanes that approach Southfields roundabout from the A358 (North) would not extend back to where the segregated left turn lane starts, even during peak hours.	N/A
132	Community of Parishes: Beericrocombe Parish Council,	To what extent do you agree or disagree with	The answer to these problems is to build a grade-separated junction at Southfields, separating long-distance from local traffic by providing a seamless connection between the A303 (East) and the A358	Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve	No

	Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	our proposals for Southfields roundabout?	(West). Minimal changes would then be required to the roundabout and westbound traffic would be more easily encouraged to the M5 rather than the A303 (South). The Highways Agency has already proposed such an arrangement in 2007, as the graphic below shows: (Diagram provided)	<p>the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).</p>	
133	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for Southfields roundabout?	National Highways' refusal to agree to this not only condemns local communities in the area to even more congestion at the roundabout, but it also encourages rat-running along local roads for the foreseeable future. This has implications not considered by National Highways for communities like Donyatt and Sea. Significantly, as already explained in the answer to Question 1a, it also ignores the standards enshrined in GD300, which National Highways is imposing elsewhere on the route. National Highways' decision to build the route as a Level 2 Expressway requires junctions at either end to be grade-separated, as stated in E/6.9 of GD300. At Southfields, National Highways will not be meeting their own obligatory standards. In the absence of either justification or explanation, National Highways should revert to the grade-separated junction at Southfields for which plans already exist and for which local support is forthcoming.	<p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. 134	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for Southfields roundabout?	Instead of the limited changes proposed by National Highways at the roundabout, all the following design changes to the roundabout are essential were a grade-separated junction not to be provided.	National Highways acknowledges the comment raised.	N/A
135	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish	To what extent do you agree or disagree with our proposals for Southfields roundabout?	A358 (West) traffic approaching the roundabout As a strategic route in the national road network, it is anticipated that a high proportion of the traffic heading towards Southfields roundabout from the Taunton/M5 direction would use the proposed segregated left turn lane to head east onto the A303 (East) Ilminster bypass. Considering the speed reduction and consequent reduced traffic flow caused by the acuteness of the segregated lane curve at the roundabout, the following measures would help to alleviate the possibility of tailbacks on the dual carriageway: <ul style="list-style-type: none"> <li>• The addition of a significant length of auxiliary lane (similar to that shown in CD 122 Figure 3.30b Layout A option 2 - Single Lane auxiliary diverge) rather than the taper diverge currently proposed;</li> <li>• The introduction of speed reduction measures for traffic approaching both the segregated left turn lane and the A358 approach to the roundabout;</li> <li>• The introduction of real-time congestion warning signage.</li> </ul>	The layout of the segregated left turn lane has been designed in accordance with appropriate standards within DMRB and traffic modelling of Southfields roundabout shows that still operates satisfactorily in the scheme design 15 years after scheme opening. National Highways therefore does not consider there to be a need to introduce an auxiliary lane and diverge from the A358 earlier than proposed.	No

	Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP				
138	Community of Parishes: Beercombcombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for Southfields roundabout?	A358 (South) traffic approaching the roundabout The proposed third approach lane should be converted into a segregated left turn lane so that all traffic joining the A358 (West) from Horton Cross can merge rather than giving way at the roundabout. National Highways should address the impact of a third lane on the safety of vehicles leaving and entering the services off the A358 (South) at this point.	Operational modelling of Southfields roundabout indicates that the junction will operate within its practical capacity. Although not required to increase capacity at the roundabout the possibility of including a segregated left turn lane from the A358 (West) approach from Horton Cross has been examined. This has shown that it would not be possible to incorporate a segregated left turn lane in this location due to spatial constraints as the land boundary of Ilminster services leaves only a narrow strip of land that is within the existing highway boundary. This would be insufficient to allow inclusion of a segregated left turn lane that is compliant with DMRB design standards.  The capacity for traffic approaching Southfields roundabout from the A358 (West) approach has however been enhanced by other means since statutory consultation. The design for the approach has been widened from just west of the Ilminster services junction from 1 to 2 lanes. This means that the 3 lanes at the give way line for Southfields roundabout will now be more effectively fed by 2 lanes of traffic rather than 1 lane.	Yes
139	Community of Parishes: Beercombcombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council,	To what extent do you agree or disagree with our proposals for Southfields roundabout?	Additional proposals at the roundabout There is already significant congestion at peak times and other times on each of the approach legs to the roundabout. No significant physical change to the roundabout itself is proposed. However, the proposed creation of a third circulatory lane on parts of the roundabout would mean that traffic seeking to enter the roundabout from the B3168 (Ilminster) and A358 (South) approach legs would have to cross in front of 3 lanes of traffic rather than the current 2. This would create a significantly more challenging traverse of the roundabout for local vehicles than is currently the case with a lower volume of traffic than National Highways project for the future. To cope with this, the following additional measures are needed at the roundabout. • The permitted speed on the roundabout should be	The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three-lane approach from the A303 (East) approach, a three lane approach from the A358 (West), which also incorporates a signalised junction with Ilminster Services, and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.  The existing 40 mph speed limits at existing roundabouts on the A303 would have been installed due to site specific reasons at those locations. A 40 mph speed limit has not been considered as part of the preliminary design but further liaison with the maintaining organisation will be held during future design stages to seek ongoing feedback on the current performance of the roundabout and its existing speed limit.	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		reduced from the current national speed limit to 40 mph, as is the case of the 40 mph limits at the South Petherton and Amesbury roundabouts on the A303. <ul style="list-style-type: none"> <li>In order to give traffic from lower priority roads, namely the B3168 (Ilminster), the A303 (West) and the A358 (South), a safer and fairer opportunity to use the roundabout, traffic signals (either full-time or part-time) should be installed, as is already the case at Amesbury and Podimore roundabouts on the A303.</li> <li>Subject to the implementation of the first 2 proposals for the roundabout, the vertical profile of its central island comprising banks and foliage should be lowered so that traffic joining the roundabout has better visibility and consequently longer decision times, compensating to some extent for the increased volume of traffic from the A303 (East) joining the A358 (West) to Taunton/M5.</li> </ul>	Traffic signals are not considered to be an appropriate intervention due to the limited space on the roundabout circulatory carriageway between arms for vehicles to wait.  Existing vegetation on the circulatory carriageway would be maintained to ensure appropriate circulatory visibility.	
140	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for Southfields roundabout?	To address a fundamental flaw in the scheme proposals, the opportunity should be taken to provide a grade-separated junction at Southfields, permitting A358 (West) and A303 (East) through-traffic to be separated from local traffic. Without this, the aim of reduced and consistent travel times will not be achieved, even if the design changes proposed above were to be implemented.	Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.  The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).	No
141	Community of Parishes: Beercombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council,	To what extent do you agree or disagree with our proposals for the Ashill junction?	The junction is unnecessarily complicated taking up a large footprint and adversely impacting on the local environment. The route should be built as a trunk road link, with governing DMRB documents CD 109, CD 122, CD 123 and CD 116. Indeed, the 2019 SAR concluded that the route could be simplified if Expressway standards were not applied (SAR, 7.1.8). The 2007 Highways Agency design, shown below, indicates that if the Expressway ideology is dropped a simpler route and	The DMRB standards listed (CD 109, CD 122, CD 123 and CD 116) have been applied for the design of the mainline and junctions.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in	No

	Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP		Separated Junctions, gives a generic layout of a grade separated half-cloverleaf junction, which the community proposal follows. The proposal also minimises land usage and with the slip roads located close to existing junctions their impact on local residents would be minimal. Understandably, without a fully developed design some residents have expressed concern about the impact of the slip roads, combined with the overbridge and possible Capland link. Good design and extended village speed limit would remove those concerns.	benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	
144	Community of Parishes: Beercombombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358?	National Highways dismisses these proposals for very weak, ideological reasons. Irrationally it uses GD 300 as the governing document to dismiss a community proposal that is in accordance with CD 122 standards, whilst ignoring the fact GD 300 prohibits the at-grade priority junctions at Southfields, Nexus 25 and Junction 25 roundabouts.	<p>The Community of Parishes have provided a diagrammatic layout of their suggested junction / slip road arrangement, however a layout in accordance with Figure A.4 of CD 122 would require more landtake and have greater impacts than is suggested by the layout provided.</p> <p>Traffic modelling indicates that an additional junction east of Hatch Beauchamp with slip roads allowing access to and from Hatch Beauchamp would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.</p> <p>The DMRB covers a suite of different standards that are used for the design of motorway and all-purpose trunk road schemes. As with any major highways scheme, there are both scheme specific objectives and scheme specific constraints that must be considered alongside the requirements and advice included within DMRB. As part of the work undertaken during early project stages and announced in June 2019 as the preferred route, it was decided that the scheme was to run between M5 J25/Nexus 25 and Southfields roundabout.</p> <p>At Nexus 25, the signalised junction will serve not only the new A358, but also the connections into the proposed Nexus 25 employment site and to the Taunton Gateway Park and Ride and local connections into Henlade and Creech St Michael. Given this, and the proximity of Nexus 25 to Junction 25, a grade separated junction is not considered to be feasible at this location.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline</p>	No

147	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout?	National Highways reports that there is one large adverse impact to a bridleway where the route will be stopped up, with a further 15 routes experiencing moderate adverse effects as a result of longer journey times as a result of permanent diversions. This conclusion means the scheme fails the GD 300 requirement that WCH facilities should be at least as good as they were and that WCHs should not be disadvantaged by the building of an Expressway (GD 300, E/3.10.1 and E/3.10.3). It also means the scheme fails one of its primary objectives.	The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. Proposals for walking, cycling and horse-riding as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the PRow Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4).  Longer journey times because of diversions or stopping up may lead to adverse environmental impacts, if people use less sustainable modes of travel. However, the GD 300 objective, that facilities should be at least as good as they were by the removal of severance and unlocking of latent demand, has been met.	N/A
148	Community of Parishes: Beercrocombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout?	The proposed upgrades to M5 junction 25 and the Nexus roundabouts do not remove the congestion and delays experienced at these junctions, which will remain at-grade priority/traffic light controlled.	Both M5 junction 25 and the Nexus 25 junction are forecast to operate within their practical capacity during peak hours in the design year of the scheme (year 2046, 15 years after scheme opening). This means that drivers will on average get through the signals on the first occasion that they turn green once they arrive at those junctions and therefore delays at both locations will just be related to a typical signal cycle and will hence be relatively small.	N/A

	Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP				
149	Community of Parishes: Beercombcombe Parish Council, Stoke St Mary Parish Council, West Hatch Parish Council, Hatch Beauchamp Parish Council, Ashill Parish Council, Broadway Parish Council, Ilton Parish Council, Donyatt Parish Council, Horton Parish Council, Curry Mallet Parish Council, Pitminster Parish Council, Combe St. Nicholas Parish Council, Corfe Parish Council. Ilminster Town Council will base their Response on CoP	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout?	Modelling of the performance of the roundabouts presented at the Consultation uses average daily traffic flows, not the high traffic flows experienced during holiday periods. Modelling predicts queuing will occur at the roundabouts even at these average traffic flows and consequently longer queues than reported in the Consultation documents will remain on the new A358 during holiday periods (Webinar, 4/11/21).	Operational modelling of junctions is based on peak hour flows during a 'neutral month' - a typical month of the year outside of the peak holiday season - though sensitivity tests have also been undertaken to assess the performance of junction under summer peak conditions. Our junction modelling confirms that all junctions along the scheme will operate within their practical capacity meaning that all traffic that arrives at the junctions during peak hours is able to pass through the junctions and therefore there would be no gradual build-up of overcapacity queues at these junctions throughout peak hours. Any queuing and delays reported as part of the junction modelling are associated with traffic arriving when the signals are red and waiting for the next instance of the signals turning green.	N/A
150	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	We support initiatives to improve conditions for walkers, cyclists, horse riders and disabled users. We ask that the proposals are kept open for review should it become possible to repurpose parts of the existing A358 as a more direct local movement corridor. We do not dismiss the idea of quiet lanes and roads for leisure use, but also suggest that faster dedicated routes could be beneficial for achieving mode shift for commuting and more regular journeys.	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.	N/A
151	Creech St Michael Parish Council	Do you have any other comments about our plans for Section 1: M5	We have strong reservations regards the proposals for a new connection at Mattock's Tree Junction to the existing A358. Our concerns are that this new spur will work against the efforts to change travel behaviour and make	The fastest and most direct route between M5 junction 25 and Mattock's Tree Green junction will be along the new A358 that bypasses Henlade. A connection from Mattock's	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		junction 25 to Mattock's Tree Green junction?	the Junction 25/Nexus roundabout the relatively more attractive access point to the A358.  Please refer to Question 2a for our detailed response on this part of Section 1.	Tree Green junction to the existing A358 is required to allow for local traffic movements and connectivity.	
152	Creech St Michael Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	We have no comments on the PEI Report but would ask that there is more commitment in the proposals submitted for DCO approval to the use of contemporaneous environmental standards and technologies at both construction and operation stages.	National Highways acknowledges this comment.	N/A
153	Creech St Michael Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	Advances in smart technology and materials should be used as the scheme is built and maintained to ensure that National Highways (NH) are taking full advantage of opportunities to maximise the long-term benefits from the scheme. This could extend to innovation programmes and hackathon initiatives with start-ups, tech innovators and education institutions in the South West.	National Highways is committed to reviewing and adopting innovative solutions, trialling and utilising new materials and methodology within the delivery of its schemes where appropriate.	N/A
154	Creech St Michael Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	We would expect that the environmental standards which the scheme is required to meet during construction and operation are also regularly reviewed and escalated in line with new primary and secondary legislation. We recognise that this would be at the pre-commencement stages of construction and then at fixed intervals once the scheme is operational. We expect that NH will prepare guidelines for how such a review would operate relative to the parameters and performance of the scheme against current environmental standards.	National Highways constantly review the implications of new and emerging primary and secondary legislation, including those related to environment, and how and when these will affect the assets they are constructing or managing (i.e. during construction and operation). National Highways define actions that apply either to construction (to their contractors delivering the scheme) or to their in-house operations/asset management team. In addition, National Highways will incorporate any changes into their standard documents (for example DMRB) and incorporate them into new schemes progressing within the RIS programme. No specific guidance will be produced for the A358 as such changes in legislation will affect all of the National Highways assets in their portfolio.	N/A
155	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Stoke Road is an important local route for residents from Creech St Michael to access Henlade, Stoke St Mary and Haydon. Crossing the junction on the existing A358 at Lipe Lane and Stoke Road is currently very unsatisfactory with long wait times, but also potentially hazardous junction manoeuvres in order to edge into the traffic.  The new bridge over the A358 at Stoke Road will ensure that this situation is not replicated in relation to the new A358. We also see consequential benefits for walking and cycling to be able to cross the new road.	The existing A358 would carry significantly less traffic with the scheme in place. Turning manoeuvres at the A358/Stoke Road junction would be easier and less hazardous, and it would be easier for walkers and cyclists to cross the road.	N/A
156	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	We have strong reservations regards the proposals for a new connection at Mattock's Tree Junction to the existing A358. Our concerns are that this new spur will work against the efforts to change travel behaviour and make the Junction 25/Nexus roundabout the relatively more attractive access point to the A358.	The fastest and most direct route between M5 junction 25 and Mattock's Tree Green junction will be along the new A358 that bypasses Henlade. A connection from Mattock's Tree Green junction to the existing A358 is required to allow for local traffic movements and connectivity.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
157	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	We are concerned that the spur and the ease of access this provides to roundabout north and priority across the roundabout to the slip road to the eastbound new A358 dual carriageway, will prove too enticing for drivers. We have seen increases in traffic using the local roads in Creech St Michael and Ham as cut-throughs and shortcuts which are mainly found when there is an incident on the major route or it is closed for improvement. It is reasonable to assume that a proportion of these adapted journeys continue long-term, despite efforts to change behaviours back to the direct route or access point.	As the northern roundabout forms part of the Mattock's Tree Green junction, the function of which is to provide access to and from the A358 dual carriageway, there needs to be a good connection to the local road network and the slip roads at this location. The A358 will encourage traffic between the A358 and areas such as Monkton Heathfield to stay on the dual carriageway and use the route via M5 junction 25 instead of exiting or joining the dual carriageway at the Mattock's Tree Green junction.	N/A
158	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	We understand that National Highways (NH) have considered the benefits and disbenefits of counter-proposals put forward for this junction arrangement and that the currently proposed arrangement which is subject to this statutory consultation shows that the currently proposed arrangement is appropriate for the volume and movement of traffic. We also understand that this has concluded that retaining the existing Thornfalcon junction would result in a junction that performs less well in both highway safety and traffic management terms, which would clearly not be acceptable. However, we also understand that the current stage of scheme design (design fix #2) represents a point in the overall design programme and that a further stage of scheme design will take place to the fix which is used for the Development Consent Order (DCO) submission.	National Highways acknowledges the comments made in relation to the design of Mattock's Tree Green junction, made at the pre-application consultation stage. The proposed design as part of the DCO application accounts for consultation feedback from the statutory and supplementary consultations and is considered the most appropriate for the volume and movement of traffic in this location. This includes a change from the statutory consultation proposals where a new direct connection from Village Road to the northern roundabout of Mattock's Tree Green junction is now proposed.	N/A
159	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	NH have indicated that the current proposals will be reviewed following the outcome of this statutory consultation to understand wider feedback on this particular design element. We strongly request that NH investigate alternative layouts to the Mattock's Tree Green junction which not only meet the highway safety and traffic management requirements, but also seek to maximise the relative attractiveness of the Junction 25/Nexus Roundabout as the key point of access for traffic in Section 1 to the new A358. In making this suggestion we include the need to steer our own communities towards use the Nexus roundabout access point. We strongly request that this investigation is carried out in partnership with Somerset Council (SCC) and as part of a package of consequential design changes to the existing A358 which we request are included as illustrative scheme material alongside the design fix which is used for DCO submission.	The layout of the Mattock's Tree Green junction has been reviewed based on feedback received at consultation. The northern dumbbell roundabout has been modified to tie in the Village Road Link from Hatch Beauchamp. This has improved the safety of the design as there will now not be a roundabout and a separate priority junction in close proximity to each other.  It will be possible for traffic from Henlade, Ruishton, Thornfalcon and Creech St Michael to access the A358 either at the Nexus 25 junction or at Mattock's Tree Green. From most locations within these villages, it will be shorter and faster to travel along the existing A358 towards the Mattock's Tree Green junction and join the dual carriageway to travel eastbound towards Southfields roundabout from there. This is due to the layout of the local road network in the area that means traffic would have to 'double back' on itself to access the A358 at the Nexus 25 junction if travelling eastbound towards Southfields roundabout.  The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.	Yes
160	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for	We understand that managing traffic behaviour is a responsibility of all statutory highway authorities (national, strategic and local) and we suggest that this	National Highways has proposed local road improvements as a result of changes in traffic flows which are considered appropriate to the nature of the local road network and has developed these in conjunction with Somerset Council as the local highway authority.	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	coordination of effort needs to be more visible and tangible as the scheme approaches DCO submission. This coordination will be vital to give communities the comfort that best endeavours are being used by all agencies to maximise the transport, environment and social benefits of the scheme and to use their parallel powers and duties to optimise these benefits.	Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	
161	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	We will be sending a copy of this consultation response to the Leader of SCC (who also chairs the Somerset Council Local Government Reorganisation joint committee), to emphasise how important it is that the statutory roads authority for the existing A358 work in partnership with NH and the Parish Councils.	National Highways acknowledges this comment and welcomes continued engagement with the parish councils.	N/A
162	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Creech St Michael Parish Council (CSMPC) support in the strongest terms a new dual carriageway A358 bypass as the primary means to address the issues of vehicle congestion, road safety, noise and air quality on the route of the existing A358 through Henlade and to consequently help provide a reduction in the volume of traffic choosing to use the unclassified St Michael Road in Creech St Michael as a cut through to the A38.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
163	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	CSMPC support in the strongest terms the upgrade proposals for M5 junction 25 and the Nexus roundabout as the primary means in Section 1 by which traffic will be encouraged to access the new dual carriageway A358 bypass. We understand the rationale for these elements of the proposals are to make this route and these points of access as relatively attractive as possible compared to other points of access, and therefore encourage established traffic patterns to switch route access points.	National Highways acknowledges the support received in relation to the M5 junction 25 and Nexus 25 proposals. Following further traffic modelling and design development, a signalised junction to replace the Nexus 25 roundabout is now proposed, as presented at the 2022 supplementary consultation.	Yes
164	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Traffic in Creech has grown in recent years by a surprising amount. In 2019 there were 5800 vehicle movements a day on St Michael Road, itself a major growth from previous years (as many as the A378 road to Langport). In a year this had grown to 8300 per day when measured just before lockdown in early 2020. As recognised in commentary on the Section 2 webinar, much of the traffic choosing to use the route through Creech St Michael (St Michaels Rd and Lipe Lane) is from the new Monkton Heathfield urban expansion, and the closure and works at Creech Castle are currently serving to cement this rat-run in drivers' minds as an access route. The desire line along St Michael Road is now very strong for local traffic connecting between the A38/Taunton and the A358.	The A358 scheme will improve congestion issues and therefore travel times for the route via M5 junction 25 and Toneway. This, in conjunction with the improvements to the Creech Castle junction on the A358 Toneway, which have now been completed, will encourage some traffic that was observed to travel via Creech St Michael to switch away from that route.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
165	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	CSMPC understands that the assumed traffic reductions through Creech St Michael as a result of this increased attractiveness are as below (extracted from A358 Technical Traffic Note [HE551508-ARP-GEN-ZZ-RP-TR-000006] Figure 9-1). But that these decreases are on the assumption of the A358 proposals being implemented alone, i.e., they are not a cumulative picture of decreases with other initiatives at the local, district, county, (or unitary) levels.	Other enhancements that are committed on the road network are included in the National Highways forecast traffic model too, but these are included in both the scenarios without and with the scheme as they are not linked specifically to the A358 Taunton to Southfields Dualling scheme. The traffic outputs showing the impacts of the A358 scheme are based on a comparison of a future scenario without the A358 scheme compared to a scenario with the A358 scheme, with all other things being equal.	N/A
166	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Somerset Council (SCC) are implementing a number of local traffic management plan initiatives within the Parish as a result of lobbying from and evidence prepared for CSMPC. The County Council has accepted there is an ongoing issue with traffic volumes in Creech and its effect on pedestrian safety. In the short term they are planning for the effect of major work at Creech Castle and Tone Way, as traffic finds alternative routes, and their proposals for Creech listed here <a href="https://creechstmichael.net/parish-council/road-safety-and-traffic-management/">https://creechstmichael.net/parish-council/road-safety-and-traffic-management/</a> should mitigate the expected traffic growth.	National Highways acknowledges that Somerset Council are liaising with CSMPC on local traffic management plan initiatives. The matters raised will not be affected by the A358 scheme.	N/A
167	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Similar to the A358 access proposals in question 1a, these local traffic management initiatives are aimed at making the route a less attractive option and reduce traffic speeds in the village and so by implication also improve the relative attractiveness of other points of access which are better able to cope with substantial road traffic.	National Highways acknowledges that Somerset Council are liaising with CSMPC on local traffic management plan initiatives. The matters raised will not be affected by the A358 scheme.	N/A
168	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Change in Average Daily Vehicles in 2028 Road Direction Band Creech Heathfield Rd NB -250 to +250 Creech Heathfield Rd SB -500 to -250 St Michaels Rd NB -500 to -250 St Michaels Rd SB -500 to -250 Lipe Lane NB -500 to -250 Lipe Lane SB -500 to -250	National Highways acknowledges this comment.	N/A
169	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	We understand that the scheme proposals for the new A358 dualling address the overriding principle of improvements planned along the A303/A358 corridor in the original Road Investment Strategy (RIS) and subsequent RIS 2. We also understand that the current stage of scheme design (design fix #2) represents a point in the overall design programme and that a further stage of scheme design will take place to the fix which is used for the Development Consent Order (DCO) submission.	National Highways acknowledges this comment.	N/A
170	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	We do consider that there is a missing piece of the jigsaw to changing traffic route options which lies outside the remit of National Highways and CSMPC and this is the future traffic management strategy on the existing A358, which will remain with Somerset Council as the relevant highway authority. The existing A358 will see a significant redistribution of traffic as a result of the proposals, yet the detail in the current proposals could leave residents with an impression that beyond the use of a 30pmh	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place).  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			speed limit on the current dual carriageway sections, there will be no consequential changes to the design or management of the existing A358 as a result of this reduction. We understand that there is very real potential for SCC to look at repurposing some or all of the existing A358 carriageway and that if the new A358 dualling scheme were to proceed there is a very strong likelihood that SCC will be able to attract funds to repurpose the carriageway. This could include such wide-ranging options as: severing the A358 at the bottom of the dual carriageway towards Thornfalcon, creating a local access road only; removing an entire section of the current dual carriageway with two-way traffic sharing the remaining section; removing one lane of each section of the current dual carriageway; and/or, repurposing one lane each way as a dedicated local movement corridor exclusively for walking & cycling (and potentially personal powered transporters as legislation permits).	repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.  Future optioneering or enhancements along the full corridor of the existing A358 to Henlade would then be a matter for Somerset Council as the local highways authority.	
171	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	We strongly request that a package of consequential design changes to the existing A358 are included as illustrative scheme material alongside the design fix which is used for DCO submission. We understand that these would be purely illustrative and contextual and not for approval as part of the scheme for assessment. We strongly request that SCC are involved in this preliminary work and provide a parallel undertaking to the relevant Parish Councils that these illustrative options will be taken forward as part of a statement to investigate the use of designated funds and budget savings from road management and maintenance to deliver a parallel package of improvements on the existing A358 to encourage drivers to choose the new A358.	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place).  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.  Future optioneering or enhancements along the full corridor of the existing A358 to Henlade would then be a matter for Somerset Council as the local highways authority.	Yes
172	Creech St Michael Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	We will be sending a copy of this consultation response to the Leader of SCC (who also chairs the Somerset Council Local Government Reorganisation joint committee), to emphasise how important it is that the statutory roads authority for the existing A358 work in partnership with NH and Parish Councils and implement a parallel programme of works to complement the scheme and optimise the consequential benefits from traffic reduction and changing travel behaviour.	National Highways acknowledge this comment and the importance of partnership working with Somerset Council alongside the local parish councils, throughout the consultation and design of the scheme, and the DCO examination stage.	N/A
173	Curry Mallet Parish Council		I write on behalf of Curry Mallet Parish Council. The Parish Council fully supports the community response that has been put forward by the parishes affected by the proposed changes.	National Highways acknowledges the parish council's support for the Community of Parishes consultation comments and proposals. See responses to each matter raised by the Community of Parishes in this table.	N/A
174	Curry Mallet Parish Council		1. There is a need for a Henlade bypass	National Highways acknowledges the support for a bypass of Henlade.	N/A
175	Curry Mallet Parish Council		2. The roundabouts at Southfields and Taunton would require significant improvement to allow free flowing traffic from the A358. If these improvements are not part of the proposed changes of the A358 the bottlenecks will continue.	National Highways will be making significant improvements to Southfields roundabout, the Nexus 25 junction and M5 junction 25. Operational modelling indicates that all junctions will operate within the practical capacity.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
176	Curry Mallet Parish Council		3. The link between the roundabouts does not need to be an "expressway" which is a sub category of a motorway with all the cost, scale and environmental damage that will come with it.	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.	N/A
177	Curry Rivel Parish Council	Do you have any other comments you would like to make about our proposals?	Concerns re possible diversions through Curry Rivel and Langport Whilst construction takes place. Both these villages have very narrow roads and pavements they already suffer from congestion with many holdups when heavy vehicles try to pass.	A diversion route for closure of the A358 between the A378 and Southfields Roundabout during the works has been agreed with Somerset Council. This will not divert through Curry Rivel and not use the A378 to Langport which has a 7.5t weight restriction. The route will pass through Langport on A372, with HGV's travelling on the B3153 to avoid passing Huish Episcopi School.	N/A
178	Curry Rivel Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Will the construction of the new road entail closure of the existing road during construction and will this result in diversions through Curry Rivel and Langport? If so has considerations been made to the unsuitable road widths through these villages and the current bottle necks?	A diversion route for closure of the A358 between the A378 and Southfields Roundabout during the works has been agreed with Somerset Council. This will not divert through Curry Rivel and not use the A378 to Langport which has a 7.5t weight restriction. The route will pass through Langport on A372, with HGV's travelling on the B3153 to avoid passing Huish Episcopi School.	N/A
179	Donyatt Parish Council	At Capland, which option would you prefer to provide a connection between local villages in this area?	Option 2 – Retain the existing route via Stewley Lane and Stock's Lane and provide localised flood improvements	National Highways acknowledges the response raised.	N/A
180	Donyatt Parish Council	Do you have any other comments you would like to make about our proposals?	I think the dualling of the A358 is a complete waster of taxpayers' money which should be spent on more worthwhile and justifiable projects. The claimed benefits are insignificant and will never materialise as claimed by H.E., especially if a 'holistic' approach is not adopted to include major changes to the Southfields roundabout and access for local people in and out of their communities. All of the local communities are up in arms about this, the construction will cause chaos for years and the long-term disbenefits will affect local communities and the environment way into the future.	Local councils and business leaders agree that upgrading the rest of the A303/A358 corridor to dual carriageway would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.  The scheme includes improvements at Southfields roundabout which will enhance the capacity of the junction. National Highways has undertaken operational modelling that demonstrates that Southfields roundabout will operate within its practical capacity. The benefits of the scheme are forecast to outweigh its costs.  National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including transport users, road safety, wider area impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to see whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient to support delivery. This is reviewed at every stage of work to see whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the DCO is granted.  The proposed scheme is part of the Government's Road Investment Strategy 2 (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the ComMA Report (Document Reference 7.4).	N/A
181	Donyatt Parish Council	Do you have any other comments you would like to make about our proposals?	Finally, there have been continual and egregious failure on the part of in the process of communicating the proposed A358 Dualling measure, and in its response to the numerous and detailed objections and, suggested remediations from the littoral Parishes along the route, as	National Highways considers that the range of activities, materials and engagement provided during the statutory consultation were sufficient in ensuring an adequate consultation for local people and communities to provide their feedback on the draft design and plans for the scheme. The PEI Report and appendices which were published for consultation reflected the available information at the time and National Highways considers	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>follows:</p> <ol style="list-style-type: none"> <li>1. Lack of transparency;</li> <li>2. Misleading and incorrect statements (mile a minute claim, etc);</li> <li>3. Lack of accessibility - only one face to face event held out of normal working hours and that event was held at only one end of the road, and in a venue far too small that people had to queue outside or drove away because of lack of parking;</li> <li>4. Too short a consultation period;</li> <li>5. Misleading and incomplete information on the benefits: <ol style="list-style-type: none"> <li>a. How are these arising?</li> <li>b. Over what period? Is it 'in perpetuity'?</li> <li>c. What Discount Factor has been applied to future benefits?</li> <li>d. Confirmation that only the Taunton~Southfields route is the source of these benefits – not, as advised from time to time, 'all the way from Basingstoke'</li> </ol> </li> </ol>	<p>it contained an appropriate level of detail for people to provide their response. As set out in the Consultation Report (Document Reference 5.1), National Highways considers that consultation was accurate, robust, had an appropriate reach and allowed sufficient time for people and organisations to provide a meaningful response.</p> <p>The consultation period lasted 41 days, which exceeded the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days.</p> <p>More than 900 responses to statutory consultation were received using the variety of response mechanisms that National Highways ensured were available, including the online questionnaire, email and freepost, demonstrating that consultation was accessible and that technical issues did not prevent respondents from providing their feedback.</p> <p>Following the submission of the DCO application for this scheme, the Planning Inspectorate will make the decision whether or not to accept the application and all relevant materials. As part of this process, they will also assess the adequacy of consultation and will seek the views of local authorities on this matter.</p>	
182	Donyatt Parish Council	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	Improved provision for walkers, cyclists and rider.	<p>The proposed improvements are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the PRoW Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4).</p> <p>Midway between Ashill and Southfields junctions, Jordans bridge would allow walkers, cyclists and horse-riders to cross the scheme. It would connect the old A358 at Horton Cross, Broadway Street and Cad Road and be classified as a restricted byway. The overbridge would be shared use with agricultural users and very lightly trafficked.</p> <p>Linear provision for walkers, cyclists and horse-riders would be provided on both sides of the scheme. On the south-western side, a restricted byway would connect Broadway Street, Jordans overbridge and the old A358 at Horton Cross. On the north-eastern side, a new restricted byway would connect Rapps Road and Cad Road, and Cad Road would be largely traffic-free.</p>	N/A
183	Donyatt Parish Council		<p>A358 Dualling: Donyatt Parish Councils' response to</p> <ol style="list-style-type: none"> <li>1) National Highways' proposals and</li> <li>2) the comments/proposals made by the Group of Parishes working party.</li> </ol> <p>We would like to begin by re-iterating our wholehearted support for the working group of Parishes that, like Donyatt, will be affected by NH's proposals to dual-carriageway the A358 between Ilminster and Taunton. The set of counter-proposals, put together by the other Parishes, is an excellent one and much work and consideration of the impact of the proposed changes has gone into this.</p>	National Highways acknowledges the parish council's support for the Community of Parishes consultation comments and proposals. See responses to each matter raised by the Community of Parishes in this table.	N/A
184	Donyatt Parish Council		<p>The current route of the A358 (West) presents two significant problems for motorists.</p> <p>These are:</p> <ol style="list-style-type: none"> <li>1) The congestion, pollution and safety issues at Henlade / Ruishton.</li> <li>2) The regular congestion at the Southfields Roundabout (SR).</li> </ol> <p>Whilst National Highways' (NH) proposals provide a solution for the first of these choke points, their proposals will actually make the second one worse.</p> <p>The two ends of this 8.5 mile section of the A358, i.e.</p>	<p>National Highways agrees that the issues highlighted in Henlade and at Southfields roundabout are two key issues that the scheme aims to address.</p> <p>The scheme includes a bypass of the existing A358 passing through Henlade and this will resolve the congestion and air quality issues currently experienced in the village.</p> <p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields</p>	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>through Henlade/Ruishton in the West and at Southfields Roundabout at Ilminster in the East, are currently the major bottlenecks, causing most of the congestion and delays. The middle section of this route i.e. the part considered for dualling by NH, is the least important, in our view, in terms of requiring updating and improvement as the traffic moves relatively freely on that section.</p> <p>Southfields Roundabout is a particularly important point on the strategic corridor for traffic travelling between the South East and the South West, as it is here that traffic makes a significant change of direction away from the geographically more logical route via Honiton. Moreover, it does so at a location which already suffers from significant congestion at certain times on the roundabout and its' approach roads.</p>	<p>roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.</p> <p>There are other existing safety issues for road users travelling along the A358 corridor due to the many local road junctions connecting onto the A358 and a lack of safe overtaking opportunities. There are also existing problems around journey time reliability linked to the lack of safe overtaking opportunities. The dualling scheme will provide safe overtaking opportunities along the whole length of the A358 between M5 junction 25 and Southfields roundabout.</p>	
185	Donyatt Parish Council		<p>Whilst we broadly agree with NH's proposals for the western end i.e. from Mattocks' Tree Green westwards, their proposals for the Southfield roundabout (SR) are woefully inadequate and don't go anywhere near far enough to rectify the congestion problems there. NH are also choosing to ignore the engineering design standards they are imposing elsewhere along the route e.g. GD300.</p>	<p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.</p> <p>National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p>	N/A
186	Donyatt Parish Council		<p>NH are quoting a 4.5 minute saving in journey time from the SR to Taunton/M5 but this 'saved' time will be more than lost in extra time waiting at the SR. Dualling the A358 will get the eastbound traffic to the SR more quickly and therefore there will be a greater build-up of vehicles queuing to access the roundabout if it is not properly integrated into the overall improvements made.</p>	<p>The journey time savings quoted include the time taken to negotiate Southfields roundabout. The delays that are currently experienced on the A358 (Northwest) approach to Southfields roundabout would no longer occur following the improvements proposed to the junction as part of the scheme. This is because the capacity on the approach from the A358 (Northwest) would be significantly enhanced through provision of a segregated left turn lane and through increased capacity onto the roundabout by providing a two-lane approach rather than a single lane approach that flares to 2 lanes just before the give way line to the roundabout, as is the case in the existing junction configuration.</p>	N/A
187	Donyatt Parish Council		<p>The SR is not just a minor roundabout stuck at the end of this route, it is integral to the smooth flow of traffic for this whole section of the A358. Therefore, there is absolutely no point in dualling this section of the A358 if both ends of it are not given the same level of priority.</p>	<p>National Highways agrees that resolving the existing capacity issues at Southfields roundabout is a key element of the scheme. The operational modelling of Southfields roundabout confirms that the scheme design will achieve this.</p>	N/A
188	Donyatt Parish Council		<p>The SR needs a major review, way beyond the 'tweaking' suggested in NH's proposals. If this is not done then a fair section of the newly-dualled A358 will become a giant lorry and car park to the West of Ilminster, leading to more delays and frustration for drivers.</p>	<p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline</p>	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.</p>	
189	Donyatt Parish Council		In short, however much is ultimately spent on dualling the A358 and on changes to the West, this will be totally wasted if the SR is not included in the current programme of updating and improvement.	<p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.</p>	No
190	Donyatt Parish Council		<p>Currently at the SR, traffic on the A303 (East) Ilminster bypass heading for the South West passes in front of the B3168 to Ilminster before taking the next exit onto the A303 (then A30) West towards Honiton.</p> <p>With this arrangement and with current levels of traffic, there is already congestion at peak times on all 5 legs of the roundabout. NH's proposal is to re-route this traffic further around the roundabout, thus crossing three approach legs instead of one and then taking it onto the newly-dualled A358 to Taunton. This will make it a nightmare for motorists trying to access the SR from any of the 'local' roads and will result in increased congestion, particularly on the B3168 (Ilminster) and the A358 (West to Chard / Axminster) approach legs. This together with NH's proposal for a third lane around the SR, will make it even more challenging for drivers entering and leaving it on these other roads and therefore we are opposed to this. Also, and at the only location from the end of the M3, this takes traffic away from the geographically shortest route on the National Highway network to Honiton and the South West.</p> <p>It will present West-bound A303 traffic with the choice as to whether to take the logical, shorter and presumably less busy A303 (West) route, thus potentially undermining and defeating one of the purposes of the A358 improvement, or are persuaded to take the longer</p>	<p>Whilst there will be an increase in traffic turning from the A303 (East) Ilminster Bypass to the A358 (Northwest) as a result of the scheme, a large proportion of traffic that would have passed through Southfields roundabout from A303 (East) Ilminster Bypass to A303 (West) without the scheme, will continue to make the same turning movement with the scheme in place.</p> <p>National Highways has undertaken operational modelling that confirms that all approaches will operate within the practical capacity of the junction. The operational modelling takes into account the changes in turning movements that are forecast at Southfields roundabout as a result of the scheme.</p>	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			route. The success or failure of this revised A358 / M5 route will depend on how many drivers can be persuaded to use it (see item 6 on page 3).		
191	Donyatt Parish Council		If NH are serious about re-engineering this section of the A358 then the SR will need more radical changes than those proposed.	The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.	No
192	Donyatt Parish Council		We have always felt that there should be a 'straight-through' facility for the busiest road at the SR i.e. the A303 and initially felt that this should be A303 to A303 via a flyover or underpass. However, having given this further discussion and having looked at traffic volumes in more detail we have come to the same conclusion as the Parish Group as follows: The answer to all of the aforementioned problems at the SR is to provide a 'straight-through' facility for A303 to A358 (and vice-versa) traffic by building a new grade-separated junction just to the North of the SR (an empty field at present) . This would keep traffic, travelling from the East on the A303 and wanting to continue to Taunton and M5 via the A358, off of the SR altogether, reducing traffic volumes using the roundabout by around 50% or more. The Parish Group (PG) has recommended this improvement and we at Donyatt fully support them in making this recommendation.	Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.  The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).	No
193	Donyatt Parish Council		If this new junction were to be created, minimal changes would then need to be made at the SR and South West-bound traffic would be more easily 'encouraged' to the M5 rather than the A303/A30 South. NH's refusal to agree to this new junction not only condemns local communities in the area to even more congestion at the roundabout, but it also encourages rat-runs along local roads for the foreseeable future. This has implications not considered by NH for communities all along the A358. All of the roads through the villages on either side of the A358 are single lane roads that are used not just by vehicles but also pedestrians, cyclists and horse-riders. If the SR chokepoint is not resolved a significant portion of the long-distance traffic will come off of the A358 looking for ways around the SR bottleneck, contesting for space on these back roads and creating 'rat-runs' in the process. The effect on Ilminster Town Centre of a significant increase not only in overall vehicle numbers, but more worryingly HGV's, is perhaps the most alarming consequence of failure to resolve the SR chokepoint.	Operational modelling of Southfields roundabout confirms that the junction will operate within its practical capacity. This will eliminate the amount of traffic using alternative routes currently experienced in the area by reducing delays at Southfields roundabout and by making journeys via the roundabout faster than via alternative local roads.	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
194	Donyatt Parish Council		Our comments on other potential changes at the SR are as follows: 1. A third inner lane could be incorporated on the A358 South (coming from Chard) and continuing around the corner directly onto the A358 West to Taunton. Vehicles using this lane would not need to encounter the roundabout traffic flow at all as it would filter round to the left and then merge with the A358 westwards. There is a wide grass verge at this location which could easily accommodate a third lane, this is an excellent idea and would be inexpensive to implement.	Operational modelling of Southfields roundabout indicates that the junction will operate within its practical capacity. Although not required to increase capacity at the roundabout the possibility of including a segregated left turn lane from the A358 (West) approach from Horton Cross has been examined. This has shown that it would not be possible to incorporate a segregated left turn lane in this location due to spatial constraints as the land boundary of Ilminster services leaves only a narrow strip of land that is within the existing highway boundary. This would be insufficient to allow inclusion of a segregated left turn lane that is compliant with DMRB design standards.  The capacity for traffic approaching Southfields roundabout from the A358 (West) approach has however been enhanced by other means since statutory consultation. The design for the approach has been widened from just west of the Ilminster services junction from 1 to 2 lanes. This means that the 3 lanes at the give way line for Southfields roundabout will now be more effectively fed by 2 lanes of traffic rather than 1 lane.	Yes
195	Donyatt Parish Council		Our comments on other potential changes at the SR are as follows: 2. The permitted speed limit around the SR should be reduced from the current 60mph National Speed Limit (which is absolutely ridiculous) to either 30 or 40 mph (as at the Amesbury and South Petherton roundabouts on the A303).	The existing A358 (West), A358 (Northwest), A303 Ilminster bypass and A303 (West) are all currently national speed limit approaches to the Southfields Roundabout. The existing B3168 is subject to a 40mph limit with National Speed Limit applicable on the approach. The current proposal for the A358 west for this scheme, reduces this to 30mph due to the inclusion of the signalised crossing. All other approaches will remain as existing.  Vehicles will be reducing speed on the approach to the roundabout to anticipate any potential queuing traffic. Advance Direction Signage (ADS) on the proposed widened A358 approach at 1, 0.5 and 0.3 mile intervals provide road users with warning of the junction ahead. National Speed limit is an advisory maximum limit and not a target.  The existing 40mph speed limits at existing roundabouts on the A303 would have been installed due to site specific reasons at those locations. A 40mph speed limit has not been considered as part of the preliminary design but further liaison with the maintaining organisation will be held during future design stages to seek ongoing feedback on the current performance of the roundabout and its existing speed limit.	No
196	Donyatt Parish Council		Our comments on other potential changes at the SR are as follows: 3. In order to give traffic from the lower priority roads, namely the B3168 (Ilminster), the A303 (West) and the A358 (South), a safer and fairer opportunity to use the SR, traffic-signals, either full-time or part-time should be installed on the roundabout, as is already the case at the Podimore and Amesbury roundabouts on the A303. The addition of congestion-warning signs would also be of benefit.	Southfields roundabout is smaller than the two examples of roundabouts along the A303 referred to in the comments. Podimore roundabout is comparable in terms of number of approach arms, but is much larger in size and therefore has a much larger queue storage capacity on its circulatory. Amesbury roundabout only has 4 approach arms and is also larger in size than Southfields roundabout. The smaller size of Southfields roundabout would leave insufficient queue storage capacity on the circulatory carriageway to implement signalisation without detrimental impacts on the overall operation and capacity of the junction. This would increase the risk of the junction becoming grid locked. In order to signalise Southfields roundabout the circulatory would need to be enlarged, which is not feasible given the constraints around the junction.	No
197	Donyatt Parish Council		Our comments on other potential changes at the SR are as follows: 4. Speed-limit signs should be placed on all approach roads to the SR to slow the traffic in its' approach to the SR. This signage, particularly on the A303 from both directions, should be placed well in advance of reaching the roundabout, thus avoiding any sudden braking close to the SR.	The existing A358 (West), A358 (Northwest), A303 Ilminster bypass and A303 (West) are all currently national speed limit approaches to the Southfields Roundabout. The existing B3168 is subject to a 40mph limit with National Speed Limit applicable on the approach. The current proposal for the A358 west for this scheme, reduces this to 30mph due to the inclusion of the signalised crossing. All other approaches will remain as existing.  Vehicles will be reducing speed on the approach to the roundabout to anticipate any potential queuing traffic. Advance Direction Signage (ADS) on the proposed A358 (West) approach at 1, 0.5 and 0.3mile intervals provide road users with warning of the junction ahead. National Speed limit is an advisory maximum limit and not a target.  The existing 40mph speed limits at existing roundabouts on the A303 would have been installed due to site specific reasons at those locations. A 40mph speed limit has not been considered as part of the preliminary design but further liaison with the maintaining organisation will be held during future design stages to seek ongoing feedback on the current performance of the roundabout and its existing speed limit.	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
198	Donyatt Parish Council		<p>Our comments on other potential changes at the SR are as follows:</p> <p>5. The creation of an additional ( third ) circulatory lane on the SR, as proposed by NH, without increasing the overall size of the roundabout, would mean that traffic seeking to enter the roundabout from the B3168 (Ilminster) and A358 (South) approach legs would have to cross in front of three lanes of traffic rather than the current two. This would create a significantly more challenging traverse of the roundabout for local traffic and will make access from all approaches more difficult and increase the likelihood of shunts and accidents on the roundabout. We are therefore totally opposed to this proposal. We feel that the inclusion of a grade-separated junction to the North of SR would obviate the need for this extra third lane on the SR, which in and of itself would do more harm than good.</p>	<p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).</p>	No
199	Donyatt Parish Council		<p>Our comments on other potential changes at the SR are as follows:</p> <p>6. If NH, against the wishes of the local parishes, decide to push ahead with the dualling of the A358, then everything should be done to 'encourage' the use of the newly-dualled section of the A358 West between the SR and Taunton, rather than traffic continuing to use the A303 South to Honiton and Exeter/M5. This would include getting this message across to drivers via organisations such as The Road Haulage Association, AA Route Planning and SatNav systems etc. and by having informative signage along the route stating this as the preferred option. It is pointless spending all this money on dualling the A358 if drivers are not convinced it is the best route to the South West.</p> <p>Interestingly, the mileage from the SR to J29 of the M5 at Exeter via the A303/A30 is 31.1 miles, the mileage to the same destination via the newly-dualled A358 and the M5 South is 41 miles, that's an increase of 30%, something NH have not mentioned anywhere in their proposals.</p> <p>Despite this difference in mileage and the environmental impact this will have through increased pollution and CO2 levels along the A358, West, the A358 to Taunton/M5 route would be better, if properly updated to include the Southfields Roundabout, not just for commercial reasons but also by keeping significant numbers of vehicles off of the often steep and winding A303 through the Blackdown Hills AONB.</p>	<p>The proposed signage strategy directs road users onto the proposed A358 for access to the M5. The aim of the proposed A358 scheme is not necessarily to replace the A303 through the Blackdown Hills as the main route to Exeter and beyond from locations in the South East, but to increase network resilience in the area by providing a viable alternative route in the event of the A303 through the Blackdown Hills becoming congested or having to close for an incident.</p>	N/A
200	Donyatt Parish Council		<p>Our comments on other potential changes at the SR are as follows:</p> <p>7. There is no mention of the 'environmental impact' caused by dualling an 8.5 mile section of the A358 West in NH's proposals.</p> <p>There are tens of thousands of mature trees and hedgerows, of all types, along this section, mitigating the</p>	<p>The impact of the scheme on biodiversity is reported in Chapter 8 of the ES (Document Reference 6.2), and the assessment has included consideration of the time taken for habitats to mature. The impact of the Scheme on Carbon is assessed in Chapter 14 (Climate) and in the appendices attached to the chapter (Document Reference 6.4).</p>	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			effects of all of the carbon that is produced by vehicles using it. Even if the same number of replacement trees and hedgerows were planted, it will take 30-40 years to reach the same level of maturity as the current ones. Surely, in these times of environmental and climate-change awareness, it would be nothing short of corporate vandalism to cut all of these down just to save drivers a 'theoretical' 4.5 minutes journey time between Ilminster and Taunton.	The landscape proposals, which show where new landscape and ecological planting is provided as part of the scheme are shown in Figure 7.8 Environmental Masterplans (Document Reference 6.3).	
201	Donyatt Parish Council		In summary and in all conscience, we feel the principle of dualling of the A358 is a complete waste of tax-payers money, which should be spent on more worthwhile and justifiable projects. Is this dualling, which isn't in practice going to speed up traffic one iota, really worth all of the consequences to local communities and the environment way into the future?	The A358 will result in time savings in excess of 5 minutes during most times of day. These contribute to an overall economic benefit associated with the scheme that exceeds its cost. All benefits and costs, including non-monetised impacts are considered in assessing the overall value for money of the scheme. Details can be found in the ComMA Report (Document Reference 7.4).	N/A
202	Donyatt Parish Council		The claimed benefits are insignificant and will never materialise as claimed by NH, especially if a holistic approach is not adopted to include major changes to the Southfields Roundabout and access for local people in and out of their communities.	Benefits associated with the A358 scheme have been calculated based on the forecast traffic model for the scheme created by National Highways. The traffic forecasts indicate that the existing traffic congestion at Southfields roundabout would worsen without the proposed improvements. The A358 scheme will enhance capacity which will lead to journey time savings from which both strategic traffic and traffic to and from local communities will benefit.	N/A
203	Donyatt Parish Council		But if NH ignore local communities and decide to go ahead with the dualling then we would need to see all of our suggested amendments and improvements to the Southfields Roundabout implemented as listed above. Not to include significant changes to the SR, in the overall plans to dualise this section of the A358, would be an unmitigated disaster.	The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.	No
204	Hatch Beauchamp Parish Council	At Capland, which option would you prefer to provide a connection between local villages in this area?	The view is split between Options 1 & 2 as we need to understand the definition of a 'link road'. Will it be in keeping with the current lane or widened? However, as an absolute minimum, a bridle path and cycle path between Village Road and Capland Lane must be in place to ensure connectivity and quality of life for residents.	As an outcome of consultation, the scheme now includes Capland link (Option 1), which would be adopted highway for all users. Capland link would connect Village Road (south) and Capland Lane and be 5.5m wide, which is slightly narrower than Village Road (south) but wider than Capland Lane.	Yes
205	Hatch Beauchamp Parish Council	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane?	As per the Consultation Response from the Community of Parishes	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table (from ID 74).	N/A
206	Hatch Beauchamp Parish Council	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	As per the Consultation Response from the Community of Parishes.		N/A
207	Hatch Beauchamp Parish Council	Do you have any other comments about our plans for Section 4: Ashill	As per the Consultation Response from the Community of Parishes.		N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		junction to Southfields roundabout?			
208	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	We want to re-iterate our endorsement of the joint Parish Council submission of which HBPC was a part.		N/A
209	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	We asked for sight of PEIR prior to consultation but this was refused – given that the whole document is in the name of Highways England, not National Highways which was rebranding from August, one assumes this document would have been available well before consultation start. It is an impossible task to critically review a near 1,000 page document plus accompanying data within 6 weeks.	A note was added to the front of the PEI Report to acknowledge the name change from Highways England to National Highways, which coincided with the consultation. The consultation period lasted 41 days, which exceeded the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days. National Highways advertised the dates for the consultation period widely in the local press and through continued engagement with local communities and stakeholders, including at Community Forum events, parish council meetings and in Member briefings. This is detailed in the Consultation Report (Document Reference 5.1). That has provided adequate time for people to prepare for the consultation and to provide their responses, including aligning any governance processes needed to accommodate it if necessary.	N/A
210	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	We asked for longer consultation period but this was denied despite NH taking over 9 weeks to respond to a 6-page document from the combined parish councils. We were not advised of the consultation date until 2 working days before the start. This is contrary to the experience of other consultations which have been given a 2-month notice period in addition to an 8-week consultation period. Furthermore, NH expect snail mail responses to be received on or before 22 November thereby further narrowing the consultation window.	The consultation period lasted 41 days, which exceeded the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days. National Highways advertised the dates for the consultation period widely in the local press and through continued engagement with local communities and stakeholders, including at Community Forum events, parish council meetings and in Member briefings. This is detailed in the Consultation Report (Document Reference 5.1). That has provided adequate time for people to prepare for the consultation and to provide their responses, including aligning any governance processes needed to accommodate it if necessary.  National Highways assessed all of the alternative proposals submitted by the Community of Parishes by putting them through an 'optioneering' process to assess their viability. The results of this optioneering process were shared with the Community of Parishes in September 2021. Some of their proposals were incorporated into the preliminary design proposals that were put forward for statutory consultation. This is detailed in the Consultation Report (Document Reference 5.1).	N/A
211	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	We repeatedly invited (in one instance giving 2 months' notice) NH to meet with Hatch Beauchamp residents but NH claimed they did not have time or resources to meet with all PCs and would not be fair to only meet some. They set the timing of the consultation and knew the number of PCs involved so such meetings should have been factored into their planning and timescales.	National Highways has undertaken a multi-stage approach to consultation on both a statutory and non-statutory basis, and as such has engaged adequately with parish councils (and beyond) throughout the development of the project. As detailed in the Consultation Report (Document Reference 5.1), National Highways has provided adequate time for people to prepare for and respond to consultation exercises.	N/A
212	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	There were only 3 face to face events and the second event was in a room that was far too small with viewing materials cramped. People were forced to queue outside (15 mins or longer) and some people left on arrival as parking had run out and they saw the queues. Furthermore, only one event was held outside of normal working hours and that event was held at one end of the consultation route.	A combination of online and in-person events and tools ensured everyone had access to the consultation and members of the project team. The PEI Report and appendices which were published reflected the available information at the time and National Highways considers it contained an appropriate level of detail for people to provide a response. Any requests for further information or documentation that was outside of the materials provided for consultation were responded to where possible. Responses were provided for all correspondence during the consultation period and a holding response provided if time was required for National Highways to provide a more detailed technical response. Attendees of events were encouraged to submit formal consultation responses to help ensure fully considered responses as reported in the Consultation Report (Document Reference 5.1).  National Highways held three in-person events during the 2021 statutory consultation period to allow people to engage with the scheme and speak with members of the project team. All three events included timings that were both in and out of hours that would be considered standard working hours, this included an event held on a Saturday, an event held during the afternoon and a further event that ran from the afternoon into early evening.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>When deciding where and how to run the in-person events during the consultation, taking any COVID-19 regulations into account, we needed to strike a careful balance between location and proximity to the route as well as safety and accessibility. In-person events were delivered in line with Government guidance relating to COVID-19, including:</p> <ul style="list-style-type: none"> <li>• A maximum capacity was set for each venue to ensure that the venue did not run over capacity and become a health hazard due to an inability to social distance or regulate the amount of airflow in the venue. A queuing system outside the venue was factored into the planning to take account of busier periods, with staff monitoring numbers in and out of the venue, to help ensure people could social distance.</li> <li>• The flow of the room was considered at each venue, with markings placed on the floor to assist people in maintaining a safe distance between one another. All venues were Equality Act compliant, had windows which could be opened to help ventilation, and doors were kept open.</li> <li>• Posters were placed near the entrance to remind attendees to social distance.</li> </ul>	
213	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Many of the maps used were historic showing inaccurate addresses, incorrect boundaries.	Mapping backgrounds used in the plans are obtained from Ordnance Survey and represent the latest data available.	N/A
214	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	We strongly object to all the webinars starting with a slide stating 'The story so far' – the proposed dualling is not fiction and this glib statement is inappropriate and insulting to the hundreds of people whose daily lives and livelihoods will be adversely impacted by this proposed scheme. It typifies the complete disregard NH seems to have for local communities.	National Highways sought to engage with as many of the local community as possible throughout the consultation to ensure their views are taken account of. The approach was developed in consultation with Somerset County Council, Somerset West and Taunton Council and South Somerset District Council (which have now all merged into the unitary authority of Somerset Council).	N/A
215	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	There was no direct engagement with local businesses.	<p>National Highways held regular Business Liaison Group forums in the period running up to the consultation period. These forums were designed to provide information to and engage with both business owners and business representatives from the local area and region, as well as representatives from local authorities.</p> <p>A business sentiment survey was launched in August 2021 and shared with members of the Business Liaison Group to collect feedback on understanding and any questions about the scheme. This survey was also shared with wider local business owners in the fortnightly project newsletter.</p>	N/A
216	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	The staff at the face to face events were unable to answer many basic questions eg the difference between a road and a lane.	Members of staff at the in-person events represented subject matter experts from across the project, all of whom were briefed with information about the project and the consultation to a high standard. Members of the team would have been encouraged where possible to check key information, such as dates and figures, against notes to ensure accuracy.	N/A
217	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	<p>Information is not easily accessible eg elevation information of flyovers necessitates trawling through pages of documents plus photo montages non-existent. The PEIR chapters as a separate download but to obtain the accompanying data such as viewpoints you had to go to virtual room, this was not 'signposted'. On trying to save documents within the virtual room this was not permitted across the board. In the virtual room, unlike the face to face events, there was only the fly through video and not the video where you position yourself in various locations. In many instances, people experienced 'crashes' when using the virtual room.</p> <p>It was not obvious that you should click on 'list view' within the virtual tour to bring up all the numerous documents, they should have been included in the list at the bottom of the consultation page with the other</p>	The PEI Report and appendices which were published reflected the available information at the time and National Highways considers it contained an appropriate level of detail for people to provide a response. Any requests for further information or documentation that was outside of the materials provided for consultation were responded to where possible. National Highways also provided a range of activities throughout the consultation period including in-person events, webinars and webchats, to ensure the consultation was accessible and ensure it was easy for people to view proposals and ask questions of the team. Any requests for further information or documentation that was outside of the materials provided for consultation were responded to where possible. The PEI Report and appendices which were published reflected the available information at the time and National Highways considers it contained an appropriate level of detail for people to provide a response at the pre-application stage of the project. Relevant details are provided as part of ES Chapter 7 Landscape and visual effects (Document Reference 6.2).	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			documents. The haphazard/random nature of this means people thought they had all the documents on the consultation page and didn't look further. Promised information such as screen shots (in place of photo montages) were not emailed on time with a delay of over a week – with such a short consultation window that is unacceptable.		
218	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	The response to questions raised during the consultation period were excessively slow – 28 days in one instance, or not answered at all. When challenged NH said they had received a lot of questions but insisted they had sufficient staff to deal with them! A list of PROW closures was requested during the WCH webinar on 1 November – only answered on 18 November but information still incomplete. This should be easily accessible information.	The PEI Report and appendices which were published reflected the available information at the time and National Highways considers it contained an appropriate level of detail for people to provide a response. Any requests for further information or documentation that was outside of the materials provided for consultation were responded to where possible. Responses were provided for all correspondence during the consultation period and a holding response provided if time was required for National Highways to provide a more detailed technical response.	N/A
219	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Wrong information given out by NH staff eg giving the date of the final face to face event as a day later than already advertised.	Dates and times of events were widely publicised via a variety of channels including the website and the consultation brochure. This is detailed in the Consultation Report (Document Reference 5.1).	N/A
220	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Omission of BCR during consultation is a significant failing of transparency, (NH quote that 'An update of this value for money assessment is currently underway based on the latest scheme proposal'), in fact despite numerous requests for updated scheme costs throughout the consultation period the information was not provided. All we were told was the old information regarding the contract awarded to Taylor Woodrow.	At the time of the statutory and supplementary consultations work was underway to update the economic appraisal to reflect the latest scheme design. The value for money assessment involves quantifying both benefits and costs and these can only be finalised once the scheme design has been frozen following incorporation of design changes based on feedback received from consultation. Both the benefits and the costs have now been updated after full consideration of consultation feedback. Details of the Benefit-to-Cost ratio (BCR) and the scheme costs are given in the ComMA Report (Document Reference 7.4).	N/A
221	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Modelling is incorrect as assumption (confirmed by NH during webinar) is made that Nexus 25 has full occupancy. Given that on the other side of the roundabout Blackbrook Business Park has empty units plus a development plot of 35,000sq ft it is far from certain that Nexus will ever achieve full occupancy.	Transport analysis guidance has been followed in developing the National Highways traffic forecasts. Trip generation assumptions for the future Nexus 25 development are aligned with the Transport Appraisal Report that was submitted as part of the planning application for the development. This ensures that the junction design for the Nexus 25 junction will be able to accommodate the most likely traffic demand that would result from the development being fully built out and occupied.	N/A
222	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Complete lack of attention to detail as demonstrated throughout the document with constant references to Highways England instead of National Highways and cover sheets to PEIR hard copies were labelled PIER! Hardly inspires confidence.	A note was added to the front of the PEI Report to acknowledge the name change from Highways England to National Highways, which coincided with the consultation.	N/A
223	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Hard copies of PEIR given to Hatch Beauchamp Parish Council were incomplete.	At the event on 3 November, a representative from the parish council stated that they did not have a copy of Appendix 7.9 Viewpoint photographs. A hard copy was provided at the event, so to immediately address the issue raised at source. This document and all other PEI Report figures were also available online throughout the consultation period.	N/A
224	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Throughout the PEIR constant reference is made to 'improved connectivity' – instead of raising this every time we wish to make it clear that for the village of Hatch Beauchamp, as well as many other villages along the route, connectivity will be severely reduced and severance increased if this dualling goes ahead. In fact, an independent transport consultant has carried out modelling which demonstrates increased journey length	National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high-quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with high volumes of fast moving traffic on the A358.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			and duration in some cases amounting to doubling of journey time for Hatch Beauchamp residents.	Checks on journey times between local villages and both the M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. This information has been provided in the form of interactive web maps at supplementary consultation. These show that generally there are reductions in overall journey times due to the faster speed of the scheme, although a small number of trips have slightly longer journey times. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.  The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).	
225	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	The parish is affected by two particularly important engineering features. • First, the proposed route for Bickenhall Lane over the new road. As stated in our response to 3(a) above, we propose a bridge for WCH plus farm vehicles only, nonetheless, the visual impact of this bridge, if built, will be significant and should be enhanced with sensitive hedgerow and woodland planting. Small blocks of woodland planting on the Bickenhall side of the A358 would improve a somewhat open landscape which has seen some tree removal in recent years. Of particular interest in this vicinity is the ancient public bridleway T14/8 on the definitive map which runs from Bickenhall Lane to Hatch Green. Whilst the experience of walking/riding this route has been greatly diminished by the close proximity of the A358 carriageway it is still an important and historic amenity for the village. Any harm to its integrity by the new scheme would be hugely damaging to the character of the area. There are tree protection orders in place in this area.	Responding to the consultation feedback, Bickenhall Lane and the overbridge would not be open to through traffic. It would be classified as a restricted byway and shared with nearby landowners for agricultural access. Traffic flow would be low, creating an attractive lane for walkers, cyclists, horse-riders and carriage drivers.  Bridleway T 14/8 would be diverted but still run alongside the scheme and would provide a continuous connection between Bickenhall Lane and Hatch Green.  A combination of environmental mitigation measures has been explored to achieve a range of functions including visual amenity. These measures are presented on the Environmental Masterplan within the ES (Document Reference 6.3, Figure 7.8).	Yes
226	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	The parish is affected by two particularly important engineering features. • Second the proposed route of the new link at Capland. Capland is a hamlet comprising a few dwellings including the historic Capland Spa. It is recognised that this is an important entry point into the village from the south. It is vital, at this point, that any bridge over the new dual carriageway is designed so as not to dominate the immediate environment. It is noted from some of the detailed plans that some species rich grassland is to be put back on adjoining land. However, it is also important that more planting of small blocks of woodland would be necessary, too, to limit the impact of what would appear an alien structure.	The environmental design has been developed further and includes mitigation measures such as woodland planting and shallow earthworks slopes where feasible near the Village Road overbridge.	Yes
227	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	The current plans at the consultation meetings indicate a relatively wide central reservation. It is not clear whether this is an accurate portrayal of NH intentions. If so, however, here is an opportunity to achieve some native shrub planting to soften the impact of dualling if this will not compromise road safety,	Planting proposals are shown on the Environmental Masterplans submitted as part of the ES (Figure 7.8, Document Reference 6.3).	N/A
228	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	The area of countryside between Thornfalcon and Ashill is the Somerset home of the Wild Service Tree. It occurs in very small numbers in the pockets of ancient woodland	Impacts on specific trees or groups of trees within and adjacent to the scheme boundary are presented in ES Appendix 7.3 Tree Survey and Arboricultural Impact Assessment	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		to make about our proposals?	in these parishes, including Hatch Beauchamp, and occasionally in hedgerows. It is extremely rare in other parts of the County and, indeed, in the west country as a whole.	(Document Reference 6.4). Where possible, impacts on high quality trees have been avoided through design where engineering requirements/constraints allow.  It should be noted that the scheme alignment has been designed to avoid ancient woodlands, and no direct loss is anticipated. Where these woodlands are located adjacent to construction areas, appropriate buffers would be established (including a 15m buffer between area of works and woodland edge) and fencing utilised to maintain root protection zones as detailed within the ES Appendix 7.3 Tree Survey and Arboricultural Impact Assessment (Document Reference 6.4).	
229	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	The native Black Poplar is also a rarity which has its only west country stronghold in the Vale of Taunton. A rare native Black Poplar occurs alongside the stream at Hatch Green. Likewise, the uncommon aspen occurs in some of the nearby ancient woodlands in very small numbers.	Impacts on specific trees or groups of trees within and adjacent to the scheme boundary are presented in ES Appendix 7.3 Tree Survey and Arboricultural Impact Assessment (Document Reference 6.4). Where possible, impacts on high quality trees have been avoided through design where engineering requirements/constraints allow.  The Ecological Mitigation Strategy – Habitats, included as part of the ES Appendices (Document Reference 6.4, Appendix 8.34) details measures that would be taken to encourage the long term viability of the Black Poplar population within the local landscape along the scheme, including seeking to propagate this species and incorporate into the planting design for the woodland and hedgerow creation areas.	N/A
230	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	In addition, our parish is on the edge of the distribution limit of two native shrubs, the wayfaring tree and purging buckthorn. There are one or two occurrences in the parish. Further west they disappear. When the details of the planting schemes are drawn up it is suggested that National Highways does its utmost to include a very small proportion of these species in its planting schemes to maintain local distinctiveness.	Planting proposals are shown on the ES Figure 7.8 Environmental Masterplans (Document Reference 6.3).	N/A
231	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	We are not confident how NH have calculated the carbon emissions for the scheme, particularly as they have 'form' in relation to the A417 Missing Link where they claimed a carbon net gain but assumed the habitat would be mature from the moment of planting!	National Highways recognises the concern raised about the scheme within the context of concerns about global warming, and is aware of the changes which the Climate Change Act 2008 (2050 Target Amendment) Order 2019 introduced on 27 June 2019.  National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the PEI Report considered impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). In all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate. This assessment has also been updated within ES Chapter 14 Climate (Document Reference 6.2) that will be submitted as part of the A358 DCO application, and outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. ES Chapter 14 Climate (Document Reference 6.2) describes an assessment of any likely significant climate factors in accordance with the requirements in the EIA Regulations.	N/A
232	Hatch Beauchamp Parish Council	Do you have any other comments you would like to make about our proposals?	Given that one of the main reasons the Tulip building in London has very recently been rejected by the Planning Inspector was that its construction was not carbon neutral we fail to understand how building this road, which by your own admission will not be carbon neutral, is appropriate.	National Highways recognises the concern raised about the scheme within the context of concerns about global warming, and is aware of the changes which the Climate Change Act 2008 (2050 Target Amendment) Order 2019 introduced on 27 June 2019.  National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the PEI Report considered impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). In all cases the emissions calculated demonstrated no impact on the ability of	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				the UK Government to meet these carbon budgets, and no significant effect on climate. This assessment has also been updated within ES Chapter 14 Climate (Document Reference 6.2) that will be submitted as part of the A358 DCO application, and outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. ES Chapter 14 Climate (Document Reference 6.2) describes an assessment of any likely significant climate factors in accordance with the requirements in the EIA Regulations.	
233	Hatch Beauchamp Parish Council	Further comments about the plans for Section 1: M5 junction 25 to Mattock's Tree Green junction.	As per the Consultation Response from the Community of Parishes.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
234	Hatch Beauchamp Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	As per the Consultation Response from the Community of Parishes.		N/A
235	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? To summarise, they would allow the existing road to be converted to a local route, connecting to the new Village Road bridge and providing connectivity between Ashill and Hatch Beauchamp, keeping access to properties along this route.	As per the Consultation Response from the Community of Parishes.		N/A
236	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	As per the Consultation Response from the Community of Parishes. With regard to the proposals as above from NH we cannot endorse a bridge for vehicles alongside WCH. Bickenhall Lane is a LANE and as such unsuitable for volume of traffic which this proposal would result in. Neroche Parish Council have already confirmed their villagers would use the bridge as their access to the A358 via Hatch Beauchamp. Again, your proposals would funnel excessive traffic through our rural village. There would be serious conflict with WCH and we consider this to be an accident/fatality waiting to happen both along the lane route as well as through the village. We propose a bridge for WCH plus farm vehicles only, using a security device to allow farm vehicles access to the bridge and this would replicate the existing usage of the lane.	Responding to the consultation feedback, Bickenhall Lane and the overbridge would not be open to through traffic. It would be classified as a restricted byway and shared with nearby landowners for agricultural access. Traffic flow would be low, creating an attractive lane for walkers, cyclists, horse-riders and carriage drivers.	Yes

237	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses?	As per the Consultation Response from the Community of Parishes	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised – refer to the relevant section of this table (from ID 74).	N/A
238	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm Units.	As per the Consultation Response from the Community of Parishes		N/A
239	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358?	As per the Consultation Response from the Community of Parishes.		N/A
240	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	As per the Consultation Response from the Community of Parishes.		N/A
241	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road?	As per the Consultation Response from the Community of Parishes		N/A
242	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout?	As per the Consultation Response from the Community of Parishes.		N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
243	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction?	As per the Consultation Response from the Community of Parishes.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised, see the relevant section of this table (from ID 74).	N/A
244	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358?	As per the Consultation Response from the Community of Parishes.		N/A
245	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout?	As per the Consultation Response from the Community of Parishes.		N/A
246	Hatch Beauchamp Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout?	As per the Consultation Response from the Community of Parishes.		N/A
247	Horton Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	As per Response from the Community of Parishes. Horton Parish Council responses are tailored to the section between Ashill and Southfields roundabout.		N/A
248	Horton Parish Council	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	As per Response from the Community of Parishes. Horton Parish Council responses are tailored to the section between Ashill and Southfields roundabout.		N/A
249	Horton Parish Council	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	As per Response from the Community of Parishes. Horton Parish Council responses are tailored to the section between Ashill and Southfields roundabout.		N/A
250	Horton Parish Council	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	The closure of the Cad Road junction will channel traffic along Rapps Road, including HGVs to the two Ilton Business Parks and military convoys to and from Merryfield Airfield. The scheme proposal is inadequate to safely cope with this increased traffic load on a narrow country road. The provision of a single on-slip road from Cad Road on to the southbound A358 carriageway would balance out the traffic flow better. A vehicular bridge crossing between Broadway Street and Cad Road would	National Highways has undertaken an assessment of mitigation measures that are likely to be required on local roads as a result of the traffic impacts of the scheme. The standard of Rapps Road is such that it provides sufficient capacity to accommodate the forecast increase in traffic volumes. HGVs make up only around 2% of overall traffic volumes along Rapps Road and the speed limit through Rapps is 40mph. Personal injury accident records along Rapps Road show that there have been no accidents resulting in casualties on the sections that would remain unchanged as part of the scheme for at least 20 years. The location where there have been personal injury accidents along Rapps Road is at the	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			maintain connectivity between Horton, Broadway and Ilton, villages which are closely linked.	junction with the A358, which would be closed and replaced with a much safer grade-separated junction as part of the scheme.	
251	Horton Parish Council	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	The loss of access points to the A358 and connectivity between communities and across parishes will result in increased journey times for local traffic.	National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high-quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with the high volume of fast-moving traffic on the A358.  Checks on journey times between local villages and both the M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. These show that generally there are reductions in overall journey times due to the faster speed of the scheme, although there are a small number of trips that would have slightly longer journey times. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.  The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).	N/A
252	Horton Parish Council	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	A bridge crossing the A358 for walkers, cyclists and horse riders is supported, however the proposed bridge is in completely the wrong location, too far from the end of Broadway Street and Cad Road to provide a usable link for people between Broadway, Horton and Ilton. A bridge located at the end of Broadway Street/Cad Road would provide a sustainable option for local people to access employment sites via walking / cycling rather than in vehicles via the Ashill junction.	As an outcome of statutory consultation, Jordans overbridge replaces Ding underbridge and would provide a more direct link between Horton Cross, Broadway Street and Cad Road. The track would be shared with agricultural users, classified as a restricted byway and suitable for all non-motorised users, including carriage drivers.	Yes
253	Horton Parish Council	Please let us know if you have any comments on our proposals for construction, including the proposed phasing.	Henlade bypass (M5 to Mattocks Tree Green) built as phase 1, with Mattocks Tree Green to Southfields as a separate, later, phase 2.	National Highways acknowledges the suggestion. Phasing of the works depends on a number of factors and will be optimised for delivery of the scheme as a whole. National Highways has produced an Environmental Management Plan submitted as part of the ES Appendices (Document Reference 6.4 Appendix 2.1) which outlines how the impact of the construction on the environment, the road network and local communities will be managed.	N/A
254	Horton Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	The PEI report describes the effects as permanent significant adverse for landscape character areas and visual receptors, best and most versatile agricultural land, designated sites and protected species, bats (due to loss and fragmentation of habitats) and Bickenhall Wood.	The assessments for landscape, agriculture and biodiversity have been revised as further information from surveys and design development have been received. The revised assessments are in Chapter 7 Landscape and visual effects, Chapter 8 Biodiversity, Chapter 9 Geology and soils and Chapter 12 Population and human health of the ES (Document Reference 6.2).	N/A
255	Horton Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	The significant levels of effect on the environment, including habitats, wildlife corridors and protected species, landscape character and visual amenity do not outweigh the benefits.	Whilst the ES (Document Reference 6.2) assesses the different environmental impacts alongside setting out appropriate mitigation measures, the Case for the Scheme (Document Reference 7.1) presents the planning balance taking into account all of the costs and benefits.	N/A
256	Horton Parish Council	Please let us know if you have any comments on the information presented in the Preliminary	The report also states that more properties will have permanent significant adverse effects from noise than those benefiting from noise reduction.	The scheme includes a low noise surface to minimise noise generation in all locations. Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. Where individual residential properties are still predicted to be exposed to noise increases above the thresholds set out in the Noise Insulation Regulations 1975, they may qualify for a package	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Environmental Information (PEI) Report.		<p>of noise insulation measures (glazing and ventilation) to minimise noise ingress to their property. This is reported in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2).</p> <p>Taking account of the additional mitigation measures, since the PEI Report was produced, as set out in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2), there are 110 permanent significant adverse effects and 360 permanent significant beneficial effects identified.</p>	
257	Horton Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	Since the scheme inception in 2014, the environmental issue of climate change has risen to prominence. The ideology of this large infrastructure road corridor is out of step with current thinking, phasing out of petrol and diesel cars and the need to cut emissions by 78% by 2035 to achieve climate change goals.	<p>National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.</p> <p>National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the PEI Report considered impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). This assessment has also been updated within ES Chapter 14 (Document Reference 6.2), which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 and concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.</p> <p>National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.</p> <p>National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the PEI Report considered impacts over a 60-year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). This assessment has also been updated within ES Chapter 14 (Document Reference 6.2), which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 and concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.</p> <p>An outline Carbon Management Plan is provided as Annex K of the Environmental Management Plan (Environmental Statement Appendix 2.1, Document Reference 6.4).</p>	N/A

		let us know the reasons for your response			
264	Horton Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	As per Response from the Community of Parishes. Horton Parish Council responses are tailored to the section between Ashill and Southfields roundabout.		N/A
265	Horton Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	The existing connection to the A358 via Broadway Street is important to Horton residents, providing an access point for work and leisure to both north and south bound carriageways on the A358 and access via Cad Road to Ilton. It also enables those from the surrounding area, notably from Ilminster and east of Ilminster, access to Broadway for its school and doctor's surgery and village hall. It is important that traffic flows in and out of the village via Broadway Street are neither discouraged nor diverted onto local roads in Broadway, Horton and Ashill.	As part of the scheme there will be a new local road link running parallel to the A358 to connect Broadway Street with the Ashill junction. As part of the scheme additional passing places will be introduced along the existing section of Broadway Street to improve it as a key access route to Broadway and Horton. National Highways traffic forecasts indicate that the scheme will have no notable impact on traffic volumes travelling along Broadway Street or Suggs Lane.	N/A
266	Horton Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	The proposed link connecting Broadway Street and Thickthorn Lane to the proposed Ashill junction facilitates access to and from the dualled A358 at without massive inconvenience if travelling to or from the north on the A358. The proposal will however result in rat runs developing through Broadway to access this link. Both Broadway Street and Suggs Lane are narrow, single carriageway rural lanes.	The proposed link connecting Broadway Street and Thickthorn Lane to the proposed Ashill junction does not fundamentally change the connectivity to the A358. Drivers are currently able to access the A358 at the eastern end of Broadway Street. This additional link will ensure that drivers will continue to be able to access the A358 via Broadway Street. National Highways traffic forecasts indicate that the scheme will have no notable impact on traffic volumes travelling along Broadway Street or Suggs Lane.	N/A
267	Horton Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	The proposal fails to provide access to Broadway off the A358 for traffic travelling from the south (from Southfields). This traffic would have to use the Ashill junction, involving an additional 3.2 miles for a round trip from Southfields roundabout, which is twice the distance compared to the Suggs Lane route. It is inevitable that those wishing to reach Broadway for medical, educational, social or employment purposes will use the shorter route via Suggs Lane, which is totally unsuitable for increased traffic as a single carriageway rural lane with a ford.	National Highways traffic forecasts indicate that the scheme will have no notable impact on traffic volumes travelling along Broadway Street or Suggs Lane. Improvements at Southfields and improved journey times on the A358 would reduce the amount of traffic using alternative routes in this area, counteracting any local re-routing of trips between Broadway and locations to the south.	N/A
268	Horton Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway	An off-slip road for northbound A358 traffic at Broadway Street would solve this issue. This has so far been refused by National Highways, justified by its adoption of the GD300, Expressway standard for the whole route.	A connection between Broadway Street and the A358 is provided via the proposed Broadway Street link and Ashill junction and this is considered to be an appropriate intervention to ensure connectivity and access to the A358 and other destinations. An additional off-slip directly onto Broadway Street would be in close proximity to the off-slip	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response		already proposed at Ashill junction and would be very lightly trafficked, benefiting very few users and would also introduce an additional conflict point onto the A358.  Traffic modelling indicates that additional junctions, in addition to those proposed at Mattock's Tree Green and Ashill, would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	
269	Horton Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	As per Response from the Community of Parishes. Horton Parish Council responses are tailored to the section between Ashill and Southfields roundabout.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised - see the relevant section of this table.	N/A
270	Horton Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	The existing connection to the A358 via Broadway Street is important to Horton residents, providing an access point for work and leisure to both north and south bound carriageways on the A358 and access via Cad Road to Ilton. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. An additional junction would also have further environmental impacts.	
274	Horton Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	As per Response from the Community of Parishes. Horton Parish Council responses are tailored to the section between Ashill and Southfields roundabout.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
275	Horton Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	As per Response from the Community of Parishes. Horton Parish Council responses are tailored to the section between Ashill and Southfields roundabout.		N/A
276	Horton Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	While an objective to enhance facilities for WCH is stated, the reality is that this will not be achieved and the accessibility of PRow and suitable routes will be much worse.	The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. Proposals for walking, cycling and horse-riding as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the public rights of way management plan (ES Appendix 2.1 Annex F, Document Reference 6.4). Public Rights of Way (PRow) would be retained as much as possible, and the scheme includes new off-road routes and new crossings. Some diversions and stopping up would be inevitable but users would no longer be trying to cross the A358 at grade, making the public rights of way network safer and more inclusive.	N/A
277	Horton Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Numerous footpaths that cross the current A358 will be blocked off (seven between Southfields and Stewley / Wood Road). This will make many paths dead ends and therefore unusable, with inadequate diversions and new, alternative routes put forward to maintain the connectivity of the rights of way. In addition, four road crossing points will be lost in the same section, further adversely impacting on connectivity across the road corridor. This applies to cycle routes too. The connectivity between villages will be heavily reduced.	The scheme seeks to improve connectivity and proposals for walking, cycling and horse-riding are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the public rights of way management plan (ES Appendix 2.1 Annex F, Document Reference 6.4). Eight footpaths either cross or intersect the scheme between Stewley/Wood Road and Southfields: <ul style="list-style-type: none"> <li>• Footpath CH 1/1 would be diverted through Sunnyside underpass.</li> <li>• CH 1/2 and CH 1/3 would be partially stopped-up on the southern side of the scheme and walkers would use the road link and Sunnyside underpass instead.</li> <li>• CH 1/5 would be partially stopped-up and walkers would use Ashill junction instead.</li> <li>• CH 1/21 would be fully stopped-up to avoid a dead end footpath.</li> <li>• CH 1/6 would be partially stopped-up and walkers would use Broadway Street link and Ashill junction or Jordans overbridge instead.</li> <li>• CH 2/15 and 2/16 would be partially stopped-up and walkers would use a new restricted byway and Jordans overbridge instead.</li> </ul> Three local load crossings would be stopped-up: Park Barn Lane, Thickthorn Lane and Broadway Street/Cad Road. Park Barn Lane and Thickthorn Lane are not popular cycle routes but cyclists could use Ashill junction instead. Cyclists on Broadway Street/Cad Road would be able to use the new restricted byway and Jordans overbridge. This would be	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				shared with the agricultural users, very lightly trafficked and safer and more inclusive than the existing at grade crossing.	
278	Horton Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	The lack of bridge between Broadway Street/Cad Road will severely reduce connectivity for WCH users, with the proposed Ding Bridge in the wrong location to be effective, especially those needing a more direct route between the villages to employment sites. The use of local roads should not be seen as compensation for loss of rights of way, as these are not always particular suitable or safe, especially given the increase in traffic on local roads that will occur.	Responding to the consultation feedback, a new overbridge at Jordans Farm would replace the previously proposed route under the A358 through Ding bridge and strengthen the off-road network in this location. It would connect the Old A358 at Horton Cross, Broadway Street and Cad Road and be classified as a restricted byway. The overbridge would be shared use with the landowner and very lightly trafficked.	Yes
279	Horton Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	As per Response from the Community of Parishes. Horton Parish Council noted their responses are tailored to the section between Ashill and Southfields roundabout.	National Highways acknowledges support for comments made by the Community of Parishes. For detailed responses to matters raised, see the relevant section of this table.	N/A
280	Ilminster Town Council	Business Case	It is the belief of ITC that the apparent flawed design of the Southfields Roundabout, allied to the failure to provide adequate access to the redesigned A358 will potentially increase the level of vehicles that are required to travel into Ilminster in order to get to Southfields Roundabout. The impact on Ilminster has not been adequately addressed in the proposals. Neither has the resultant traffic impact on Southfields Roundabout. At a time when Government are pushing environmentally sustainable transport schemes there appears to have no consideration for how cyclists are to safely navigate their way across the A358 and A303 or around Southfield roundabout.	National Highways has undertaken traffic modelling of the A358 and surrounding area including operational modelling of the key junctions along the scheme. The modelling of Southfields roundabout has been used to design mitigation measures to upgrade the roundabout such that in the 2046 design year it operates within its practical capacity during typical peak hour conditions. Checks have been undertaken on the summer period to see what impact the changes in flows during summer periods have on the operation of the roundabout. The improvements are forecast to appropriately deal with the forecast increases in traffic, reducing the likelihood that drivers seek alternative routes through the network. As such, it is unlikely that traffic would have to travel into Ilminster to access Southfields roundabout.  The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).  The speed restriction along the A358 (west) between Horton Cross and Southfields would be reduced to better manage mixed traffic flows and a new road crossing provided at the services access as part of the traffic signal control. New footway/cycleway construction would tie into the existing at the new crossing with filters for cyclists to exit or enter the carriageway. The existing shared use path at Southfields roundabout between the A358 (west) and A303 (south) arms would be widened to better accommodate pedestrians and cyclists. These measures contribute to a safer environment for cyclists, allowing them to avoid the circulatory carriageway at Southfields roundabout. A crossing of the A303 (south) is outside the scope of the scheme.  National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
281	Ilminster Town Council	Design Failings	The A358 Technical Traffic Note provides some limited data on the performance of the scheme and within the local rural network. Although journey times are modelled to the second no similar precision is provided regarding the locations at which modelled journeys commence and finish. However, with the data available it is possible to assess that the average speed along the scheme is a modest 50mph in 2028 and 47mph in 2043. This is some way below the design speed of an Expressway and is caused by delays at and across the Taunton and Southfield roundabouts of 3 and 4 minutes in 2028 and 2043 respectively. As National Highways traffic models are constructed to reflect typical conditions on an average weekday the performance during the holiday season will be considerably worse. It is also ITC's belief that there has been an under estimation of the issues that will be caused through the routing of traffic through Ilminster as a result of inadequate junction design and provision.	National Highways responded to a request for information at statutory consultation and provided the exact start and end location of the journey times quoted in the A358 Technical Traffic Note. All junctions along the A358 corridor would operate within their practical capacity. National Highways has assessed junction performance both based on typical conditions during peak hours outside of the summer holiday season and also under summer peak conditions. The improvements are forecast to appropriately deal with the forecast increases in traffic, reducing the likelihood that drivers seek alternative routes through the network. As such, it is unlikely that traffic would have to travel through Ilminster to access Southfields roundabout. Details of junction operation, including delays during peak hours, are reported in the ComMA Report (Document Reference 7.4).	N/A
282	Ilminster Town Council	Design Failings	Highways England shows no empathy regarding the effect of the proposed design on the social fabric of the communities through which the road passes. Access to shops, fuel, surgeries, churches, village halls, recreation, leisure and social venues, is vital to the wellbeing of the local parish communities. Except for the clear benefits of a Henlade bypass, conclusions reporting the scheme benefits on local communities are weak and subjective (PEIR, 12.9.20, 12.9.83, Table 16-1), using phrases 'likely slight beneficial', 'considered to lead to slight beneficial effect', 'improving the perception of connectivity'. There is no detailed assessment of the problems the scheme will bring to local society as required by GG 104. GG 104 defines Other Parties as people living or working adjacent to the road or using the local rural network affected by the scheme. GG 104 governance requirements arise from statutory legislation (Section 3(1), Health and Safety at Work etc. Act 1974) that mandates National Highways to reduce the risk to Other Parties to 'as low as is reasonably practical' (ALARP), a higher level of safety than required for actual road users. In spite of this statutory requirement National Highways has not mitigated the risks to Other Parties to an ALARP level. Neither has National Highways embedded design measures to avoid or reduce the adverse impact of noise and vibration as required by the NPSNN (NPSNN 5.195 and PEIR, Table 11.25). Overall, the scheme imposes adverse noise effects on 813 residential properties with only 324 benefiting. Disturbingly, National Highways can only anticipate that the scheme will lead to a slight beneficial effect on local human health. Illustrating the total lack of understanding of the locality, National Highways highlights the positive health outcome in North Curry and Stoke St Gregory, two villages well connected to the A378 some 3-5 miles distant, while ignoring the adverse impact on Hatch Beauchamp, Ashill, Broadway, Ilton and Horton, which adjoin the scheme. ITC would also consider the lack of consideration of the impact of Ilminster residents at best	The project design has been modified following the consultation process to incorporate some of the comments made by parish councils and members of the public in the consultation exercise in 2021. The revised design has been communicated to Parish Councils and the statutory bodies and formed the basis for the 2022 supplementary consultation exercise. The DCO application and supporting documents, such as the ES (Document Reference 6.2) has been based on the design resulting from consultation.  National Highways has also been engaging closely with Somerset Council as the local highway authority for advice and comment on the local road network. During this stage of scheme development, National Highways and Somerset Council have jointly developed a Local Roads Strategy (LRS) and Local Roads Assessment (LRA) for the scheme. The LRS assesses suitable design methodologies and standards for those parts of the local roads network affected by the scheme while the LRA identifies risk and proposed mitigation, adopting GG104 principles. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			disappointing and at worse a failure in proper governance.		
283	Ilminster Town Council	Governance	<p>A recent response to a consultation query<sup>4</sup> demonstrates the ambiguities within National Highways' compliance with design principles and governance, a requirement placed on National Highways' Licence (5.28) and by GG 103, Sustainable Development and Design, (5.1 and Note).</p> <p>E/5.2 and Table E/5.2 are explicit that a junction at a major road intersection, i.e. the A358 Expressway and the M5, is to be a FULL grade separated junction, requiring free flowing merges and diverges. As this is not provided in the scheme National Highways defends the A358 Expressway standard by insisting Junction 25 is a grade separated terminal junction, ignoring the at-grade conflicts with other connections at the roundabout. Its own traffic analysis concludes that the roundabout and its traffic management introduce delays that totally undermine the high-performance promise of an Expressway standard. National Highways admits that both Nexus 25 and Southfields do not comply with Expressway standards but chooses to ignore E/5.1 and E/5.2 governance stating the standards that it is working to - Appendix E/F of GD 300 - are only advisory, quoting Clause E/F1.1.</p> <p>This is not the case as the Clause also directs the level of applicability to be followed in any design, and Table E/F.31 states that Table E/5.2 is applicable to Level 1 and 2 Expressways. The footnote to Table E/F.31 reinforces this point stating 'DG/E/5.2/1 [Level 1 &amp; 2] The requirements in Table E/5.2 apply. If requirements in Table E/5.2 are not applied in accordance with this it prevents future compatibility with level 3 and 4 without further major interventions'. It is symptomatic of National Highways to cherry-pick what it does and does not observe within the DMRB manuals. With regard to the Community of Parishes proposals (as supported in this document by ITC) they have been repeatedly told that several are not permitted due to non-compliance with Appendix E/F, which National Highways is now stating is only advisory. Within its response National Highways also describes the Expressway scheme as being future-proofed and compliant with anticipated future changes. With climate change measures already effecting national infrastructure projects across the UK, this claim is very questionable. (Table provided)</p>	<p>M5 junction 25 is a full-grade separated junction (and the terminal junction of the proposed A358 scheme) as it has free flowing merges and diverges between the M5 and slip roads. Figure A.6 of CD 122 Appendix A (Examples of full grade separated junction layouts) provides an example of a "Roundabout - 2-bridge configuration" which represents the M5 junction 25 layout.</p> <p>The proposed arrangement of the upgraded M5 junction 25 would provide appropriate capacity for the predicted traffic flows in the design year 15 years after opening. This is in accordance with design standards to provide a balance between traffic capacity and economic benefit. With M5 junction 25 forecast to operate within its practical capacity any delays and queues that are reported at the junction in the ComMA Report (Document Reference 7.4) are associated with the normal build up and dissipation of queues as part signal cycle, with queues for a particular movement building up when traffic lights are red and being released when they are green.</p> <p>Traffic modelling indicates that journey time savings resulting from the scheme will be in the order of 5 to 8 minutes, which demonstrates that M5 junction 25 and Southfields roundabout in the configuration proposed as part of the A358 scheme design do not undermine the performance of the scheme as a high-quality dual carriageway or the scheme objectives.</p> <p>At Nexus 25, the signalised junction will serve not only the new A358, but also the connections into the proposed Nexus 25 employment site and to the Taunton Gateway Park and Ride and local connections into Henlade and Creech St Michael. Given this, and the proximity of Nexus 25 to Junction 25, a grade separated junction is not considered to be feasible at this location.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.</p> <p>National Highways have continued to gather environmental information that allows us to identify the potential impacts of the proposed scheme and develop measures to avoid or reduce them. This process is known as an Environmental Impact Assessment (EIA). The ES reflects the evolution of the design of the scheme and is submitted as part of our DCO application (Document Reference 6.2)</p>	N/A
284	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane?	The route should be built as a D2AP road, with governing DMRB documents CD 109, CD 127, CD 122 and CD 116.	The A358 scheme is a dual carriageway and will have all-purpose trunk designation. National Highways are adopting the latest design standards for the A358 scheme as part of the DMRB and this includes CD 109, CD 127, CD 122 and CD 116.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
285	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	The route should be built as a D2AP road, with governing DMRB documents CD 109, CD 127, CD 122 and CD 116.	The A358 scheme is a dual carriageway and will have all-purpose trunk designation. National Highways are adopting the latest design standards for the A358 scheme as part of the DMRB and this includes CD 109, CD 127, CD 122 and CD 116.	N/A
286	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	National Highway's conclusions on Human Health, Noise and Vibration highlights the mediocrity of the scheme as currently designed. North Curry and Stoke St Gregory, villages miles away from the direct impact of the scheme, are the sole identifiable beneficiaries. It is also damning that the Expressway will subject more residential properties to noise and vibration (813) than those that benefit from less (324). For the rest, National Highways can only point to a 'likely slight beneficial effect' on health across the local area, whilst ignoring the adverse impact on communities lying adjacent to the Expressway.	The scheme will include a low noise surface to minimise noise generation in all locations. Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. Where individual residential properties are still predicted to be exposed to noise increases above the thresholds set out in the Noise Insulation Regulations 1975, they may qualify for a package of noise insulation measures (glazing and ventilation) to minimise noise ingress to their property. This is reported in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2).  Taking account of the additional mitigation measures, since the PEI Report was produced, as set out in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2), there are 110 permanent significant adverse effects and 360 permanent significant beneficial effects identified.	N/A
287	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	Both the Staple Fitzpaine Road and Bickenhall Lane are single lane roads, with insufficient passing points. Neither road is suitable or wide enough to withstand the increased traffic of farm vehicles and other business delivery vans, lorries, and cars. This will have a dramatic impact on all those who live on, or near, the lane or use the lane for their leisure purposes.	National Highways has also proposed local road improvements as a result of changes in traffic flows which are considered appropriate to the nature of the local road network and has developed these in conjunction with Somerset Council as the local highway authority. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).  National Highways traffic forecasts indicate that the scheme will have no notable impact on traffic volumes travelling along Staple Fitzpaine Road, therefore no additional improvement works to the existing layout are considered to be required.	N/A
288	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	If both Staple Fitzpaine Road and Bickenhall Lane are to be the main access points, there are improvements required to the road which are vital for both road safety and quality of life for those who live in the immediate area. These improvements are as follows: - Upgrading the route to include more passing points to be created in both Staple Fitzpaine Road and Bickenhall Lane. These single-track roads do not currently have enough passing points, meaning all vehicles, large and small, are frequently required to reverse a significant distance to enable the flow of traffic. This is clearly a safety issue which needs to be addressed.	Bickenhall Lane would no longer be open to through traffic after the scheme is implemented.	Yes
289	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	These improvements are as follows: The Staple Fitzpaine Road will need re-surfacing as much of the carriageway has been worn away. There are sections of the route that about a deep stream bed, which even with the current limited traffic flows, continually has issues with collapsing into the stream. This will be greatly exacerbated by the increased traffic levels.	National Highways traffic forecasts indicate that the scheme will have no notable impact on traffic volumes travelling along Staple Fitzpaine Road.  The condition of the road and requirement for re-surfacing would be a matter for Somerset Council as the local highways authority and their forward plans for maintenance and renewal works.	No
290	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and	Do you have any other comments about our plans for Section 3:	These improvements are as follows: The bridge on the Staple Fitzpaine Road is not robust enough to accommodate any increase in traffic flow, and therefore, needs to be improved. The banks fall away to the side of the bridge,		No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	Orchard Portman with Thurlbear	Griffin Lane to Ashill junction?	with over a 3-metre drop, with very weak barriers currently in place. There will be a greater risk of vehicles going off the road, into the river, due to increased traffic and congestion.		
291	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	These improvements are as follows: Due to the increased traffic, which will be experienced in both the villages of Bickenhall and Staple Fitzpaine, we would like traffic calming measures in both villages, in the form of Village Gateways and road markings to encourage drivers to slow down.	National Highways traffic forecasts indicate that the scheme will have no notable impact on traffic volumes travelling through Bickenhall or along Staple Fitzpaine Road.  National Highways has also proposed local road improvements as a result of changes in traffic flows which are considered appropriate to the nature of the local road network and has developed these in conjunction with Somerset Council as the local highway authority. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	No
292	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	These improvements are as follows: Both Staple Fitzpaine Road and Bickenhall Lane, like many roads in Bickenhall, often flood in the winter months, making it impassable. We wish to know how the road drainage will be improved.	The proposed drainage proposals for the scheme are based on capturing and containing surface water generated by hardstanding areas and attenuating them down to existing rates of runoff (greenfield runoff rate). Therefore, surface water generated by any additional hardstanding is controlled to predevelopment runoff rates. Furthermore, existing surface water flow routes have been taken into account to ensure surface water is not inadvertently directed towards sensitive receptors.  For existing local roads, drainage is the responsibility of Somerset Council as the local highways authority.	N/A
293	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	These improvements are as follows: To aid the noise reduction from the A358, and the general environmental impact to the community, we would like the planting of trees and hedges along the road, with high banks where the topography allows, to act as noise barriers.	The use of trees to act as acoustic screening to minimise noise is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of vegetation required tree planting is not generally adopted as a reliable noise mitigation measure.  The scheme will include low noise surfacing. In addition, as informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. This is reported in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2).	N/A
294	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	These Improvements are as follows: To mitigate the additional noise, we insist on a low noise road surface for the A358	The scheme will include a low noise surface to minimise noise generation in all locations.	N/A
295	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	These improvements are as follows: Currently there is no lighting on either the Staple Fitzpaine Road, Bickenhall Lane or our section of the A358, we would like this to remain the same, to avoid any further light pollution.	Lighting would only be proposed at M5 junction 25, the Nexus 25 signalised junction and Southfields roundabout. Modifications to existing lighting on local roads will also be required where the scheme proposals affect these, for example at Stoke Road.	N/A
296	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	The route should be built as a D2AP road, with governing DMRB documents CD 109, CD 127, CD 122 and CD 116	The A358 scheme is a dual carriageway and will have all-purpose trunk designation. National Highways are adopting the latest design standards for the A358 scheme as part of the DMRB and this includes CD 109, CD 127, CD 122 and CD 116.	N/A
297	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane	The current proposed layout for the bridge is over engineered and should utilise the existing Bickenhall Lane infrastructure as much as possible to reduce the destruction of agricultural land. Neroche Parish were	Responding to the consultation feedback, Bickenhall Lane and the overbridge would not be open to through traffic. It would be classified as a restricted byway and shared with nearby	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
	Orchard Portman with Thurlbear	to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	dismayed to not be shown the options for the bridge layout which Hatch Beauchamp have seen. Of the four options, option 4 is the preferable route as it reduces the land tarmacked over and will act as a speed reduction layout for Bickenhall Lane.	landowners for agricultural access. Traffic flow would be low, creating an attractive lane for walkers, cyclists, horse-riders and carriage drivers.  The proposed layout at Bickenhall Lane is Option 4. It is considered to provide a lower impact on the adjacent ancient woodland and reduced severance of habitat connectivity and so provides the best option from a biodiversity perspective. It is considered to be beneficial to walking, cycling and horse-riding users as there will be less traffic using Bickenhall lane.	
298	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	Pursuance of this 'Expressway Corridor' vision has distorted the thinking behind the current A358 improvement. National Highways attempts to obscure this failure by not including the congestion at the roundabouts in the issues needed to be resolved nor within the road typology (Paragraph 1.2.9). Rather National Highways transfers blame for congestion onto the link between the roundabouts. Contrary to what National Highways implies the current A358 and surrounding area has an accident rate lower than the national averages (Paragraph 12.6.69), and east of Thornfalcon there is no evidence of traffic joining the A358 being the cause of congestion. The rationale for building an Expressway to improve safety and reduce journey time across the scheme lacks evidence.	A comparison of the accident rate of the existing road against a national average accident rate is documented in the ComMA Report (Document Reference 7.4). This indicates that the existing road is less safe than the national average expected of a strategic A road of the existing standard. Furthermore, dual carriageways are significantly safer than single carriageway roads as they reduce the number of incidents related to dangerous overtaking and junction turning movements. The upgrade to dual carriageway will therefore bring a step change in safety along the A358 corridor.  The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.  Somerset County Council completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes. As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity.  The form of the Nexus 25 junction has been amended to be a signalised crossroads. This will allow the junction operation to be linked to nearby M5 junction 25 and will also allow a pedestrian crossing facility to be incorporated into the junction without negatively impacting the capacity available to vehicles at the junction.	N/A
299	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	Although the PEIR never mentions Expressways it is designed in part to GD 300 standards, the title of which is General Principles & Scheme Governance, Requirements for new and upgraded trunk roads (Expressways). GD 300 is within a library named Design Manual for Road and Bridges (DMRB) and as the title suggests provides governance over National Highways design. GD 300 stipulates that the whole standard must be applied within an Expressway scheme. A key component of an Expressway is that all junctions are required to be at full-grade separation (Paragraph E/5.2), but the scheme fails this requirement as the link terminates at at-grade roundabouts, one even has traffic lights. In this situation GD 300 governance directs National Highways to categorise the scheme as an All-Purpose Trunk Road (Paragraph E/5.1) built according to CD 109 standards (Highway link design) with all other design requirements re-evaluated (Paragraph E/1.4). This governance related directive does not permit a departure from standards (Table E/F.31) and is in place to ensure that schemes are efficient and provide value for money, a mandate placed upon National Highways by its Licence (Paragraph 4.2d). If governance had been	M5 junction 25 is a full-grade separated junction (and the terminal junction of the proposed A358 scheme) as it has free flowing merges and diverges between the M5 and slip roads. Figure A.6 of CD 122 Appendix A (Examples of full grade separated junction layouts) provides an example of a "Roundabout - 2-bridge configuration" which represents the M5 junction 25 layout.  The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.  The DMRB covers a suite of different standards that are used for the design of motorway and all-purpose trunk road schemes. As with any major highways scheme, there are both	N/A

All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.	
301	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	An evaluation of the Preferred Route compatibility with GD 300 requirements should have been undertaken at the commencement of Stage 3, at which point DMRB governance should have directed a decision to categorise the route as a D2AP road. Governing DMRB documents would then be CD 109, CD 127, CD 122 and CD 116, which superseded the Volume 6 equivalents employed during Preferred Route selection.	The A358 scheme is a dual carriageway and will have all-purpose trunk designation.  National Highways are adopting the latest design standards for the A358 scheme as part of the DMRB and this includes CD 109, CD 127, CD 122 and CD 116.	N/A
302	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	It is extraordinary that National Highways is proposing to build an Expressway, a sub categorisation of a Motorway, yet does not use the name itself in any documentation presented at the Statutory Consultation. National Highways only refers to GD 300 standards once, in Table 3.1 to record that the imposition of GD 300 standards is the reason all current at-grade junctions along the A358 are to be closed. The fly-through video of the scheme has shocked local people by the extraordinary complexity of the dual carriageway and junctions, the excessive scale of the central reserve, the extravagance of the boundary and drainage system and the overall urbanisation of what is a country road. The build specification of an Expressway has clearly led to a large inflation of the cost of the scheme. Compounded by the Stage 2 decision to abandon the free-flowing grade separated junction with the M5 the Benefit-to-Cost Ratio is now at the very low level of 1.2 (Paragraph 7.1.3, A358 Technical Traffic Note). National Highways' insistence in proposing a high cost Expressway jeopardises the viability of the whole scheme..	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.  The Benefit-to-Cost Ratio (BCR) is updated as the scheme design evolves. The BCR for the scheme has improved relative to the option selection stage, where a BCR of 1.21 was reported as part of the Preferred Route Announcement. There are several reasons for this, including changes made to the scheme design, but also changes in external influences such as the inclusion of upgrades along the A303 corridor which now have planning consent in our traffic forecasts, which results in more traffic travelling along the A358/A303 corridor. The latest BCR is reported in the ComMA Report (Document Reference 7.4).	N/A
303	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses?	Neroche Parishes agree with development but would prefer slip roads at Village Road.	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.	No
304	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358	The parishes are neutral in their view of this proposal. It will have an inconsequential impact on the traffic through Ashill. The Community Mitigation Proposals provided would be preferable. The Stewley Link will exacerbate severance of the Ashill parish and	The Stewley Link provides improved access for traffic traveling between Stewley and the Ashill junction and therefore could be considered to reduce the effects of severance on Stewley.  As part of the Economic Appraisal of the proposed A358 scheme, a series of non-	N/A

	Orchard Portman with Thurlbear	to connect Stewley with the Ashill junction and provide access to the A358?	create difficulties for farmers working land both sides of the A358, but the parishes acknowledge the benefits to WCH users.	monetised impacts were assessed in addition to the monetised impacts. This included an assessment of the severance of the proposed scheme. The overall assessment on severance is considered to be neutral for the proposed A358 scheme. This is because the potential increases in severance are broadly balanced by relief of severance. The methodology and results of the Economic Appraisal is reported in the ComMA Report (Document Reference 7.4).	
305	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	The proposed link connecting Broadway Street and Thickthorn Lane to the proposed Ashill junction achieves some of this objective. Accordingly, there is support for National Highways' proposals for Broadway Street in this respect. However, National Highways' plans fail to provide access to Broadway, other than by the less convenient Ashill junction, for westbound A358 traffic. There is concern that those wishing to reach Broadway for medical, educational, social or employment purposes may be discouraged from doing so or would use Suggs Lane or Goose Lane, neither of which is suitable for increased levels of traffic.	National Highways traffic forecasts indicate that the scheme will have no notable impact on traffic volumes travelling along Broadway Street or Suggs Lane. Improvements at Southfields and improved journey times on the A358 will reduce the amount of traffic using alternative routes in this area, counteracting any local re-routing of trips between Broadway and locations to the south.	N/A
306	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	The solution to this problem is to provide an off-slip road for westbound A358 traffic at Broadway Street. National Highways' refusal to agree to this access is justified through its adoption of the GD300, Expressway standard, for the whole route. To date, no explanation has been provided as to why adoption of this standard is more relevant to the circumstances of the route than the standard adopted, for instance, for the Sparkford to Podimore section of the A303 currently under construction. That section of the A303 will have slip roads of the type needed at Broadway.	A connection between Broadway Street and the A358 is provided via the proposed Broadway Street link and Ashill junction and this is considered to be an appropriate intervention to ensure connectivity and access to the A358 and other destinations. An additional off-slip directly onto Broadway Street would be in close proximity to the off-slip already proposed at Ashill junction and would be very lightly trafficked, benefiting very few users and would also introduce an additional conflict point onto the A358.  DMRB standards were changed after the A303 Sparkford to Ilchester Dualling Scheme submitted its Development Consent Order application, and therefore this aspect of the two schemes should not be compared with each other.	No
307	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	The path for walkers, cyclists and horse riders proposed between Broadway Street and Horton Cross via the abandoned A358 is strongly supported.	Responding to the consultation feedback, a new overbridge at Jordans Farm would replace the previously proposed route under the A358 through Ding bridge and strengthen the off-road network in this location. It would connect the Old A358 at Horton Cross, Broadway Street and Cad Road and be classified as a restricted byway. The overbridge would be shared use with the landowner and very lightly trafficked.	Yes
308	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road?	The spur off the northern roundabout to Henlade is unwarranted and traffic should flow via the existing Thornfalcon Junction modified to provide the necessary connections. This would discourage a rat-run developing through Henlade and Creech St Michael. It would also reduce costs and reduce the impact the junction will have on the local landscape, including light pollution, particularly from the west. Parishes have similar concerns about a rat-run developing through Stoke St Mary, so any final design must mitigate against this outcome by restricting traffic along Ash Road. (images provided)	As the northern roundabout forms part of the Mattock's Tree Green junction, the function of which is to provide access to and from the A358 dual carriageway, there needs to be a good connection to the local road network and the slip roads at this location. The A358 will encourage traffic between the A358 and areas such as Monkton Heathfield to stay on the dual carriageway and use the route via M5 junction 25 instead of exiting or joining the dual carriageway at the Mattock's Tree Green junction.  National Highways acknowledges the concern about traffic using alternative routes along Ash Road and Stoke Road. The scheme design has been modified to provide a less direct connection between Ash Road and the Mattock's Tree Green junction. This will reduce the attractiveness of the Ash Road / Stoke Road route as an alternative route between the A358 and southern parts of Taunton.	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
309	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for Southfields roundabout?	<p>Parishes neighbouring Southfields have used their extensive experience of using the roundabout to review National Highways' proposals regarding this section of the scheme. It needs to be repeated that to comply with GD 300 the connection between the A358 (West) and the A303 (East) should be via a free flowing full-grade separated junction. Although National Highways states this could be in a future RIS programme, the prospects of it happening in the operational life of the A358 scheme is very low.</p> <p>The graphic below shows a 2007 Highways Agency design for Southfields roundabout. It is truly disappointing that a free-flowing grade separated junction was included in that scheme proposal but not in the 2021 proposal. National Highways thinking is going backwards. (Image provided)</p>	<p>National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).</p>	No
310	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for Southfields roundabout?	<p>The fundamental deficiencies of the current National Highways proposals for the roundabout are that they will:</p> <ul style="list-style-type: none"> <li>· Create an unsafe roundabout configuration;</li> <li>· Exacerbate the already significant congestion on the 5 approach roads;</li> <li>· Fail to separate local traffic from long distance vehicles at this key change of direction for traffic heading between the South West and the South East.</li> </ul> <p>Instead of the limited current proposals, all the following design changes to the roundabout are essential.</p>	<p>National Highways has undertaken operational modelling of all junctions along the A358 corridor, including the upgraded Southfields roundabout. These confirm that all junctions along the A358 will operate within their practical capacity. As part of this process forecast queue lengths at all junctions have also been reviewed to ensure that there are no operational or safety concerns. The new interventions at the roundabout, such as the segregated left turn lane, have been designed in accordance with DMRB standards to ensure the design is safe and provides the capacity to cater for forecast traffic demand. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).</p>	N/A
311	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358?	<p>The western end of the service road should terminate at the existing Staple Fitzpaine junction. However the bridge should be moved back to its original location to cross the A358 at the end of Staple Fitzpaine road. Local residents of Neroche Parish disagree that the Hatch Beauchamp overbridge should be moved about 250m Northwest.</p>	<p>The 'service road' provides important connectivity between Ashill and Hatch Beachamp via the proposed Village Road overbridge which also connects into Staple Fitzpaine Road.</p> <p>The relocation of the Village Road overbridge further north-west was taken following consultation feedback and support for this proposal.</p>	No
312	Neroche Parishes of Bickenhall, Curland, Staple Fitzpaine and Orchard Portman with Thurlbear	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout?	<p>(1) The Preliminary Environmental Information Report (PEIR) introduces the scheme with the following statements:</p> <p>1.2.2. The programme of improvements, as set out in the UK government's Road Investment Strategy (RIS) made a commitment to "... upgrade all remaining sections of the A303 between the M3 and the A358 to dual carriageway standard, together with creating a dual carriageway link from M5 at Taunton to the A303...".</p> <p>1.2.6. This proposed scheme proposes to upgrade the</p>	<p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p>	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			A358 to high-quality dual carriageway between Southfields roundabout on the A303 and the M5 junction 25 at Taunton to address the traffic issues and long delays currently experienced along the route. (2) The scheme does not comply with the RIS objective as it terminates at both ends of the link at roundabouts, which are the sources of congestion. Consequently the scheme fails the RIS 1 objective of building an 'Expressway Corridor' from the M3 to Exeter and beyond, by not providing a free flowing trunk road able to sustain an average speed of a mile a minute, 60mph.	Mile a minute speeds are expected to be representative of the A303/A358 corridor following improvements, however this is not a design requirement applied to individual schemes along the corridor.	
313	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	1. Introduction  1.1 This response to the statutory consultation is submitted by North Curry Parish Council. We appreciate that National Highways (NH) has provided a feedback questionnaire to enable respondents to express their views. However, as on previous occasions, the Council considers it more appropriate to comment in narrative form. We believe it helps our case to explain our reasoning. 1.2. The Council is the local government representative of approximately 1,800 residents, all of whom visit Taunton for a variety of purposes, including employment, shopping, education and leisure. Although neither the existing A.358 nor the route now proposed passes through the parish boundary, the junction at Mattock's Tree Green is located on the principal route for businesses and residents travelling from North Curry and the wider area to Taunton and beyond.	National Highways welcomes the comments raised by North Curry Parish Council.	N/A
314	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	1.3 We note that the scheme is one of those which have been allocated funding for improvements to the Strategic Road Network. It constitutes a major element of the proposal to improve connectivity between London and the south east and the south west of England, the upgrading of the A.303/A.358 corridor being regarded by business leaders as essential to unlock the region's potential for growth.	National Highways acknowledge the comments provided in relation to the scheme's funding as part of the Strategic Road Network funding allocations for the A303/A358 corridor.	N/A
315	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	1.4 From a local perspective, there has been a strength of opinion for many years that Henlade needs a bypass, which would provide clear improvements in air quality in the area, and that improved traffic flows at Junction 25 (J.25) of the M.5 motorway are long overdue.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
316	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	2. Points of Access on the New Route  2.1 The existing A.358 serves as both a national and local route between the A.303 and Taunton and the motorway. Along that section of the road, there are some 30 points of access and egress, (not including those to individual properties), which allow local people and those serving them to go about their everyday business. The proposal being put forward by NH reduces those access	For the A358 to become a high quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed, complying with Design Manual for Roads and Bridges CD 122. As such, all of the direct local road accesses have been removed and access to the A358 is from new grade separated junctions at Mattock's Tree Green and Ashill.  The scheme has been designed to the standards set out in GD300. As such, any new intermediate junctions that are constructed as part of the scheme would need to take the form of a full grade- separated junction similar to the one near Ashill or Mattock's Tree Green. Factors such as the cost, value for money and environmental impacts of this	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			points to just two locations, at Mattock's Tree Green and Ashill.	additional junction also need to be considered. A review of the amount of traffic that would be likely to use additional junctions does not justify the costs or environmental impacts of these junctions.	
317	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	<p>2.2 Highway safety is, of course, paramount. The scheme objectives are set out in chapter 2 of the Preliminary Environmental Information Report (PEIR), but those relating to safety (and others) are better described in the Non-Technical Summary. We note, at page 3, the NH view that the existing single carriageway sections "act as congestion bottlenecks ... causing delays to road users, and they add to an increased risk of accidents ... Many road users try to avoid the traffic congestion by diverting onto smaller local roads, which then increases the level of traffic in surrounding villages."</p> <p>2.3 The way in which the scheme objectives are to be achieved is set out at page 6. Under the heading of Safety, NH claims that the scheme "will see the existing road junctions and private accesses closed with new connections and junctions provided, making journeys safer by avoiding conflicting traffic-turning movements. The proposed scheme would also improve safety by encouraging road users to use the new A358, rather than seeking alternative local routes to avoid congestion into Taunton..."</p>	National Highways acknowledges this comment. The A358 dualling will eliminate congestion and bottlenecks along the scheme, which will reduce the amount of rat running currently seen on the local road network. The closure of at-grade junctions will bring safety improvements by reducing conflicts between vehicle movements.	N/A
318	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	2.4 We do not know the evidential basis on which NH makes these statements, nor are we aware that this section of the A.358 has a significantly bad traffic accident record. What is clear from the Community Forum and other briefings, however, is that many of those representing local opinion are not convinced. Instead, the contrary view is expressed, that the scheme will result in an increase in traffic using the local highway network, with the dangers inherent in that. It must be acknowledged that some local roads cannot accommodate two way traffic along their entire length. (It – almost – goes without saying: we expect NH to have consulted the County Council as local highway authority on the detail of its proposals, and the County Council to have given its formal approval thereto.)	<p>The accident analysis undertaken as part of the scheme appraisal shows that the existing road has a worse accident rate than the national average for this type of road. The forecast accident rate with the scheme is much lower, with a forecast number of accidents below that of the forecast number without the scheme, even with the higher traffic flow using the A358 with the scheme. That is because dual carriageways are significantly safer than single carriageway roads, with fewer overtaking related and junction related accidents.</p> <p>The methodology and results of the traffic modelling (including the road safety analysis) is reported in the ComMA Report (Document Reference 7.4).</p>	N/A
319	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	2.5 We have noted that the scheme will result in there being no direct access to the new route for settlements on either side of the A.358 between Mattock's Tree Green and Ashill. Following representations by the A.358 Parish Councils' Informal Group (PCIG), NH agreed to retain that length of the existing A.358 which provides access to the village road north serving Hatch Beauchamp, connecting to the new route via the junction at Mattock's Tree Green. We agree with that decision.	National Highways acknowledges the range of views expressed, including those received in support of the project.	N/A
320	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	2.6 PCIG has made known its objections to the reduction in access points from the local highway network to the new road. We ourselves have reservations. In this context, what particularly concerns us is the ability of the emergency services to gain access from the new road to the local highway network. The proposed restriction of	National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			access to local settlements by way of Mattock's Tree Green and Ashill only will apply equally to emergency vehicles.	<p>due to entirely avoiding the need to interact with the high volume of fast moving traffic on the A358.</p> <p>Checks on journey times between local villages and both the M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. Information on this was also presented in interactive webmaps at supplementary consultation. These show that generally there are reductions in overall journey times due to the faster speed of the scheme, although a small number of trips have slightly longer journey times. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.</p> <p>The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).</p> <p>National Highways have met with the fire, police and ambulance services during the development of the preliminary design to discuss the scheme proposals, of which they are supportive.</p>	
321	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	2.7 We know that PCIG has proposed the creation of an off-slip and on-slip eastbound and an on-slip westbound close to the existing junction with the Hatch Beauchamp village road south, linked to the proposed overbridge. We believe the proposal has merit; it should be examined to establish whether, if it were built, highway safety would be put at risk. It is worth noting that the junction is approximately equi-distant between J.25 and Southfields and between the proposed junctions at Mattock's Tree Green and Ashill.	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.	No
322	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	2.8 If no discussions have yet taken place with the emergency services, we would urge NH to consult with them about the ease of access to businesses and residences in the wider community which they might be required to attend. As a prime example, the services should be consulted on the benefit of retaining the means of access and egress at Hatch Beauchamp village road south, and if they express support for it, it should add weight to the PCIG proposal. We look to ensure that, in general terms, they having been consulted, the emergency services will be satisfied with the proposals set out in the scheme. If not, NH must review them in order to take account of and to resolve any concerns.	<p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high-quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with the high volume of fast moving traffic on the A358.</p> <p>Checks on journey times between local villages and both the M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. 323	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	2.9 Since the A.358 first came into being, it has formed a crucial part of the local highway network. The NH scheme, as currently envisaged, will restrict a substantial volume of local traffic from direct access to it. If the scheme is to proceed in accordance with the planned programme, NH must demonstrate its modelling of the effects the restrictions will have on direct access, with	National Highways has also been engaging closely with Somerset Council as the local highway authority for advice and comment on the local road network. During this stage of scheme development, National Highways and Somerset Council have jointly developed a Local Roads Strategy (LRS) and Local Roads Assessment (LRA) for the scheme. The LRS assesses suitable design methodologies and standards for those parts of the local roads network affected by the scheme while the LRA identifies risk and proposed mitigation.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			highway safety being the critical factor, sufficient to enable it to substantiate its proposals at Planning Inquiry.	The methodology and results of the traffic modelling, including the forecast accident analysis and further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	
324	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3. The Landscape  3.1 The Council is aware that there is a body of opinion which supports limiting this scheme to a bypass for Henlade and improvements to the junctions at the M.5 and Southfields. That opinion is shared by at least one member of the Council. Nonetheless, we understand the basis on which funding has been provided, that the dualling of the A.358, together with the dualling of those sections of the A.303 as far west as Ilminster where currently there is none, forms part of the plan to provide faster connections with more reliable journey times from London and the south east to the south west.	National Highways acknowledge the comments provided in relation to the scheme's funding as part of the Strategic Road Network funding allocations for the A303/A358 corridor.	N/A
325	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3.2 Whilst the decision to provide the link is understood as a matter of principle, concern remains – and is shared by the Council as a whole – about the impact that the construction of a dual carriageway along the length of the A.358 between J.25 and Southfields will have on the landscape. In particular, it will result in the loss of long established hedgerows and woodlands, as well as younger woodland planted when this road was built some 40 years ago. These hedgerows and woodlands are home to many species of wildlife, and have been so, perhaps in some cases, since time immemorial.	National Highways acknowledges North Curry Parish Council's concern over the impact of construction on the landscape and has taken this into consideration.  Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses and reports the landscape and visual impacts of the proposed scheme and Chapter 8 Biodiversity reports on hedgerows and woodland.	N/A
326	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3.3 The comprehensive work undertaken by NH's environmental consultants, including an audit of the landscape affected, is set out in the PEIR. NH clearly recognizes the impact that the scheme will have. We share the view (at para. 7.11.2) that "The greatest long-term and visual effects of the proposed scheme options will be experienced where the proposed scheme deviates from the existing road corridor and where new junctions or overbridges are proposed."	National Highways welcomes support for research into the environmental impact of the scheme.	N/A
327	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3.4 Those effects are clearly identified in Table 8-11, where we note that of the 11 categories identified as arising during the construction phase, seven are described as "permanent/irreversible", three are described as "permanent", and only one is described as "temporary/reversible". We note too that a number of engineering design measures are proposed to avoid significant adverse environmental effects, such as habitat loss, and that the scheme includes mitigation within the construction phase to avoid or reduce the inevitable impacts it will have. Mention is made of an intention to "create large areas of tree planting within existing hedgerows to strengthen the landscape character of the rural landscape." We would ask specifically that, when that work is undertaken, NH commits to protecting, as far as is practicable, any wildlife habitats which might be disturbed as a consequence.	National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow and woodland habitat creation, as well as new water channels and ponds. These areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358. These areas of habitat creation will be subject to specific management to maximise their value to local wildlife. Where the establishment of these habitat creation measures i.e. tree planting, pond excavation, have the potential to cause disturbance to existing wildlife populations, the works would be undertaken using appropriate methods and at the appropriate time of year to reduce any impacts.  National Highways has produced an Environmental Management Plan submitted as part of the ES Appendices (Document Reference 6.4 Appendix 2.1) which outlines how the impact of the construction on the environment, the road network and local communities will be managed.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
328	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3.5 It is inevitable that the construction, much of which will be off line, will lead to the loss of many trees. We note, at para. 7.10.3, that the proposed replacement tree planting will be monitored every year for the first three years, and every two to five years for the next 12 thereafter. It is acknowledged, at para. 7.10.4, that the proposed planting will be monitored "to ensure it thrives and grows to the desired extent, so that it becomes effective as mitigation during the long-term operation of the new road infrastructure." It is not stated specifically, but we look for a commitment to a comprehensive plan to replace every tree which is lost as a result of the scheme. NH will know that it is common practice, in order to ensure replacement trees come to maturity, that at least three trees are planted for each one removed. If that is not applied in this case, we look for a commitment from NH that any replacement tree which fails during the course of the 15 year monitoring period will also be replaced.	A Landscape and Ecology Master Plan (LEMP) (Document Reference 6.4 Appendix 2.1 Annex D) has been prepared, that details the proposed mitigation and enhancement measures. This document also details management prescriptions and monitoring protocols for all habitat creation areas to ensure the successful establishment and long-term viability of the habitats created.  Within this document there is a commitment to review mitigation planting on an annual basis for the first 5 years, with any dead, damaged or diseased specimens to be replaced in the next available planting season with others of similar size and species.  It may not be practical or desirable to replace any tree which fails during the course of the 15-year monitoring period. Some mitigation types will be planted at densities that may require thinning at certain times to best achieve best growth, canopy cover, and establishment to deliver required environmental functions, for example habitat creation or visual screening. Failures of trees, either unforeseen or through being outcompeted, may not be replaced if the mitigation is achieving its intended outcomes in line with the overall LEMP.	N/A
329	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3.6 The documents published by NH which provide detail of the scheme proposals include a fly through video. That video shows wide areas of embankment along the route which appear to be just grass. If this is an accurate portrayal, it would change the character from that of the existing road, where vegetation in the form of hedgerows and woodlands is much closer to the carriageway. When the Development Consent Order (DCO) application is lodged, we look to these areas being designated with a planting scheme of native trees and shrubs.	Planting proposals are shown on the EMP (Document Reference 6.4, Appendix 2.1) submitted as part of the ES (Document Reference 6.2). Areas of tree/woodland/screening planting and hedgerows with trees are proposed in locations where they are deemed to be required and most effective in mitigating impacts, however numbers of proposed trees are not quantified at this stage of design as the mixes, densities, and layouts will be developed at the detailed design stage, subject to successful DCO consent.	N/A
330	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3.7 The video also shows long stretches of solid fencing along the route, doubtless to reduce the effects of traffic noise on adjoining properties. The video portrays no softening of the fencing with vegetation, although there does appear to be sufficient space to provide planting in front of it. The visual impact without planting will severely detract from the appearance of the corridor for road users, and we look to these lengths of fencing being screened with new planting wherever possible.	The ES (Document Reference 6.2) includes an EMP (Document Reference 6.4, Appendix 2.1) which identifies proposed tree planting and other landscaping measures to avoid, reduce, and mitigate impacts of the proposed scheme. Where is possible to do so, mitigation measures are implemented to avoid/minimise impacts on the local character and visual amenity. This includes consideration of highways and structures design, environmental earthworks, acoustic barriers, planting, and hedgerow improvements.	Yes
331	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	3.8 The impact of the scheme on the landscape will be severe. We acknowledge that a thorough audit has been undertaken, and look to a comprehensive planting scheme being put in place and maintained in the years following, so that the new highway will be hidden from view in a rejuvenated landscape.	ES Chapter 2 The project and ES Chapter 7 Landscape and visual effects (Document Reference 6.2) describes embedded and essential mitigation measures to avoid, reduce, and mitigate impacts of the scheme on landscape.	N/A
332	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4. Junction 25  4.1 Improvements to the highway network are driven by traffic numbers. The improvements proposed in respect of J.25 include carriageway widening (which is already completed), a segregated left turn lane from the A.358 eastbound to the M.5 northbound on-slip, an additional lane to the southbound off-slip, a capacity upgrade to the Nexus 25 roundabout and its link road to J.25, together with changes to the traffic light settings.	National Highways acknowledges this comment.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
333	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.2 We recall that in the first consultation round, the Pink option, which offered the best benefit-cost ratio, was predicted to generate a volume of traffic travelling between the M.5 and the A.358 sufficient to justify a separate motorway junction. With no separate junction now to be constructed, that traffic must pass through the southbound on-slip or northbound off-slip to J.25. We find it scarcely credible that the current scheme does not anticipate the necessity to provide an additional lane to either.	<p>The scheme is based on the route progressed following the Preferred Route Announcement made in June 2019 following public consultations in 2017 and 2018. The alternative options assessment process is set out in Chapter 3 Assessment of Alternatives of the ES (Document Reference 6.2). Please refer to Section 3.1 of the Consultation Report (Document Reference 5.1) for further information.</p> <p>The latest proposed A358 scheme design includes upgrades to the M5 junction 25, in addition to the capacity enhancements that were made through recent improvements by Somerset County Council (now Somerset Council), which opened to traffic in January 2021. The capacity requirements of M5 junction 25 and the Nexus 25 junction were revisited during the preliminary design stage to assess how the design needs to be amended to cater for the additional traffic that would have avoided passing through these junctions in the Pink option.</p> <p>National Highways has undertaken operational modelling of all junctions along the A358 corridor, including the upgraded M5 junction 25, based on the current scheme proposals. These confirm that all junctions along the A358 will operate within their practical capacity. As part of this process forecast queue lengths at all junctions have also been reviewed to ensure that there are no operational or safety concerns. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).</p>	N/A
334	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.3 In its reasoning for such non-provision, NH has advised us that the current scheme will attract less traffic than the Pink option, because in the case of the Pink option, "... traffic travelling between the A358 and M5 towards/from Exeter had a greater journey time saving." So we are to conclude that this scheme, now to be part of the Strategic Road Network, will result in less traffic using the route, and conversely, encourage more traffic to continue to use the manifestly unsuitable single carriageway A.303 across the Blackdown Hills. That is disappointing.	<p>The aim of the proposed A358 scheme is not necessarily to replace the A303 through the Blackdown Hills as the main route to Exeter and beyond from locations in the South East, but to increase network resilience in the area by providing a viable alternative route in the event of the A303 through the Blackdown Hills becoming congested or having to close for an incident.</p> <p>Other aims of the proposed A358 project include decreasing journey times, increasing journey time reliability and improving safety for traffic using the A358.</p>	N/A
335	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.4 The latest traffic modelling data, set out in Figure 6-1 of the Technical Note, published by NH as part of the current public consultation round, predicts that the Henlade bypass section of the new road will attract 42,000 vehicles at scheme opening (in 2028) and 52,000 in 2043. From other data in the Table, it can be seen that those figures assume an increase in traffic numbers from those in the no-scheme world of 15,000 at scheme opening and 20,000 in 2043. Assuming an equal westbound and eastbound traffic flow, that suggests a westbound traffic flow of 21,000 at scheme opening, of which 7,500 is additional traffic, and 26,000 in 2043, of which 10,000 is additional traffic attracted by the scheme.	The quoted figures have been superseded by the modelling of the latest design put forward at the 2022 supplementary consultation. The latest traffic modelling results are reported in the ComMA Report (Document Reference 7.4).	N/A
336	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.5 The prediction of additional traffic is corroborated by NH. Despite its contention in the course of comparing the current scheme with the Pink option, referred to in para. 4.3 above, NH has advised us that: "I can confirm that the extra traffic on the A358 in the with-scheme scenario when compared to the without-scheme scenario, reflects the re-routing of traffic onto the A358 from alternative routes with the scheme in place. For example, a person travelling in a car between Sparkford and Exeter may, without the scheme in place, choose to take the A303 all of the way. With the proposed A358 scheme in place, their journey is likely to be quicker if they take the A303,	<p>The aim of the proposed A358 scheme is not necessarily to replace the A303 through the Blackdown Hills as the main route to Exeter and beyond from locations in the south east, but to increase network resilience in the area by providing a viable alternative route in the event of the A303 through the Blackdown Hills becoming congested or having to close for an incident.</p> <p>Other aims of the proposed A358 project include decreasing journey times, increasing journey time reliability and improving safety for traffic using the A358.</p>	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			then the A358 to the M5 and continue southbound on the M5 to Exeter ..." We agree entirely.		
337	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.6 This scheme, if we need to be reminded, is designated as a Nationally Significant Infrastructure Project under the provisions of the Planning Act 2008 and forms part of the Government's Strategic Road Network within its Road Investment Strategy, with a cost to match, of some £27.4 billion. The scheme is, as NH acknowledges, "a critical part of this investment. It is one of several improvements on the A303 and A358 designed to make it easier to travel across the south of England from the M3 to the M5 and beyond."	National Highways acknowledges this comment.	N/A
338	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.7 Given the place that the scheme has in the Road Investment Strategy, it is reasonable to assume that, for example, much of the A.358 westbound traffic of 21,000 will take the M.5 southbound. As NH has noted, a journey from the south east to Exeter (and beyond) "is likely to be quicker if they take the A303, then the A358 to the M5 and continue southbound on the M5 to Exeter." It is reasonable, too, to make the same assumption in respect of traffic travelling in the opposite direction.	National Highways' traffic model includes information about trip patterns and route choice. The forecasts presented are therefore based on the most likely route choice from all trips that would use the road network in the future.	N/A
339	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.8 To return to the current modelling data, it tells us that of the predicted 21,000 vehicles which take the A.358 westbound at scheme opening, only 5,800, i.e. 27%, will take the M.5 southbound. 15 years later, the figure is 33%. We are astonished; we ask where the remaining 73% or 67% is heading. Not, according to the data, along the A.358 westbound, or the M.5 northbound. The Road Investment Strategy articulates the intention to create a second direct link between London and the south east and the south west. Taunton is not the centre of the south west, either in business or in tourist terms. It sits alongside the route, but the final destination for the great majority of traffic will lie further to the south west.	For details of the turning movements forecast for M5 junction 25, please consult the operational model outputs in the appendices of the ComMA Report (Document Reference 7.4).	N/A
340	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.9 We question the contention that the number of vehicles which will travel along the newly built dual carriageway A.358 westbound, and then take the M.5 southbound – or that travelling in the opposite direction - will be little more than the number of vehicles which will continue to pass along Haydon Lane after scheme opening, or through the centre of Henlade, after the village has been bypassed by the new route. But that is what the latest traffic monitoring data is purporting to tell us.		N/A
341	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	4.10 Other traffic modelling data is inconsistent with the advice offered in para. 4.5 above. However, we will focus here solely on J.25. The latest version of the data should be re-examined. In our view, the evidence, supported by comments shared with us by Highways England/NH staff at different times throughout this process, demonstrates that the M.5 southbound on-slip and northbound off-slip will need to accommodate a significantly higher volume of traffic than the current version of the modelling data suggests. In that context, it poses the question of	National Highways has undertaken operational modelling of all junctions along the A358 corridor, including the upgraded M5 junction 25. These confirm that all junctions along the A358 will operate within their practical capacity. As part of this process forecast queue lengths at all junctions have also been reviewed to ensure that there are no operational or safety concerns. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			whether additional lanes should be constructed on the southbound on-slip and northbound off-slip to ease traffic flow.		
342	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	5.2 We have been informed of the PCIG proposal for this junction, which in relation to the NH proposal, removes the new on/off slip road from the existing A.358 to the new junction north roundabout and retains the existing carriageway west and east of the A.378 and the existing traffic signals. The initial NH response to this proposal is "Not proposed for statutory consultation but potential refinements following outcomes of statutory consultation". We are surprised by the response; we are firmly of the view that the PCIG proposal does not stand scrutiny.	National Highways acknowledges the comments made in relation to the design of Mattock's Tree Green junction layout. The proposed design as part of the DCO application accounts for consultation feedback from the statutory and supplementary consultations and is considered the most appropriate for the volume and movement of traffic in this location. This includes a change from the statutory consultation proposals where a new direct connection from Village Road to the northern roundabout of Mattock's Tree Green junction is now proposed. This is supplemented with a restricted byway and offline cycle route and dedicated walking, cycling and horse-riding crossing at the A378 Langport Road. These facilities utilise the redundant section of existing A358.	N/A
343	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	5.3 The underlying premise of the proposal is that "If the spur remains, the Henlade side of Thornfalcon Junction will be closed and all local and through traffic will be funnelled onto roundabout north. This will encourage a rat-run from the M5 through Henlade and from the A38 through Creech St Michael via the spur to roundabout north ... The ease of this route that emphasises its connection to the dual carriageway will be apparent on all sat-navs..."		N/A
344	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	5.4 The PCIG solution to this imaginary problem is to move the junction some 30 metres to the north. There is no explanation as to how moving the junction such a short distance would eliminate what is perceived as the threat of a rat-run. Nor is there an explanation as to why long distance traffic from the M.5 would leave the new A.358 which bypasses Henlade in order to pass through the centre of Henlade, thus being obliged to undertake a series of additional manoeuvres - a less safe environment for everyone - before re-joining the A.358 at Mattock's Tree Green.		N/A
345	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	5.5 Although NH has indicated that it is prepared to review the PCIG proposal following the statutory consultation process, it has already undertaken a comparison with its own. The "benefit" of the PCIG proposal is described as providing "a more defined 'split' between local and A358 traffic", but although "the low demand movement ... is made more direct and quicker ... the high demand movement ... is made less direct and slower." It seems to us self-evident, that in the context of this scheme, the high demand movement should be accorded greater priority over the low demand movement. We note too that against this dubious benefit "... there is likely to be blocking back of traffic to the roundabout during typical signal cycles causing queuing and possible safety risk."		Yes
346	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	5.6 NH also notes that "HGVs cannot track left from roundabout north onto the existing A358 (WB) without encroaching into Lane 2. A segregated left turn would need to be provided and currently there is insufficient space to provide this along with other signalised junction infrastructure." In addition, for the walking, cycling and		As an outcome of consultation, the northern roundabout at the dumbbell junction has been modified with the link to Village Road connecting into this. This allows a signal-controlled Pegasus crossing to be provided at the A378 Langport Road, between the existing A358 and Village Road link (north). The redundant A358 would be repurposed as a restricted

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			horse-riding community, "The space requirements to accommodate this crossing would further impinge on the space constraints highlighted ... East-west movement would also be more challenging. Overall this is likely to be more hazardous for WCH users."	byway and, including the Pegasus crossing, allows users to avoid the roundabout. This would be both safer and more pleasant for walkers, cyclists and horse-riders.	
347	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	5.7 The PCIG proposal is based on a false premise and its solution is to create what is a less safe route. NH's traffic modelling data is as clear an indication as any as to the effect that a bypass for Henlade will have on the volume of traffic passing through the village, and PCIG has failed to produce any evidence to refute it. As NH's initial analysis of the proposal has already identified a preponderance of disbenefits over benefits, we question why NH should look at it again following statutory consultation. For highway safety and other reasons, NH should proceed with its own scheme proposal.	National Highways acknowledges the general support received in relation to the design proposals.	N/A
348	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	6. Conclusions  6.1 Before submitting its application for a DCO, NH should consult with the emergency services to ensure that those services are satisfied they can undertake their responsibilities without undue hindrance because of a limited access from the new road to the local highway network. If it proves advisable, the scheme must be amended to ensure that the needs of the emergency services are fully accommodated.	National Highways acknowledges comments provided in relation to consultation with the emergency services. The relevant prescribed bodies (the relevant fire and rescue service and police and crime commissioner) have been consulted at both statutory and supplementary consultation stages. Whilst no responses have been received to the consultations, National Highways have met with the fire, police and ambulance services during the preliminary design to discuss the scheme proposals, of which they are supportive.	N/A
349	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	6.2 In particular, NH should consider the benefit of an off-slip and on-slip facility close to the existing Hatch Beauchamp village road south, as proposed by PCIG.	Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.	N/A
350	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	6.3 As part of its application for a DCO, NH should publish its proposals for protecting the landscape from the most damaging effects of the new highway, together with a comprehensive plan for tree planting and other landscaping measures.	The Landscape and Visual Assessment (LVIA) assesses and reports the landscape and visual impacts of the scheme on local landscape and visual receptors, as outlined in ES Chapter 7 Landscape (Document Reference 6.2). Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity. The environmental mitigation presented on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3) details how lost trees and vegetation will be mitigated. Areas of tree/woodland/screening planting and hedgerows with trees are proposed in locations where they are deemed to be required and most effective in mitigating impacts, however numbers of proposed trees are not quantified at this stage of design as the mixes, densities, and layouts will be developed at the detailed design stage, subject to successful DCO consent.	No
351	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	6.4 The latest version of traffic modelling data has underestimated the growth in traffic volumes, insofar as it relates to A.358 westbound traffic expected to use the M.5 southbound on-slip and M.5 northbound traffic expected to use the M.5 northbound off-slip at J.25 following scheme opening. Before proceeding with the application for a DCO, NH should re-examine the data, and within its construction plans, make provision for additional lanes to accommodate the larger number of vehicles which other evidence demonstrates is likely to use the route.	The modelling work undertaken, including the forecasting of traffic growth, follows TAG (Transport Appraisal Guidance) published by the Department for Transport. The methodology and results of the traffic modelling, including all traffic growth assumptions and details of developments incorporated into the model, is reported in the ComMA Report (Document Reference 7.4).	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
352	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	6.5 NH should acknowledge that the PCIG proposal for the new Mattock's Tree Green junction is less acceptable in highway safety terms, and should, as part of its application, promote its own scheme proposal for approval.	National Highways considers that the scheme proposals at Mattock's Tree Green for connecting into the existing A378 and A358 are appropriate and provide greater benefits than alternative layouts suggested by the PCIG (also known as Community of Parishes).	No
353	North Curry Parish Council	Do you have any other comments you would like to make about our proposals?	6.6 The Parish Council supports the scheme in principle, subject to the caveats expressed, and looks to the provision of new infrastructure in order to meet the needs of current and future generations.	National Highways acknowledges the general support received in relation to the design proposals.	N/A
354	Ruishton and Thornfalcon Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Traffic-calming measures will be required for the old A358 through Henlade to restore the residential environment and deter its use as a rat-run; there is a desire to provide this section of road to have a boulevard feel. However we are concerned that the considerable decrease of traffic on the old A358 through Henlade, as a consequence of the scheme, may encourage this from the ever growing development of Monkton Heathfield resulting in traffic jams in our communities and increased pollution, both in terms of carbon monoxide and noise. This being the case funding should be found to mitigate this affect on the Parish.	The A358 scheme will improve congestion issues and therefore travel times for the route via M5 junction 25 and Toneway. This, in conjunction with the improvements to the Creech Castle junction on the A358 Toneway, which have now been completed, will encourage some traffic that was observed to travel via Creech St Michael to switch away from that route.  The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.  Future optioneering or enhancements along the full corridor of the existing A358 to Henlade would then be a matter for Somerset Council as the local highways authority.	Yes
355	Ruishton and Thornfalcon Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	We agree with the closure of the junction between Greenway Lane and the existing A358 and that there will be no direct access to the new route from Greenway Lane.	National Highways acknowledges the support for the proposals in relation to Greenway Lane.	N/A
356	Ruishton and Thornfalcon Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Ruishton and Henlade suffer from frequent flooding and a considerable amount of hard surfacing will be constructed with the scheme which. If water run off is not properly contained it will add to the area's existing flooding problems as the "Henlade Bypass" runs through Flood zone 3; more than just attenuation ponds are needed. However before the construction period, care will need to be taken regarding run off and anti flood measures will need to be put in place.	The proposed drainage proposals for the scheme are based on capturing and containing surface water generated by hardstanding areas and attenuating them down to existing rates of runoff (greenfield runoff rate). Therefore, surface water generated by any additional hardstanding is controlled to pre-development runoff rates. Furthermore, existing surface water flow routes have been taken into account to ensure surface water is not inadvertently directed towards sensitive receptors.	N/A
357	Ruishton and Thornfalcon Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Although it is realised that the section of the old A358 through Henlade will be the responsibility of Somerset Council, we would like to see National Highways take part in a Corridor Study as proposed in the Ruishton & Thornfalcon Parish Neighbourhood Plan.	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.  Future optioneering or enhancements along the full corridor of the existing A358 to Henlade would then be a matter for Somerset Council as the local highways authority.	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
358	Ruishton and Thornfalcon Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	We are concerned about the levels of pollution during the construction phase of the new route and also after the completion of the scheme. What is the likely impact going to be on our local communities?	The ES (Document Reference 6.2) predicts no exceedances of the Air Quality Objectives at human receptors associated with changes in operational traffic flows or speeds in the Base, Do Minimum (without scheme) or Do Something (with scheme) scenarios. With no exceedances of the Air Quality Objectives at receptor locations and improvements in the Henlade Air Quality Management Area (AQMA) it is considered the proposed scheme would have no significant effects on air quality in relation to human health. Overall, the scheme is considered to have a beneficial impact on local air quality in relation to human health due to the reductions in NO2 concentrations within the AQMA. The impacts of construction dust associated with the construction of the new route are predicted to be negligible with implementation of best practice mitigation measures, which will be outlined in the environmental management plan. An assessment of construction traffic was scoped out based on the standards outlined within DMRB LA 105 Air Quality.	N/A
359	Ruishton and Thornfalcon Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	As we've already suffered years of disruption on our roads in Ruishton, Henlade and the surrounding areas through various Somerset Council Highways improvement schemes, there is much concern at the level of disruption this scheme will cause and the time frame of that disruption. What assurances can you provide that this is not going to deteriorate further due to ongoing construction work in the future?	National Highways recognises concerns over the disruption to the local road network and communities during construction of the scheme and will seek to reduce disruption while maintaining highway safety. National Highways has produced a Construction Traffic Management Plan which forms part of the Environmental Management Plan submitted alongside the ES (ES Appendix 2.1, Annex B, Document Reference 6.2) which outlines how the impact of construction on the environment, the road network and local communities will be managed. National Highways has worked with the local highways authority, Somerset Council to identify any potential mitigation measures required for the local road network as a result of the scheme and will continue to engage with the relevant authorities during construction.	N/A
360	Ruishton and Thornfalcon Parish Council	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	There is reference to a large Works Compound and other smaller ones in Henlade. The exact locations need to be identified and measures put in place to manage the construction traffic in order to minimise the effect on the surrounding community and the A358.	National Highways is committed to keeping the A358 open to traffic and will seek to minimise disruption while maintaining highway safety. ES Appendix 2.1 Environmental Management Plan and Construction Traffic Management Plan (ES Appendix 2.1, Annex B, Document Reference 6.4), set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highways authority, Somerset Council, to identify and manage any potential mitigation measures required.  Following Statutory Consultation for the scheme, a revised main construction compound was put forward at supplementary consultation, as shown in the DCO submission. This is located off the A378 close to Mattock's Tree Green. The provision of a temporary bridge over the existing A358 is included in our proposals to significantly reduce the volume of construction traffic that would use the public highway during the works. As well as linking the construction site which would otherwise be severed by the existing A358, the temporary bridge also links the construction site to the construction compound.	N/A
361	Ruishton and Thornfalcon Parish Council	Do you have any other comments you would like to make about our proposals?	During the construction of the Park & Ride Site a large site containing a Roman Cemetery and also an ancient roundhouse, the largest found in England, with an associated burial ground was uncovered. A full and proper archaeological survey of this area is required before excavators move in.	National Highways acknowledge the significance of the archaeological remains found at the Taunton Gateway Park and Ride site. Geophysical survey and archaeological trial trenching have been carried out for the project and the results, along with a Detailed Archaeological Mitigation Strategy, have been presented in the ES Chapter 6 Cultural heritage and associated appendices (Document Reference 6.2 and 6.4).	N/A
362	Ruishton and Thornfalcon Parish Council	Do you have any other comments you would like to make about our proposals?	We are strongly in favour of the improvements to the section of road through Henlade and welcome the by-passing of Henlade; this will make vast improvements to traffic including congestion, air quality and quality of life.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
363	Ruishton and Thornfalcon Parish Council	Please let us know if you have any comments on our proposals for construction, including the proposed phasing.	On page 27 of the Public Consultation booklet under Phase 1 Ashill, Village Road and Bickenhall Lane new bridges are mentioned but not Stoke Road over bridge. This needs to be done in Phase 1.	During phase 1 National Highways would maintain one lane open in each direction while we construct the new Stoke Road overbridge / road alongside. Stoke Road overbridge would be built in Phase 1 to ensure connectivity between Henlade and Lower Henlade is maintained.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
364	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users? Please let us know the reasons for your response	Access needs to be maintained to all the villages but we question the need for a bridge here when there will be a bridge further along at the end of Village Road. This junction should be closed off as Bickenhall Lane is far too narrow to encourage more traffic along here.	The A358 scheme has been amended in response to consultation feedback. Bickenhall Lane overbridge will be for agricultural traffic from local landowners and for walkers, cyclists, horse-riders and carriage drivers. General traffic travelling by motorised vehicles will be able to cross the A358 at the nearby Village Road overbridge instead.	Yes
365	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Without a bridge Lower Henlade will be cut off from Henlade including the villages that surround Henlade whilst access to Taunton and the M5 would be made much more difficult so we agree that a bridge should be erected. However no provision seems to have been made for pedestrians to gain access to Henlade or Lower Henlade thus cutting them off completely. We would like to see measures incorporated in the plan to ensure that this section of the road doesn't become another 'rat run'.	The Stoke Road overbridge would maintain the walking, cycling and horse-riding link between Henlade and Lower Henlade while avoiding a direct connection with the A358.  There are no footways along the existing road; the footpath diversions would have a marginal impact on the number of walkers; and the collision records do not suggest an existing safety risk. National Highways considers that the verge provided as part of our proposals (1.5m) would provide an appropriate safety margin for walkers and is consistent with existing levels of provision along Stoke Road.	No
366	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	We question the need to make the proposed connection to the old A358 at the Nags Head a dual carriageway as this will become a local road and according to National Highways assumptions traffic through Henlade will be reduced by 88% when the new road is opened. To make the old road more user friendly to pedestrians, cyclists, horse riders etc one side of each dual carriageway need only be made accessible for this category. If this is not possible, and as there will be no need for the existing dual carriageway, a simple two-lane road at this point would suffice which would then deter rat running and also have the effect of cutting down the speed of traffic. It could be tied into the old dual carriageway at the Nags Head	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.  Future optioneering or enhancements along the full corridor of the existing A358 to Henlade would then be a matter for Somerset Council as the local highways authority.  From Glebe Lane, a separate cycle track would run, across the A378 Langport Road and along most of Village Road link (north) for use by walkers, cyclists and horse-riders. The track would utilise the existing A358 carriageway that would be redundant because of the scheme. A signal-controlled crossing for use by walkers, cyclists and horse-riders would be provided at the A378 Langport Road. Proposals for walking, cycling and horse-riding as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public rights of way management plan (ES Appendix 2.1 Annex F, Document Reference 6.4).	Yes
367	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Another concern is that the current A358 is planned to be used to direct vehicles travelling from Ilminster direction, to leave the new Expressway at Mattocks Tree Green, if they wish to access the Park and Ride. The Park and Ride needs to be accessed from the Expressway via a new layout of the Nexus 25 roundabout.  This would be a sensible solution for residents of Hatch Beauchamp and surrounding villages to allow safe access to the old A358.  Only in that the scheme proposes to direct traffic from the new A358 to the Park& Ride at this point via Henlade. Part of the object of the exercise is to by-pass Henlade and keep traffic on the new road so directing traffic to the Park& Ride at this point goes against this objective.	National Highways acknowledges the support provided for the Village Road link to Mattock's Tree Green junction.  For the proposed Nexus 25 junction to operate efficiently, there is a need to minimise the amount of right turning traffic from the south on the A358. This will be done by maintaining the existing access to Taunton Gateway Park and Ride from the existing A358 only. Minimising the traffic turning right means that more green time can be dedicated to the A358 mainline movement, reducing delays, congestion, and ensuring no traffic is tempted to rat-run.  Given that the Henlade bypass section of the proposed A358 scheme reduces the number of vehicles travelling on the existing A358 by around 90%, the effects of park and ride traffic from the south travelling through Henlade will be minimal.	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Cannot see why the Park & Ride cannot be accessed from the Nexus round-about. It already is accessed by local traffic and M5 traffic at this point and therefore would seem to be the obvious solution. It would mean a minor adjustment to the entrances. Of course National Highways would have to consult with Somerset Council Council as they are responsible for the site.		
368	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Some traditional inks should be maintained between villages.	National Highways acknowledges the comment. Village Road overbridge provides connectivity across the A358 between Hatch Beauchamp and Ashill with further links to other villages and communities.	N/A
369	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Provision for good, safe routes should always be made available for those not using motorised vehicles allowing access for all; the use of local road networks would be seem very sensible.	Many rural roads including quiet lanes are attractive to walkers, cyclists and horse-riders and the numbers of people can be greater than the numbers of vehicles. A Local Roads Strategy has been developed in liaison with Somerset Council to consider the needs of all users including non-vehicular. Proposals for walking, cycling and horse-riding as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the public rights of way management plan (ES Appendix 2.1 Annex F, Document Reference 6.4).	N/A
370	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	However the question on section 5 directs you to page 26 of the Consultation Booklet. This page further directs you to Chapter 12 of the PEI report. There appears to be no chapter headings or, indeed, page numbers in the Preliminary Environmental Information Report, Non-Technical Summary. There are page numbers listed in the front cover index but no page numbers in the publication and counting the pages does not tie up with the numbers in the index. However back on page 26 of the Consultation Booklet some fine statements are made and it is to be hoped that the local walking, cycling, horse-riding and disabled groups have been fully consulted with and their responses considered.	Consideration of the needs of walkers, cyclists, horse-riders and disabled users has included liaison with a range of user groups. National Highways has met either online or in person with the Ramblers, Taunton Area Cycling Campaign, British Horse Society and South Somerset Bridleways Association. A number of other groups raised comments at the statutory and supplementary consultations and National Highways is responding accordingly.	N/A
371	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	The A303/A358 has been promoted as the second fastest route to the South West from London so there is a strong need to upgrade the M5 junction and the Nexus roundabout to cope with the volume of traffic that will funnel through along the new A358. The current Nexus roundabout, so close to the J25 roundabout, is not ideal and could cause major disruption to the traffic flow. Perhaps a 'through roundabout' would be appropriate at this location so that the A358 traffic from the Ilminster direction could travel direct to J25 rather than having to go round the Nexus roundabout.	National Highways has undertaken operational modelling of M5 junction 25 and the Nexus 25 junction, which confirms that the junctions will operate within their practical capacity. Following statutory consultation, the form of the Nexus 25 junction has been amended to be a signalised crossroads. This will allow the junction operation to be linked to nearby M5 junction 25 and will also allow a pedestrian crossing facility to be incorporated into the junction without negatively impacting the capacity available to vehicles passing through the junction.	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
372	Ruishton and Thornfalcon Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	There also needs to be safe and separate provision made for pedestrians, dog-walkers, cyclists and disabled users, particularly at the M5/P&R/Nexus junctions as it will be heavily used by these categories of people.	A dedicated route for pedestrians and cyclists through M5 junction 25 and the Nexus 25 junction would be maintained as part of the scheme, as per existing. The form of the Nexus 25 junction has been revised following the consultation, to be a signal-controlled crossroads. The signal control would include dedicated crossings for pedestrians and cyclists, to link with the off-carriageway routes already provided around the junctions.	Yes
373	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	In Stoke St Mary Parish we have a fundamental issue with the impact of the current design for the Mattocks Tree Junction and its influence upon traffic on Ash Road.	National Highways acknowledges the concerns raised and has amended the scheme design as detailed in the detailed responses below.	Yes
374	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	<p><b>ASH ROAD</b> We have major concerns regarding traffic electing to exit at the new and very inviting Mattock's Tree Green Junction, heading up Ash Road and through Stoke St Mary to access a number of large schools/colleges and businesses in South Taunton. The current route from the M5 J25 is already very convoluted since SCC closed the Old Ilminster Road access via Blackbrook. Expressway traffic and local traffic needs greater separation. The proposed arrangement of the two roundabouts giving access to the M5 will generate congestion and will cause drivers to look for alternative (rat runs) through the local villages.</p> <p>Indeed, your traffic modelling shown in Figure 9.1 of the Technical Note highlights that greatest traffic impact throughout the whole scheme is on Ash Road and into South Taunton. Despite many requests, we only received the actual traffic modelling figures a few days before the consultation finished, and as such our parishioners will not be aware of this in their responses.</p> <p>The predicted traffic flows highlight a huge increase in daily flows progressing along Ash Road (237%, 129% &amp; 64%) to Stoke St Mary, and still very significant increases through the village accessing South Taunton (59%). These figures demonstrate this new junction promotes a new rat run to access South Taunton, hence our great concern. The road into Stoke St Mary from Ash Road is already extremely narrow and tortuous, with few passing places leading to gridlock, so any additional traffic would have a major impact upon WCH and the existing local traffic. There are over forty horses in seven establishments within the village of Stoke St Mary and more in the rest of the parish. Many people cycle and more walk. During lockdown we saw what was possible when traffic was only generated locally. The community is preparing a traffic strategy for the village which will also be improved by the closure of Greenway Lane and the reduction of traffic through Lower Henlade. All this is dependent on reducing traffic down the Ash Road rat run.</p>	National Highways acknowledges the concern about traffic using alternative routes along Ash Road and Stoke Road. The scheme design has been modified to provide a less direct connection between Ash Road and the Mattock's Tree Green junction. This will reduce the attractiveness of the Ash Road / Stoke Road route as an alternative route between the A358 and southern parts of Taunton.	Yes
375	Stoke St Mary Parish Council	Do you have any other comments you would like	<p><b>ASH ROAD</b> Ash Road should not be connected to the Mattocks Tree Hill Junction to prevent this dramatic increase in traffic.</p>	National Highways does not consider it feasible to disconnect Ash Road from the A358 altogether as access between Ash Road and the A358 needs to be maintained for residents and businesses located along Ash Road. However, the scheme design has been modified	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		to make about our proposals?	Stoke St Mary residents have alternative routes, while West Hatch residents can use Griffin Lane to access the now included Village Road connection to Mattock's Tree Hill. Adopting the Joint Parishes proposal with additional access points to the new A358 near Hatch Beauchamp would help this proposal.	to make the connection from Ash Road to the Mattock's Tree Green junction less direct and therefore less attractive to through traffic.	
376	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	ASH ROAD Other mitigation methods should also be seriously considered, such as re-opening the Old Ilminster Road access via Blackbrook to aid access to South Taunton via J25. We would strongly recommend enlarging your "red lines" to incorporate this short section of Old Ilminster Road at this stage to ensure this option is kept alive.	The possibility of reopening Old Ilminster Road to general traffic has been discussed with Somerset Council.  Such proposal would not be supported by Somerset Council on the basis that the bus gate is an essential component of bus priority measures in the town that would be lost if the road were to be shared with general traffic. The Council approved a Bus Service Improvement Plan in October 2021 (reviewed in October 2022) and loss of the bus gate would be in direct contradiction of it.	No
377	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	ASH ROAD Equally, the "Quiet Lanes Scheme" in Cornwall where through traffic is banned from the narrow country lanes would be an ideal model for Stoke St Mary Parish. (See <a href="https://www.cornwall.gov.uk/council-news/transport-streets-and-waste/more-news-stories/views-sought-on-plans-to-replace-truro-rat-runs-with-walking-and-cycling-network/">https://www.cornwall.gov.uk/council-news/transport-streets-and-waste/more-news-stories/views-sought-on-plans-to-replace-truro-rat-runs-with-walking-and-cycling-network/</a> ). Could a similar model be incorporated as part of the whole scheme?	National Highways has also proposed local road improvements as a result of changes in traffic flows which are considered appropriate to the nature of the local road network and has developed these in conjunction with Somerset Council as the local highway authority. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	No
378	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	ASH ROAD Lastly could the Mattock's Tree Green Junction be redesigned to reduce the "appeal" as a rat run, with a more convoluted and lengthy access via the access road recently added to the Nightingale Farm Units.	National Highways acknowledges the concern about alternative routes along Ash Road and Stoke Road. The scheme design has been modified to provide a less direct connection between Ash Road and the Mattock's Tree Green junction. This will reduce the attractiveness of the Ash Road / Stoke Road route as an alternative route between the A358 and southern parts of Taunton.	Yes
379	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	Traffic management/mitigation measures must be agreed in conjunction with SCC and be ready for implementation on the day the proposed A358 opens. It is unacceptable for National Highways to create a significant problem off the line of their scheme and leave it to Somerset Council to find a solution. We need National Highways to directly ensure budgetary provision within the A358 scheme for SCC to implement a solution, or provision of separate Designated Funds.	National Highways has also proposed local road improvements as a result of changes in traffic flows which are considered appropriate to the nature of the local road network and has developed these in conjunction with Somerset Council as the local highway authority. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).	Yes
380	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	VISUAL IMPACT (Nexus to Lower Henlade) The visual impact of the proposed road will have a significant adverse effect on all the dwellings and footpaths in the hamlet of Haydon, Arundells Farm and the dwellings and footpaths on the road between Henlade and Stoke St. Mary. Bunding, planting, and acoustic fencing will be essential on the south side of the proposed A358, all the way from Nexus to Lower Henlade where the road is on an embankment, to screen the road (head and tail lights and noise pollution) from these dwellings. If street lighting is to be provided on the Nexus roundabout, it should be directed onto the carriageway surface with minimal light spillage and not extend along the new road.	Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers have been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. This includes noise barriers and bunding along the south side of the new A358, either side of Stoke Road. This is reported in the Environmental Statement (ES) (Document Reference 6.2).  Due to the location of the floodplain within this area bunding for the purpose of visual screening is not possible in this location. Details of proposed embedded mitigation are provided with ES Chapter 2 The project (Document Reference 6.2), and presented on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3). This includes a mix of woodland planting, hedgerows with trees, and enhancement of existing hedgerows between properties and the scheme.	N/A
381	Stoke St Mary Parish Council	Do you have any other comments you would like	GENERAL An Expressway that begins at a roundabout notorious for	As part of the scheme design M5 junction 25, the Nexus 25 junction and Southfields roundabout will all be improved. Operational modelling of the junctions indicates that they	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		to make about our proposals?	delays and ends at closely positioned double roundabouts is absurd design.	will operate within their practical capacity. The existing congestion at these junctions indicate that they currently regularly exceed their operational capacity.	
382	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	GENERAL The Henlade bypass is essential, beyond that, better design of access and egress from the M5 and the A303 would achieve 95% of the benefit of the current scheme at half the carbon footprint.	National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
383	Stoke St Mary Parish Council	Do you have any other comments you would like to make about our proposals?	GENERAL Do bear in mind that the very late release of predicted traffic data using Ash Road and through Stoke St Mary is unlikely to be reflected in the views of our parishioners given their lack of awareness, and so this issue in Parish Council submission must be given additional due consideration.	National Highways has taken the feedback about concern of the scheme's impact on Ash Road and Stoke St Mary on board and has amended the scheme design to address this.	Yes
384	West Hatch Parish Council	At Capland, which option would you prefer to provide a connection between local villages in this area? Please tick one choice	See: Para 8. General – and the 'Response from the Community of Parishes'.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
385	West Hatch Parish Council	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	II. National Highways's conclusions on Human Health, Noise and Vibration highlights the mediocrity of the analysis for the scheme as currently designed. North Curry and Stoke St Gregory, villages miles away from the direct impact of the scheme, are the sole identifiable beneficiaries. It is also damning that the Expressway will subject more residential properties to noise and vibration (813) than those that benefit from less (324). For the rest, National Highways can only point to a 'likely slight beneficial effect' on health across the local area, whilst ignoring the adverse impact on communities lying adjacent to the Expressway.	The scheme will include a low noise surface to minimise noise generation in all locations. Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. Where individual residential properties are still predicted to be exposed to noise increases above the thresholds set out in the Noise Insulation Regulations 1975, they may qualify for a package of noise insulation measures (glazing and ventilation) to minimise noise ingress to their property. This is reported in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2).  Taking account of the additional mitigation measures, since the PEI Report was produced, as set out in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2), there are 110 permanent significant adverse effects and 360 permanent significant beneficial effects identified.	N/A
386	West Hatch Parish Council	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	See: Para 8. General – and the 'Response from the Community of Parishes'.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
387	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	I. The congestion on the A358 would be solved by the provision of a Henlade by-pass and proper graded junctions at the Junction25/Nexus and Southfield roundabouts. No evidence has been provided demonstrating the need to dual the A358 East of Mattocks Tree Green. This would save millions of pounds, preserve the rural environment and take proper account of the needs of the local communities.	The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the ES (Document Reference 6.2). Please refer to Chapter 2 of the Consultation Report (Document Reference 5.1) for further information.  National Highways acknowledges the support for a bypass of Henlade, however the section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
388	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	II. The RIS strategy is flawed. Creating an urban motorway channelling more A358 traffic onto the M5, the current single main route to the West Country, will increase the overloading and congestion on the M5, which is already unacceptably compromised. The logic of providing a second up-graded main route to the South West A303/A30 via the Honiton by-pass is irrefutable. As a professional engineering organisation held to ethical standards NH should have made this quite clear to Government and sought redress.	The A358 will be a high quality dual carriageway, not an urban motorway. National Highways has undertaken traffic modelling on the most recent proposed scheme design, which includes the local roads surrounding the proposed A358 scheme. The modelling of the new proposed A358 scheme design suggests that the change in traffic flow on the M5 would be an increase of 2-3% with the proposed A358 scheme in place. This is a very small increase in traffic due to the scheme and is unlikely to have any significant impact on the operation of the M5. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4). The proposed scheme also includes improvements to M5 junction 25 which will accommodate the extra traffic forecast to use the junction as a result of the scheme.	N/A
389	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	VI. During the 2021 consultations ten parishes that lie directly within the scheme developed proposals that would mitigate the adverse impact of the scheme to an ALARP level. The process was complicated by constant changes in scheme design, It is unacceptable that National Highways excluded the Joint Parishes proposals from all statutory consultation material, including DCO preparatory documents like the PEIR.	Section 47 of The Planning Act 2008 places a requirement for an applicant to consult with local authorities on the proposed Statement of Community Consultation and requires local authorities to respond to the applicant within 28 days of receipt of the request. In this instance they were Somerset County Council, South Somerset District Council and Somerset West and Taunton District Council (which were all subsumed into the new unitary authority of Somerset Council in April 2023). This consultation took place between July and August 2021. National Highways has had due regard to the responses received from the local authorities in developing the final published Statement of Community Consultation.  National Highways engaged regularly with local communities, including holding briefings and Community Forum events with parish councils in the run up to consultation period. The consultation period lasted 41 days, which exceeded the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days. National Highways advertised the dates for the consultation period widely in the local press and through continued engagement with local communities and stakeholders, including at Community Forum events, parish council meetings and in Member briefings. This is detailed in the Consultation Report (Document Reference 5.1). That has provided adequate time for people to prepare for the consultation and to provide their responses, including aligning any governance processes needed to accommodate it if necessary.  National Highways informed parishes and local communities of the timing, as far as it was able to based on governance procedures it must follow, during a number of Community Forum events and parish council briefing sessions. During the Community Forum events in March and May 2021, attendees were informed that the consultation would take place in 'Autumn 2021'. National Highways were able to confirm that it would take place in October during the local authority and parish council briefing events in September 2021.	N/A
390	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	VII. The Statutory Consultation exposes serious breaches in the governance of this National Highways scheme. Unequivocally, governance does not permit the building of a 9-mile Expressway, a sub-category of Motorways, to link roundabouts. The proposed design is extravagant in land usage, unnecessarily cutting a great, environmentally damaging, swathe through a rural landscape at an unacceptable cost to the tax-payer. Except for the Henlade by-pass the Expressway gives very little back to the local community, adversely impacting their safety and wellbeing so that commuters and seasonal holiday travellers can speed to, and queue at, a roundabout before joining an already overloaded M5. The Henlade by-pass and redesign of the two roundabouts should be completed before any consideration is given to dualling east of Thornfalcon. In that event, mitigation proposals given by local parishes, as an honest attempt to reconcile the adverse impact of the scheme, should be incorporated. It goes against all principles of governance that Community Mitigation Proposals are dismissed by exploiting compliance criteria	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			within DMRB GD 300, whilst ignoring the non-compliance of National Highways' own scheme proposals. If, in the first instance, the Henlade by-pass and redesign of the roundabouts do not deliver the scheme objectives, governance requires National Highways to redesign the scheme as an All-purpose Trunk Road following CD109 Highways Link design criteria. Incorporating the proposed mitigation, this perfectly adequate specification, will provide a route usable to all travellers, local and distant.		
391	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	<p>CONSULTATION PROCESS</p> <p>I. The PEIR was not available prior to the consultation. It is not possible to review a major document and accompanying data within 6 weeks. A longer consultation period was requested but denied. The consultation date was only published just before the start, contrary to the experience of other consultations which have been given a two month notice period as well as a two month consultation period.</p> <p>II. No meetings with the 12 individual parishes involved were factored into planning the consultation process.</p> <p>III. There were only 3 face to face events, one of which was in a room that was far too small with viewing materials cramped. People had to queue outside and some people left as there was not sufficient parking. Only one event was held outside normal working hours and that event at one end of the route.</p> <p>V. Webinars starting with a slide stating 'The story so far' – are inappropriate and offensive to the hundreds of people whose daily lives and livelihoods will be adversely impacted by the proposed scheme. The facile statement exemplified the apparent disregard NH seems to have for local communities.</p>	<p>Section 47 of The Planning Act 2008 places a requirement for an applicant to consult with local authorities on the proposed Statement of Community Consultation and requires local authorities to respond to the applicant within 28 days of receipt of the request. In this instance they were Somerset County Council, South Somerset District Council and Somerset West and Taunton District Council (which were all subsumed into the new unitary authority of Somerset Council in April 2023). This consultation took place between July and August 2021. National Highways has had due regard to the responses received from the local authorities in developing the final published Statement of Community Consultation.</p> <p>National Highways engaged regularly with local communities, including holding briefings and Community Forum events with parish councils in the run up to consultation period. The consultation period lasted 41 days, which exceeded the minimum requirement for Nationally Significant Infrastructure Projects (NSIPS) which is 28 days. National Highways advertised the dates for the consultation period widely in the local press and through continued engagement with local communities and stakeholders, including at Community Forum events, parish council meetings and in Member briefings. This is detailed in the Consultation Report (Document Reference 5.1). That has provided adequate time for people to prepare for the consultation and to provide their responses, including aligning any governance processes needed to accommodate it if necessary.</p> <p>National Highways informed parishes and local communities of the timing, as far as it was able to based on governance procedures it must follow, during a number of Community Forum events and parish council briefing sessions. During the Community Forum events in March and May 2021, attendees were informed that the consultation would take place in 'Autumn 2021'. National Highways were able to confirm that it would take place in October during the local authority and parish council briefing events in September 2021.</p>	N/A
392	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	<p>VI. The staff at the face to face events were frequently evasive when asked simple questions viz: 'Why is the Southfields roundabout not being fully upgraded?' NH's answer - 'Because it will funnel more traffic down the A358.' This is in total contradiction to the supposed reason for dualling the road. Similarly, when asked to explain why NH thought the environmental damage that full dualling will cause was acceptable, the answer was that we should be looking at what 'nuclear' developments were doing to the environment and not questioning NH.</p>	<p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.</p> <p>As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures</p>	N/A

				we have adopted are described in the Environmental Statement (ES) (Document Reference 6.2).	
393	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	VII. There was no information available on the costs of the project nor details of Cost Benefit analyses and how they were sourced and evaluated.  I. There was no information available on the costs of the project nor details of Cost Benefit analyses and how they were sourced and evaluated.	At the time of the statutory and supplementary consultations work was ongoing to update the economic appraisal to reflect the latest scheme design. The value for money assessment involves quantifying both benefits and costs and these can only be finalised once the scheme design has been frozen following incorporation of design changes based on feedback received from consultation. Both the benefits and the costs have now been updated after full consideration of consultation feedback. Details of the Benefit-to-Cost ratio (BCR) and the scheme costs are given in the ComMA Report (Document Reference 7.4).	N/A
394	West Hatch Parish Council	Please let us know if you have any comments on our proposals for construction, including the proposed phasing.	See: the 'Response from the Community of Parishes'.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
395	West Hatch Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	I. Much of the PEIR relies heavily on aspiration and conditional expectations and there are many statements of doubtful veracity, it consequently lacks credibility as it appears to be selectively supportive of the NH scheme without proper analysis of the regressive effects of the proposals. For a full critique of the PEIR see Hatch Beauchamp Parish Council response to the Consultation.	National Highways acknowledges comments made in relation to the PEI Report.	N/A
396	West Hatch Parish Council	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report.	IV. Since the scheme inception in 2014, the environmental issue of climate change has risen to prominence. The 2014 focus on building big is out of step with current thinking of building small, the phasing out of petrol and diesel cars, and encouraging seasonal travellers to alternatives like rail; all of these have been ignored in the PEIR.	National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.  National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the PEI Report considered impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). This assessment has also been updated within ES Chapter 14 (Document Reference 6.2), which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 and concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.  National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.  An outline Carbon Management Plan is provided as Annex K of the Environmental Management Plan (Environmental Statement Appendix 2.1, Document Reference 6.4).	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
397	West Hatch Parish Council	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? To summarise, they would allow the existing road to be converted to a local route, connecting to the new Village Road bridge and providing connectivity between Ashill and Hatch Beauchamp, keeping access to properties along this route.	See: Para 8. General – and the 'Response from the Community of Parishes'.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
398	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	I. As explained in Figure 10-1, of the A358 Technical Traffic Note, traffic from Staple Fitzpaine, West Hatch, Curland, New Town and Bickenhall areas will use this new Bickenhall Lane bridge enroute. to and from Mattock's Tree Green junction. The National Highways analysis of the impact of this traffic is wrong, as it made a basic arithmetical error in its summations. The consequence of this bridge over the Expressway will be 600-700 more vehicles a day passing along the narrow Lane and the centre of Hatch Beauchamp, passing the village green, children's play park and a large care home. As the Google Streetscene photographs show, the lane is narrow and totally unsuitable for this traffic, which will include large milk lorries, delivery lorries, large farm machinery, besides normal residential vehicles. It is for these reasons that the Community Mitigation Proposals included a requirement for direct access to the new A358 south of Hatch Beauchamp. Moreover, without this access additional traffic will also travel along Village Road South enroute to and from Mattock's Tree Green junction, adding to the traffic from Bickenhall Lane. In all some 800-900 extra vehicles movements will occur through Hatch Beauchamp centre and Village Road North. To mitigate this adverse impact, if the road is to be dualled, two alternative proposals have been submitted to National Highways. (3 images provided)	<p>National Highways has made some changes to the proposals for the new bridge at Bickenhall Lane. The bridge would be narrower and moved approximately 165m south. This places it further away from Bickenhall Wood ancient woodland, reducing impacts on vegetation and bat species.</p> <p>Additionally, feedback from the 2021 statutory consultation identified concerns with the suitability of Bickenhall Lane for public vehicular traffic. In response, National Highways are now proposing to limit access to this bridge to walkers, cyclists, horse-riders and carriage-drivers, which can also be used by local landowners for farm access.</p> <p>As a result of this change, there would be no public motorised traffic using the bridge and the route via Hatch Beauchamp to access the Mattock's Tree Green junction. To access the junction, traffic would use the route via Cold Road and Higher West Hatch Lane. This means that there will be no through traffic using Bickenhall Lane with the proposed A358 scheme in place. No slip road accesses to the A358 on Bickenhall Lane are included in the proposed A358 design.</p> <p>For the A358 to become a high quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed, complying with DMRB CD 122. As such, direct local road accesses have been removed and access to Mattock's Tree Green junction and Ashill junction are provided.</p> <p>The scheme has been designed to the standards set out in GD300. As such, any new intermediate junctions that are constructed as part of the scheme would need to take the form of a full grade-separated junction similar to the one near Ashill or Mattock's Tree Green. Factors such as the cost, value for money and environmental impacts of this additional junction also need to be considered. A review of the amount of traffic that would be likely to use an additional junction near Hatch Green would not justify the costs or environmental impacts of it.</p> <p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The traffic modelling undertaken shows that there will be very small changes on most local roads, although with some seeing very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>An assessment of the change in traffic flows on local roads has been carried out between forecast scenarios with the scheme and without the scheme in consultation with Somerset Council, and the scheme includes mitigation measures on some of the local road network where considered appropriate based on traffic flows. This review has also looked at</p>	No

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>infrastructure concerns flagged through the consultation process to incorporate upgrades targeted at increasing resilience in the case of flooding or similar problems.</p> <p>At Hatch Beauchamp the traffic flows are predicted to change by approximately 250 vehicles per day two-way, or 30 vehicles per hour during peak periods. This is the equivalent of one vehicle every 2 minutes during the peaks, which is unlikely to be a noticeable difference from the existing situation. The majority of these trips are expected to come from Hatch Beauchamp and Hatch Green, having had their routes changed slightly by the scheme, and therefore are people local to the villages being affected.</p> <p>The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).</p>	
399	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	<p>a. The first assumed the Bickenhall overbridge was not present (May '21). As Bickenhall Lane is a busy local route favoured by farm traffic and lorries, the lane needs to be kept open by extending the planned service road from Ashill to Hatch Beauchamp overbridge to Bickenhall Lane. (2 diagrams provided) A taper merge slip road access should be provided onto the westbound carriageway at the western end of this extended service road. Offset savings will be made by not requiring suitability assessments of the diversionary routes proposed and the improvements that would be required on these routes to make them acceptable. An example of this type of junction is at the A356/Ringwell Hill/A303 connection at Bower Hinton. National Highways objects to this proposal on cost grounds, the interest of other stakeholders and the impact on Bickenhall Wood. Although National Highways insist on calling the wood ancient, it is in fact a replanted ancient wood (Figure 7.1, PEIR). Furthermore, as slow-moving traffic will be permitted on the dual carriageway the need for a bridge to accommodate all traffic is removed. Alternative arrangements for walkers, cyclists and horse riders (WCH) are available utilising Griffin Lane, the Hatch Beauchamp overbridge and the proposed extended service road.</p>	<p>Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.</p> <p>Bickenhall Lane is a popular cycle route and the scheme would promote the lane for use by walkers and horse-riders as well. Fivehead River underpass would not be suitable for cyclists and horse-riders due to inadequate headroom. Removal of Bickenhall Lane overbridge from the scheme would lead to stopping-up of bridleway T 14/8, subjecting users to lengthy detours including for access to the Neroche Herepath.</p>	Yes
400	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse-riders and disabled users?	<p>c. In both the above 2 proposals from NH, the lack of connections onto and off the A358 in this middle section between Mattocks Tree Green and Ashill means that increased traffic will use the narrow rural lanes parallel to the A358. Additional north facing only on/off access is required to address the significant traffic to and from J25 from the western rural areas cut off by the current design as this is the only safe access road capable of dealing with heavy vehicles and providing good visibility with very tight slow bends that make it safe for WCH. However, no such proposals and no acceptable counter arguments have been given by NH.</p>	<p>Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. The addition of these slip roads would present poor value for money and they are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.</p> <p>Extended service road and additional slip roads would impact biodiversity as loss of hedgerow, individual trees and associated field margin habitats cause significant fragmentation of the hedgerow network that is utilised by a range of protected species including hazel dormice, bats and reptiles.</p>	No
401	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	<p>l. It is essential, as it will provide access from South of the A358 (West Hatch/Stoke St Mary/Thurlbear etc) to Creech St Michael, the A38 and Wellington.</p>	<p>National Highways acknowledges the range of views expressed, including those received in support of the project.</p>	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
402	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	i. Pursuance of an 'Expressway Corridor' vision has distorted the thinking behind the current A358 improvement. National Highways attempts to obscure this failure by not including the congestion at the roundabouts in the issues needed to be resolved nor within the road typology (Paragraph 1.2.9). Rather National Highways transfers blame for congestion onto the link between the roundabouts. Contrary to what National Highways implies the current A358 and surrounding area has an accident rate lower than the national averages (Paragraph 12.6.69), and east of Thornfalcon there is no evidence of traffic joining the A358 being the cause of congestion. The rationale for building an Expressway to improve safety and reduce journey time across the scheme lacks evidence.	<p>A comparison of the accident rate of the existing road against a national average accident rate is documented in the ComMA Report (Document Reference 7.4). This indicates that the existing road is less safe than the national average expected of a strategic A road of the existing standard. Furthermore, dual carriageways are significantly safer than single carriageway roads as they reduce the number of incidents related to dangerous overtaking and junction turning movements. The upgrade to dual carriageway will therefore bring a step change in safety along the A358 corridor.</p> <p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three-lane approach from the A303 (East) approach, a three-lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory carriageway. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicate that it will operate within its practical capacity in the design year (2046) even during peak hours.</p> <p>Somerset County Council (as were) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes. As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity.</p> <p>The form of the Nexus 25 junction has been amended to be a signalised crossroads. This will allow the junction operation to be linked to nearby M5 junction 25 and will also allow a pedestrian crossing facility to be incorporated into the junction without negatively impacting the capacity available to vehicles at the junction.</p>	N/A
403	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	ii. Although the PEIR never mentions Expressways it is designed in part to GD 300 standards, the title of which is General Principles & Scheme Governance, Requirements for new and upgraded trunk roads (Expressways). GD 300 is within a library named Design Manual for Road and Bridges (DMRB) and as the title suggests provides governance over National Highways design. GD 300 stipulates that the whole standard must be applied within an Expressway scheme. A key component of an Expressway is that all junctions are required to be at full-grade separation (Paragraph E/5.2), but the scheme fails this requirement as the link terminates at at-grade roundabouts, one even has traffic lights. In this situation GD 300 governance directs National Highways to categorise the scheme as an All-Purpose Trunk Road (Paragraph E/5.1) built according to CD 109 standards (Highway link design) with all other design requirements re-evaluated (Paragraph E/1.4). This governance related directive does not permit a departure from standards (Table E/F.31) and is in place to ensure that schemes are efficient and provide value for money, a mandate placed upon National Highways by its Licence (Paragraph 4.2d). If governance had been followed the scheme would have followed a simpler, cheaper design, evidenced within the 2019 Scheme Assessment Report (SAR) conclusion that the route could be simplified if Expressway standards were not applied (Paragraph 7.1.8, SAR).	<p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.</p> <p>CD 109 forms part of the DMRB and is being used by National Highways as part of the design of the scheme.</p>	N/A

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
404	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road?	V. National Highways is proposing to build an Expressway, a sub categorisation of a Motorway, yet does not use the name itself in any documentation presented at the Statutory Consultation. National Highways only refers to GD 300 standards once, in Table 3.1 to record that the imposition of GD 300 standards is the reason all current at-grade junctions along the A358 are to be closed. The fly-through video of the scheme has shocked local people by the extraordinary complexity of the dual carriageway and junctions, the excessive scale of the central reserve, the extravagance of the boundary and drainage system and the overall urbanisation of what is a country road. The build specification of an Expressway has clearly led to a large inflation of the cost of the scheme. Compounded by the Stage 2 decision to abandon the free-flowing grade separated junction with the M5 the Benefit-to-Cost Ratio is now at the very low level of 1.2 (Paragraph 7.1.3, A358 Technical Traffic Note). National Highways' insistence in proposing a high cost Expressway is irrational.	The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.  National Highways are adopting the latest design standards for the A358 Taunton to Southfields scheme which includes GD 300. This is part of the Design Manual for Roads and Bridges (DMRB) and includes requirements and advice for new and upgraded all-purpose trunk roads, covering four different levels of provision. Specifically, the scheme is being designed as a Level 2 dual carriageway which means it will have All-Purpose Trunk Road designation and will be accessible to agricultural vehicles.	N/A
405	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses?	I. The community of local parishes recommended this connection and it is strongly supported. This road is already and will become even more a route for cyclists. WHPC asks 2 important adaptations of this section. Firstly, there be a strong enforceable speed limit of 50mph as it passes though Hatch Beauchamp and until it reaches the old A358. Secondly that a wide separate pathway for pedestrian and cyclists be established on this section of the Village Road. This section of Village Road has already been the site of accidents and many more near misses.	Village Road is already subject to a 30mph speed restriction through Hatch Beauchamp and enforcement is the responsibility of the police. The restriction applies from north-west of the Village Road/Frost Street/Station Road crossroads to south of Hatch Green Garage. The redundant A358 carriageway alongside Village Road link (north) would be repurposed as a multi-user track. Additional measures beyond the scheme boundary are the responsibility of Somerset Council as local highway authority.	N/A
406	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses?	I. East of the Mattock's Tree Green junction the dual carriageway should merge with the existing A358 obviating the need to dual the road towards Southfield.	Despite the route being such an important connection, the existing A358 is predominantly single carriageway. At times like rush hour, weekends, and bank holidays it carries many more vehicles than it was designed for. By improving the route between M5 junction 25 and Southfields roundabout, we would make faster and safer connections with more reliable journey times, improve connectivity, reduce congestion at peak travel times and reduce traffic through local towns and villages among other benefits.  The section between Thornfalcon and Southfields is also required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
407	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses?	II. In the event that the road is fully dualled it should be built as a D2AP road, with governing DMRB documents CD 109, CD 127, CD 122 and CD 116.	The A358 scheme is a dual carriageway and will have all-purpose trunk designation. National Highways are adopting the latest design standards for the A358 scheme as part of the DMRB and this includes CD 109, CD 127, CD 122 and CD 116.	N/A
408	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new connection linking Village	Several West Hatch farmers have land on either side of the A358, the proposed dualling means that access across the A358 from Village Road on the north side to and from West Hatch Lane is no longer available to the	Following feedback from the 2021 Statutory Consultation, we have identified an opportunity to improve access to Mattock's Tree Green junction to and from West Hatch. We have revised our proposals to include a new road that would run alongside the A358. This would connect West Hatch Lane to Mattock's Tree Green junction via the proposed new link road	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses?	farmers. The most satisfactory mitigation of this would be to re-join West Hatch Lane across the A358 with a local farmers bridge or underpass. An alternative but less satisfactory mitigation would be to extend the north end of West Hatch Lane to the west along the south side of the A358 and join into the old railway track and the area of the Progressive school. This should be a hard-core "forestry type" agricultural access track, as it will only be used by farm vehicles. WHPC strongly urges NH to consider these mitigation proposals to allow for the continued viability of the rural businesses.	to the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm Units.	
409	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm Units.	I. West Hatch recommended this connection and it is strongly supported by the Community of Parishes.	National Highways acknowledges the range of views expressed, including those received in support of the project.	N/A
410	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358?	See: Para 8. General – and the 'Response from the Community of Parishes'.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
411	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358?	See: Para 8. General – and the 'Response from the Community of Parishes'.		N/A
412	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road?	See: Para 8. General.  As proposed this junction is completely over designed and environmentally unacceptable for the degree of traffic it will carry. The roundabout at Mattocks Tree Green on the Wrantage side of the new line of the A358 should be made oval with a single access point to the old A358 dual Carriageway allowing the second carriageway to be allocated to WCH. This concept was proposed at the informal consultation forum held at Taunton Rugby Club which was agreed by all parties present (including National Highways) as superior to the design presented for the formal consultation. We consider the only reasons that the design for formal consultation was not modified to the oval was time and cost cutting by National	The proposed junction at Mattock's Tree Green comprises of a 'dumbbell' arrangement which is a standard all movements grade-separated junction type in accordance with the Design Manual for Roads and Bridges (DMRB), which are the design standards for use on the strategic road network.  National Highways acknowledges the concern about alternative routes along Ash Road and Stoke Road. The scheme design has been modified to provide a less direct connection between Ash Road and the Mattock's Tree Green junction. This will reduce the attractiveness of the Ash Road / Stoke Road route as an alternative route between the A358 and southern parts of Taunton.	Yes

Row ID	Consultee	Survey question (if relevant)	Matters raised in response to 2021 statutory consultation Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Highways. The roundabout on the Stoke St Mary side of the Mattocks Tree Green junction is unnecessary as over 95 % of traffic will be transiting from the A378 to M5 J25. An environmentally superior solution which will also dissuade vehicle use of Ash Lane which is a high usage WCH route beyond Lime Kiln Cottage is needed. Slewing the bridge and having 2 T junctions for the A358 off Ramp and Special school road will suffice. Ash Lane should be accessed by a T junction off of the special school road. This proposal is less environmentally invasive and with Ash Lane access being 3.5m wide max will result in Ash Lane being unappealing as a "rat run" while providing local access for agriculture and Cycle access for the highly popular Ash Lane to Glebe Cottages route.		
413	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road?	The spur off the northern roundabout to Henlade is unwarranted and traffic should flow via the existing Thornfalcon Junction modified to provide the necessary connections. This would discourage a rat-run developing through Henlade and Creech St Michael. It would also reduce costs and reduce the impact the junction will have on the local landscape, including light pollution, particularly from the west. Parishes have similar concerns about a rat-run developing through Stoke St Mary, so any final design must mitigate against this outcome by restricting traffic along Ash Road (2 diagrams provided)	As the northern roundabout forms part of the Mattock's Tree Green junction, the function of which is to provide access to and from the A358 dual carriageway, there needs to be a good connection to the local road network and the slip roads at this location. The A358 will encourage traffic between the A358 and areas such as Monkton Heathfield to stay on the dual carriageway and use the route via M5 junction 25 instead of exiting or joining the dual carriageway at the Mattock's Tree Green junction.  National Highways acknowledges the concern about alternative routes along Ash Road and Stoke Road. The scheme design has been modified to provide a less direct connection between Ash Road and the Mattock's Tree Green junction. This will reduce the attractiveness of the Ash Road / Stoke Road route as an alternative route between the A358 and southern parts of Taunton.	Yes
414	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout?	I. Parishes neighbouring Southfields have used their extensive experience of using the roundabout to review National Highways' proposals regarding this section of the scheme. It needs to be repeated that to comply with GD 300 the connection between the A358 (West) and the A303 (East) should be via a free flowing full-grade separated junction. Although National Highways states this could be in a future RIS programme, the prospects of it happening in the operational life of the A358 scheme is very low.	Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.  The section of the A303 between Southfields roundabout and South Petherton is a wide single 2+1 carriageway; that is a single carriageway with 2 lanes in one direction and 1 lane in the other direction. As the A358 scheme is a dual carriageway, any free flow grade separation of Southfields roundabout would require a transition to be made between the dual carriageway and the wide single 2+1 carriageway. For such a transition to be made safely this would require significant works along the A303 and would increase the overall cost of the scheme and the scheme extents. Under the current scheme proposals, Southfields roundabout provides an appropriate connection point between these two classes of road and improvement works are proposed to the roundabout to ensure it operates satisfactorily in the proposed scheme design year (15 years after open for traffic).	No
415	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout?	The graphic below shows a 2007 Highways Agency design for Southfields roundabout. It is truly disappointing that a free- flowing grade separated junction was included in that scheme proposal but not in the 2021 proposal. National Highways thinking is going backwards. (Image provided)	Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment	N/A

				Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.	
416	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout?	The fundamental deficiencies of the current National Highways proposals for the roundabout are that they will: <ul style="list-style-type: none"> <li>• Create an unsafe roundabout configuration;</li> <li>• Exacerbate the already significant congestion on the 5 approach roads;</li> <li>• Fail to separate local traffic from long distance vehicles at this key change of direction for traffic heading between the South West and the South East.</li> </ul>	National Highways has undertaken operational modelling of all junctions along the A358 corridor, including the upgraded Southfields roundabout. These confirm that all junctions along the A358 will operate within their practical capacity. As part of this process forecast queue lengths at all junctions have also been reviewed to ensure that there are no operational or safety concerns. The new interventions at the roundabout, such as the segregated left turn lane, have been designed in accordance with DMRB standards to ensure the design is safe and provides the capacity to cater for forecast traffic demand. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).	N/A
417	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for Southfields roundabout?	Instead of the limited current proposals, all the following design changes to the roundabout are essential. <p>A358 (West) traffic approaching the roundabout</p> <p>As a strategic route a high proportion of the traffic heading towards Southfields roundabout from this direction would want to use the proposed segregated left turn lane to head east onto the A303 Ilminster bypass. Considering the speed reduction and consequent reduced traffic flow caused by the acuteness of the segregated lane curve at the roundabout, the following measures are needed to alleviate tailbacks on the dual carriageway:</p> <ul style="list-style-type: none"> <li>• The addition of a significant length of auxiliary lane (similar to that shown in CD 122 Figure 3.30b Layout A option 2 - Single Lane auxiliary diverge) rather than the taper diverge currently proposed;</li> <li>• The introduction of speed reduction measures for traffic approaching both the segregated left turn lane and the A358 approach to the roundabout;</li> <li>• The introduction of real-time congestion warning signage.</li> </ul>	The layout of the segregated left turn lane has been designed in accordance with appropriate standards within DMRB and traffic modelling of Southfields roundabout shows that still operates satisfactorily in the scheme design 15 years after scheme opening. National Highways therefore does not consider there to be a need to introduce an auxiliary lane and diverge from the A358 earlier than proposed.	N/A
418	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for the Ashill junction?	See: Para 8. General – and the ‘Response from the Community of Parishes’.	National Highways acknowledges support for comments made by the Community of Parishes, for detailed responses to matters raised see the relevant section of this table.	N/A
419	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358?	See: Para 8. General – and the ‘Response from the Community of Parishes’.		N/A
420	West Hatch Parish Council	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse-riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from	See: Para 8. General – and the ‘Response from the Community of Parishes’.		N/A

		Henlade to Southfields roundabout?			
421	West Hatch Parish Council	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout?	<p>See Para 8. General.</p> <p>The 1a) proposal contradicts The Preliminary Environmental Information Report (PEIR) which states:</p> <p>1.2.2. The programme of improvements, as set out in the UK government's Road Investment Strategy (RIS) made a commitment to "...upgrade all remaining sections of the A303 between the M3 and the A358 to dual carriageway standard, together with creating a dual carriageway link from M5 at Taunton to the A303...".</p> <p>c1.2.6. This proposed scheme proposes to upgrade the A358 to high-quality dual carriageway between Southfields roundabout on the A303 and the M5 junction 25 at Taunton to address the traffic issues and long delays currently experienced along the route.</p> <p>The proposed scheme terminates at both ends of the link at roundabouts, which are the sources of congestion. Consequently, the scheme fails the RIS 1 objective of building an 'Expressway Corridor' from the M3 to Exeter and beyond. These roundabout junctions onto the M5 and A303 should be re-evaluated and upgraded.</p>	<p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first road investment strategy (RIS1) intention to create a new Expressway corridor into the region but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions. The DMRB covers a suite of different standards that are used for the design of motorway and all-purpose trunk road schemes. As with any major highways scheme, there are both scheme specific objectives and scheme specific constraints that must be considered alongside the requirements and advice included within DMRB. As part of the work undertaken during early project stages and announced in June 2019 as the preferred route, it was decided that the scheme was to run between M5 J25/Nexus 25 and Southfields roundabout.</p> <p>Somerset County Council (now Somerset Council) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes. As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>National Highways has undertaken operational modelling that demonstrates that Southfields roundabout and M5 junction 25 will operate within its practical capacity.</p> <p>The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4).</p>	No
422	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	<p>• West Hatch believes that the proposed National Highways' Scheme to dual the entire length of the A358 without first completing the Henlade by-pass and proper graded junctions at the Junction25/Nexus and Southfield roundabouts, thus testing the obvious solution to the A358 congestion problem, is unacceptable. Completing the by-pass and end junctions first would save millions of pounds, preserve the rural environment and take proper account of the needs of the local communities.</p>	<p>The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the ES (Document Reference 6.2). Please refer to Chapter 2 of the Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges support for the scheme excluding the section between Thornfalcon and Southfields. However, that section is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	No

423	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	<ul style="list-style-type: none"> <li>• This response to the consultation deals with issues directly affecting West Hatch Parish, specifically Questionnaire Sections 1, 2, 3a, 4d, 7 and 8.</li> <li>• The answers to the questions at Sections 1, 2, 3a, 4d and 7 are set in the context of the General comments at Section 8 which should be read as a preamble to the consultation response.</li> </ul>	National Highways acknowledges the clarity provided by the parish council regarding its approach to responding to consultation.	N/A
424	West Hatch Parish Council	Do you have any other comments you would like to make about our proposals?	<ul style="list-style-type: none"> <li>• West Hatch is fully supportive of the 'Response from the Community of Parishes' in the event of full dualling, but takes exception to National Highways equivocation in failing to accept all the Joint Parish proposals.</li> </ul>	National Highways acknowledges the parish council's support for the Community of Parishes consultation comments and proposals. See responses to each matter raised by the Community of Parishes in this table.	N/A

**Table 5.2C Summary of the matters raised by section 42(1)(b) local authorities in response to the 2021 statutory consultation and the National Highways response**

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
1	Bath and North East Somerset Council		No comment	National Highways acknowledges the response provided.	N/A
2	Mid Devon District Council		Thank you for consulting us on the above scheme. Mid Devon support the scheme and welcome the benefits that the scheme will bring.	National Highways acknowledges the general support provided for design proposals.	N/A
3	Mid Devon District Council		We have read through the EIA that is currently listed on your website and would have only the following observations to make:  As you will be aware, the Mid Devon District covers an extensive area including part of the Blackdown Hills on the edge of the eastern part of the district. It is noted that the EIA already extensively covers the landscape impact associated with this asset and Mid Devon would respectfully ask that the policies of the Local Plan associated with this area are also taken into consideration to ensure its full protection.	Relevant national policy, local policy, and supplementary and further guidance has been considered in relation to the landscape and visual impacts and informing proposed mitigation measures in relation to the scheme, a summary of relevant aspects is provided within Environmental Statement (ES) Appendix 7.1 LVIA Policy and Guidance (Document Reference 6.4), this includes the Blackdown Hills AONB 2019 – 2024 Management Plan in addition to engagement with the Blackdown Hills AONB management team. Whilst Mid Devon Local Plan has not been taken into consideration in the assessment of the scheme (as it sits outside the extent of the landscape and visual study area), it is considered that the Blackdown Hills have been considered throughout the assessment and ensured protection.	N/A
4	Mid Devon District Council		Unless not considered necessary by the determining body, it is considered that the EIA could provide further scoping in regards to flood; archaeology and trees.	Please refer to the following Environmental Statement (ES) (Document Reference 6.2) chapters for an assessment of effects upon flooding, archaeology and trees: <ul style="list-style-type: none"> <li>• Chapter 6 Cultural heritage</li> <li>• Chapter 7 Landscape and visual effects</li> <li>• Chapter 8 Biodiversity</li> <li>• Chapter 13 Road drainage and the water environment (which includes a Flood Risk Assessment presented as ES Appendix 13.1, Document Reference 6.4)</li> </ul>	N/A
5	Mid Devon District Council		As you will no doubt be aware, the South West continue to face a rising challenge of concerns over rising nitrates and phosphates levels which is causing considerable concern and disruption to any current and future builds. This needs to be taken into account as part of any assessment of the proposed development and the impact this can have on the surrounding area.	A sustainable drainage design has been developed for the scheme. This has been informed by a detailed assessment of the potential impact of highway related runoff (using National Highways Water Risk Assessment (HEWRAT) tool) to ensure that an appropriate sequence of water quality treatment is in place to tackle the pollutants generated by the highway network (metals and hydrocarbons). In addition, embedded mitigation measures have been included for specific watercourses providing watercourse channels with a more natural plan form and cross sections which enhance aquatic vegetation and have been known to buffer the effects of high nutrient loading.  National Highways are aware of the Biodiversity Emergency issued by Somerset County Council (now Somerset Council) following advice issued by Natural England that the Somerset Levels and Moors SPA and Ramsar site is in unfavourable conditions primarily due to phosphate levels in surface water. In response, Somerset Council are considering phosphate emissions from developments given within planning applications, primarily developments such as residential, agricultural, and commercial developments. Road developments are not considered significant sources of phosphates. However, we have considered the potential impacts of phosphates from the scheme on designated sites and have reported the	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				results (no significant effects) of this assessment in the Habitats Regulations Assessment – Screening and Statement to Inform Appropriate Assessment (Document Reference 6.5).	
6	Mid Devon District Council		The Local Planning Authority of Mid Devon supports the development, subject to the above.	National Highways acknowledges the general support provided for design proposals.	N/A
7	Somerset West and Taunton	General comments on the new road, its design and the PEIR - Introduction	General comments on the new road, its design and the PEIR - Introduction  Although the subject areas of the PEIR covers the complete gamut of environmental considerations, Somerset West and Taunton Council has concentrated its comments and reviews only on those areas for which it has legal responsibility. Other areas of environmental concern and the road design in general, are matters that other interested agencies will need to comment upon, as they are within their jurisdiction and control. This does not mean though, that the Council has no interest in these areas, nor that it hasn't discussed and consulted on these areas. It is however considered appropriate in a consultation process this wide ranging, to leave specialist subject matters up to other interested parties where they have the legal and defined duty of responsibility.	National Highways acknowledges the legal roles and responsibilities of the Local Planning Authority and their relevant topic areas. These have been set out in the Statement of Common Ground (SoCG) with Somerset Council (see Statement of Commonality, Document Reference 7.3).	N/A
8	Somerset West and Taunton	General comments on the new road, its design and the PEIR - Links to Nexus 25	General comments on the new road, its design and the PEIR - Links to Nexus 25  Finally, it is important that the Nexus 25 proposals are not impeded by the ongoing works because it is a key business park that needs to be developed. It may also be worthwhile discussing with the Nexus 25 owners about temporary paid use of the site, for example for storage, on a 'meanwhile' basis, in order to generate some income for Nexus 25 whilst the works are ongoing. This would only be possible however, if the owners are interested in discussions.	National Highways are actively engaging with the developer for the Nexus 25 site and are sharing information as the scheme design evolves. Our operational model of M5 junction 25 and the Nexus 25 junction confirms that the junction will operate within capacity once the scheme is open to traffic.	N/A
9	Somerset West and Taunton	General comments on the new road, its design and the PEIR - Introduction	General comments on the new road, its design and the PEIR - Introduction  In considering the information supplied by National Highways, the Council has had regards to the Preliminary Environmental Information Report (PEIR), which will be the basis of a future Environmental Statement, as well as the maps and technical drawings that accompany the proposal. This information has been considered primarily through use of the 'virtual exhibition' and on-line information, which the Council found very helpful. As a general comment, the point must be made that many Council Officers considering the on-line information, did have difficulty in finding the figures and appendices that formed an integral part of National Highways case. Perhaps as a guide to future such exercises, you may wish to make these documents easier to locate and more readily available. The Council's comments in this document have also been informed by participation in the 'face-to-face' meetings and Fora that have been held during the consultation period. These have been both useful and helpful and have added to the Council's understanding of what is being proposed at this stage.	National Highways welcomes comments raised by Somerset West and Taunton Council (as was) and have continued to engage throughout the design process including at the consultation events. Details of engagement are set out in the Statement of Common Ground (SoCG) with Somerset Council (see Statement of Commonality, Document Reference 7.3)	N/A
10	Somerset West and Taunton	General comments on the new road, its design and the PEIR – General	General comments on the new road, its design and the PEIR – General Strategic Overview  The Council would welcome further engagement with National Highways and Somerset County Council to ensure a coordinated response to the Climate Emergency and also to ensure that the	National Highways would welcome further engagement with all councils affected by this road scheme and are continuing to engage in relation to climate aspects of the scheme through working groups and the development of Statements of Common Ground. Details of engagement are set out in the	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Strategic Overview	Strategic Road Network provides the infrastructure required to serve the needs of Taunton beyond the current Local Plan period.	Statement of Common Ground (SoCG) with Somerset Council (see Statement of Commonality, Document Reference 7.3)	
11	Somerset West and Taunton	General comments on the new road, its design and the PEIR – General Strategic Overview	<p>General comments on the new road, its design and the PEIR – General Strategic Overview</p> <p>The scheme is very much welcomed by the Council, as it should speed up access to Somerset and particularly Taunton as the County town. It will also enhance connectivity from the South East to the South West and London, providing this additional arterial route into Somerset. This is particularly important as it is an alternative to the M4/M5 interchange and corridor which is frequently congested, especially during the summer months and there are few alternative routes to avoid this congestion. Many of the alternative roads alongside the M5 between Taunton and Bristol are single carriageway and themselves clog up the local villages and local traffic, as they run parallel to the M5 going North/South.</p>	National Highways welcomes the support for the principle of the scheme's route.	N/A
12	Somerset West and Taunton	General comments on the new road, its design and the PEIR – Introduction	<p>General comments on the new road, its design and the PEIR – Introduction</p> <p>This document is the formal response of Somerset West and Taunton Council to the Public Consultation exercise made by National Highways on their proposal to improve and dual the A358 between the Southfields Roundabout in Ilminster and junction 25 of the M5 motorway.</p>	National Highways welcomes the comments from Somerset West and Taunton Council (as was) in relation to the scheme as presented at statutory consultation and note that these have been informed also by face to face meetings held with National Highways. Concerns raised in relation to accessibility of materials on the virtual consultation platform are acknowledged and views taken into account when planning for the supplementary consultation to ensure key documents could be easy to locate.	N/A
13	Somerset West and Taunton	General comments on the new road, its design and the PEIR – General Strategic Overview	<p>General comments on the new road, its design and the PEIR – General Strategic Overview</p> <p>Since the previous consultations in 2017 and 2018, Somerset West and Taunton Council has declared a Climate Emergency (February 2019) and an Ecological Emergency (November 2020). As part of this, the Council has</p> <ul style="list-style-type: none"> <li>• adopted the Somerset Climate Emergency Strategy;</li> <li>• approved our own Carbon Neutrality and Climate Resilience Action Plan; and</li> <li>• is now working on our response to the Ecological Emergency.</li> </ul> <p>It is the Council's view that the scheme does not adequately demonstrate how it is responding to the climate emergency and the Climate Change Act and further consideration should be given to opportunities to reduce, mitigate and offset emissions; as well as deliver a fast and direct strategic cycle route.</p>	<p>National Highways acknowledge concern on the effect of the scheme on climate change. ES Chapter 14 Climate (Document Reference 6.2) has been undertaken in accordance with DMRB LA114 Climate, which is the nationally accepted approach to assessing climate change effects arising from road projects.</p> <p>ES Chapter 14 Climate (Document Reference 6.2) contains an assessment of the impacts of the scheme and outlines how the scheme will reduce, mitigate and offset emissions. The climate assessment considered impacts over a 60 year period and compared emissions against the UK 4<sup>th</sup> Carbon Budget (construction emissions) and the 5<sup>th</sup> and 6<sup>th</sup> Carbon Budgets (for operation). In all cases the emissions calculated demonstrated no impact on the ability of the UK government to meet these carbon budgets, and no significant effect on climate.</p> <p>The proposed scheme includes a number of elements that either ensure continued access for walking, cycling and horse-riding or bring improvements in terms of current accessibility and severance, as described in ES Chapter 12 Population and human health (Document Reference 6.2).</p>	N/A
14	Somerset West and Taunton	General comments on the new road, its design and the PEIR – General Strategic Overview	<p>General comments on the new road, its design and the PEIR – General Strategic Overview</p> <p>Somerset West and Taunton Council continues to support improvements to the A358 between Taunton and Southfields. The Council's existing statutory planning policy, Taunton Deane Core Strategy Policy SP2 (Realising the Vision for Taunton), supports the provision of: "...a Henlade Bypass, traffic calming and improved junctions as part of A303/A358 improvement package..." as part of the infrastructure provision which would help the town to realise its potential.</p>	National Highways welcomes the support for the vision of the scheme as expressed by Somerset West and Taunton Council (as was). This is reflected as a matter agreed within the Statement of Common Ground with Somerset Council (see Statement of Commonality, Document Reference 7.3).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
15	Somerset West and Taunton	General comments on the new road, its design and the PEIR – General Strategic Overview	<p>General comments on the new road, its design and the PEIR – General Strategic Overview</p> <p>The economic benefit for the wider south west peninsula remains well established and the Council continues to welcome the fact that National Highways is bringing forward plans for improvements following Government's announcements in 2014. The improvement of the A358 should provide important improvements to the accessibility of Taunton as a high quality multifunctional sub-regional service centre and thereby further enhance its attractiveness and success.</p>	National Highways welcomes the support for the principle of the scheme's route.	N/A
16	Somerset West and Taunton	General comments on the new road, its design and the PEIR – General Strategic Overview	<p>General comments on the new road, its design and the PEIR – General Strategic Overview</p> <p>The current consultation is on National Highway's preferred pink route, which shows connections back to J25 and provides a direct link back to Taunton. This addresses some of the strategic issues previously raised and is therefore viewed as a positive development.</p>		N/A
17	Somerset West and Taunton	General comments on the new road, its design and the PEIR – Links to Nexus 25	<p>General comments on the new road, its design and the PEIR – Links to Nexus 25</p> <p>The planned growth of Taunton as a Garden Town, including the development of the Nexus 25 strategic employment site adjacent to J25 (which has been granted consent via a Local Development Order), will give rise to an increase in traffic. An improved trunk road will provide beneficial additional capacity.</p> <p>The current consultation option presented provides direct access to Nexus 25 from the east, as well as connecting to the A378. This would help Taunton to become a more attractive place to work and do business by the local population and helps facilitate growth in Somerset and the South-West and along the A303/A358/A30 corridor.</p>	National Highways welcomes support for the vision of the scheme as expressed by Somerset West and Taunton (as was). This is reflected as a matter agreed within the Statement of Common Ground (SoCG) with Somerset Council (see Statement of Commonality, Document Reference 7.3).	N/A
18	Somerset West and Taunton	General comments on the new road, its design and the PEIR – Matter of Accuracy	<p>General comments on the new road, its design and the PEIR – Matter of Accuracy</p> <p>In paragraph 1.3.26, it might be helpful if the Local Authority context mentions the move to a unitary local authority for Somerset, which has been approved by the Secretary of State and is expected to be enacted in Spring 2023.</p>	This has been updated within ES Chapter 1 Introduction (Document Reference 6.2) and in the draft Statement of Common Ground (SoCG) with Somerset Council (see Statement of Commonality (Document Reference 7.3).	N/A
19	Somerset West and Taunton	General comments on the new road, its design and the PEIR – Links to Nexus 25	<p>General comments on the new road, its design and the PEIR – Links to Nexus 25</p> <p>The Council welcomes how the A358 scheme relates to the Nexus 25 strategic employment site and J25, as both schemes have been designed with a new connection to the A358 in mind. The Nexus 25 site has been granted consent via a Local Development Order and improvements to J25 are now complete. It is encouraging to see economic growth is being taken into account by a proposal to ensure that the A358 improvement scheme provides an effective and efficient relationship between J25, Nexus 25 and the A358 scheme.</p>	National Highways welcomes support for the vision of the scheme as expressed by the Somerset West and Taunton (as was). This is reflected as a matter agreed within the Statement of Common Ground (SoCG) with Somerset Council (see Statement of Commonality (Document Reference 7.3).	N/A
20	Somerset West and Taunton	General comments on the new road, its design and the PEIR –	<p>General comments on the new road, its design and the PEIR – Relationship of the new road to the Monkton Heathfield Development</p> <p>It is also worth considering that people living in the Monkton Heathfield area of Taunton, or even future residents of the proposed extension there (at Monkton Heathfield 2), who wish to go in the direction of</p>	The role of the A358 scheme is not to provide capacity on the road network for future developments that are not yet committed, especially ones that are some distance away from the A358 corridor. The point raised here is not specifically linked to the A358 scheme as a proportion of traffic from potential future development around Monkton Heathfield would travel	No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		Relationship of the new road to the Monkton Heathfield Development	Ilminster, currently go through the village of Creech-St.-Michael. This is the most logical and the quickest route. However, it is not appropriate. The Creech-St.-Michael Neighbourhood Plan has already identified traffic issues through the village and these are well known. New proposals for residential development at Monkton Heathfield 2, are likely to be submitted before Christmas this year (2021). Other schemes are also coming forward in the Monkton Heathfield area and there are other residential allocations at Nerrols and Lyngford Lane that will exacerbate existing traffic routes. This is all before we move to consider future potential allocations for residential land within the proposed new Local Plan. The Monkton Heathfield area is a prime area of consideration for such future allocations. So we should be trying to facilitate better road links for all this development where possible and the proposed new A358 might just provide the possibility for such a better road link. Although the proposed A358 will be some way south of all the Monkton Heathfield developments, National Highways are asked to make sure that the design for the new A358 does allow for the possibility of a new link to it from the Monkton Heathfield area, at some point in the future. Failing this, pressure may be raised for a new limited junction on the M5 to serve all this new development.	towards Ilminster irrespective of whether the A358 scheme goes ahead. There are existing issues associated with traffic from Monkton Heathfield passing through Creech St Michael. National Highways forecast traffic model shows that this would not be exacerbated by the A358 scheme.  National Highways confirms that the Monkton Heathfield development has been included in the development assumptions of the traffic modelling for this scheme. The methodology and results of the traffic modelling, including details of any is reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4).	
21	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Relationship of the new road to the Monkton Heathfield Development	General comments on the new road, its design and the PEIR— Relationship of the new road to the Monkton Heathfield Development  It is noted in chapter 2, Table 2-1 (Scheme vision, design principles and objectives), that clear reference is made to a scheme objective of 'facilitating growth in housing at key development hotspots along the corridor'. Although not strictly within the scheme corridor, the proposal is quite close to the development hotspot of Monkton Heathfield in the north-east of Taunton. In relation to likely trip generation arising from either committed development or from development that is likely to come forward in the very near future that the A358 project should consider, especially in terms of cumulative impacts and the traffic modelling, it is noted that account does not appear to have been taken of the proposed Monkton Heathfield phase 2 development. It is understood that National Highways only include developments that have planning permission or where planning permission is imminent. Planning permission is not necessarily imminent for Monkton Heathfield 2, but the application is expected to be received by the Local Planning Authority as soon as this month (November 2021). We could definitely say before Christmas 2021. On this basis, it is quite likely that it would be considered (and likely granted) before National Highways formally submit their proposal for the A358 to the Secretary of State. This point would need to be made in any subsequent public inquiry. So, it definitely should be included in the current traffic modelling, because this will not be a speculative or longer term project and it will have a distinct bearing on traffic considerations.	National Highways forecast traffic model includes future development proposals that have planning permission or where planning is imminent. Overall traffic growth within the traffic forecasts is constrained to the National Trip End Model (NTEM) data published by the Department for Transport at a regional level. This approach aligns with UK Transport Analysis Guidance (TAG).  National Highways confirms that the Monkton Heathfield development has been included in the development assumptions of the traffic modelling for this scheme. The methodology and results of the traffic modelling, including details of any is reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4).  The Monkton Heathfield 2 development has been included in ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2)	No
22	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Walking and Cycling Access and Infrastructure	General comments on the new road, its design and the PEIR— Walking and Cycling Access and Infrastructure  This topic forms an important part of the Council's response to this public consultation exercise. As there is no specific chapter of the PEIR that deals with this subject, the Council has placed its comments in this regard in the section relating to chapter 12 (Climate), as the Council's comments establish many links between the need for good cycling provision and climate change in general.	National Highways acknowledges the approach set out by SWT (as was) in relation to providing comments on the topic of walking and cycling infrastructure.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
23	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Further Information and Details	<p>General comments on the new road, its design and the PEIR— Further Information and Details</p> <p>The PEIR notes, in many of its chapters, that information is still being gathered and that it should be regarded as a preliminary assessment of the information held to date that will inform the ongoing environmental assessment process. This is made very clear at the start in chapter 1, paragraph 1.1.5, which states “It should be noted that the proposed scheme design is currently under development, environmental information is still being assembled, and impacts are still being identified”. It is also noted that Chapter 4, paragraph 4.3.11 identifies a significant number of surveys that are yet to be completed and remain ongoing. It is noted that the results of any further assessments will be within the Environmental Assessment which will be submitted to the Planning Inspectorate as part of the Development Consent Order for the proposed scheme. On this basis, the Council reserves the right to comment further to any ‘new’ information or details that may arise. It is hoped that National Highways, would seek to inform the locally affected Councils of any significant changes before the application for a Development Consent Order is formally submitted. In this way, both National Highways and the Councils will have the opportunity to consider and address matters further, all of which can save time when it gets to the Public Inquiry.</p>	<p>The purpose of the PEI Report was to provide information gathered to that date and to enable statutory and non-statutory bodies to provide their views. Since publication of the PEI Report, National Highways have been gathering further information from landowners, statutory and non-statutory bodies, and have collated these into an updated baseline. This baseline was used to inform the assessment which is included within the ES (Document Reference 6.2). Local councils affected have the opportunity to review the ES and its supporting figures and appendices (Document Reference 6.2, 6.3 and 6.4) and comment on any new information or design at the DCO hearings.</p> <p>National Highways are actively engaged with Somerset Council and will continue to do so in advance of the submitting of the Development Consent Order to discuss matters raised through a Statement of Common Ground, see Statement of Commonality Appendix A (Document Reference 7.3).</p>	N/A
24	Somerset West and Taunton	General comments on the new road, its design and the PEIR— General Strategic Overview	<p>General comments on the new road, its design and the PEIR— General Strategic Overview</p> <p>However, it is important that this additional dual carriageway does not lead to future pinch points at J25 of the M5, or on the main route into Taunton Town centre and that traffic should flow without hindrance. Therefore the set of traffic lights and filters and co-ordination of the sequencing of traffic lights, need to be given considerable thought, especially at peak times.</p>	National Highways are actively engaging with Somerset Council on the traffic impacts of the scheme on M5 junction 25 and along key routes where traffic volumes are forecast to increase, such as along A358 Tone way. Our operational model of M5 junction 25 and the Nexus 25 junction allows us to give detailed consideration to signal settings and offsets during peak hours and assess the impacts of design changes at the junction. This indicates that the M5 junction 25 and the Nexus 25 junction will operate within their practical capacity.	N/A
25	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Park and Ride Facilities (Taunton Greenway)	<p>General comments on the new road, its design and the PEIR— Park and Ride Facilities (Taunton Greenway)</p> <p>As Taunton is a Garden Town and it needs to demonstrate its zero carbon credentials, it is critical that there is effective interchange between different modes of transport at the Park and Ride site and any support to ensure the sustainability of such a service would be welcome from an economic and resilience perspective. Furthermore, it would be good to embed in the signage clear reference to the Park and Ride site and not only a bus service, but electric vehicle charging as well as other active travel modes including cycle parking, electric scooters and bicycles with safety traffic lights for bikes to cross safely into Taunton from the roundabout at J25 and consideration given to a bridleway too.</p> <p>Taunton wants to promote itself as an Innovation and sustainable district to compete against “15 minute cities”, whereby the county town has a distributed campus at the centre which links to Blackbrook business park and Nexus 25 through walking, cycling, electric vehicles an public transportation all within 15 minutes to connect businesses, institutions such as the College and the sector clusters and innovation ecosystem to create Taunton as both a business destination and Gateway to the peninsula.</p>	<p>National Highways acknowledges and welcomes the vision for Taunton Garden Town and particularly the ‘quality of our movement’ theme to achieve zero carbon credentials.</p> <p>Access into Taunton Gateway Park and Ride would be maintained, however upgrades to, and operations of, Taunton Gateway Park and Ride are outside the scope of the scheme.</p> <p>The scheme signage strategy is currently being reviewed as part of preliminary design and National Highways will continue to engage with the local authorities on this.</p> <p>The existing dedicated route for pedestrians and cyclists through M5 junction 25 and the Nexus 25 junction would be maintained as part of the scheme. Following statutory consultation, it is proposed to replace the roundabout at Nexus 25 with a signalised crossroads, which would make the junction more accessible for pedestrians and cyclists.</p>	No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
26	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Matter of Accuracy	<p>General comments on the new road, its design and the PEIR— Matter of Accuracy</p> <p>Paragraphs 1.3.9 &amp; 10 refer to the need to comply with The Environmental Impact Assessment Regulations 2017. There are of course two such documents,</p> <ul style="list-style-type: none"> <li>• The Town and Country Planning (Environmental Impact Assessment) Regulations 2017, and</li> <li>• The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017</li> </ul> <p>both of which were published on 16<sup>th</sup> May 2017. It is not specified in the two paragraphs of this opening chapter, but for the avoidance of doubt, it would be helpful to make clear that National Highways will be undertaking the Environmental Impact Assessment under the later of the two. It is noted that the appropriate reference is made in Chapter 4, paragraph 4.1.2.</p>	National Highways has undertaken the Environmental Impact Assessment (EIA) under the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 but has due regard to the Town and Country Planning (Environmental Impact Assessment) Regulations 2017. This is confirmed in ES Chapter 1 Introduction and ES Chapter 4 Environmental Assessment Methodology (Document Reference 6.2).	N/A
27	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	<p>General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document</p> <p>For ease of understanding, the Council now includes a summary of the key points it is making in this document. These are as follows –</p> <ol style="list-style-type: none"> <li>1. Somerset West and Taunton Council continues to support improvements to the A358 between Taunton and Southfields. The scheme is very much welcomed by the Council, as it will speed up access to Somerset and particularly Taunton as the County town.</li> <li>2. The Council welcomes how the A358 scheme relates to the Nexus 25 strategic employment site and J25.</li> </ol>	National Highways acknowledges the points raised by SWT (as was) and welcomes the general support provided for the scheme. Responses to individual matters raised are provided below however detailed responses are provided to each individual matter in the remainder of the table.	N/A
28	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	<ol style="list-style-type: none"> <li>3. The proposals do not appear to take on board the considerable planned expansion at Monkton Heathfield. The approved and proposed allocations at Monkton Heathfield Phase 2 should be included in the traffic modelling.</li> </ol>	<p>National Highways' forecast traffic model has been developed line with Transport Analysis Guidance. As part of this process National Highways has created an Uncertainty Log that collates information about all future developments included in the forecast traffic model. This is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>National Highways confirms that the Monkton Heathfield development has been included in the development assumptions of the traffic modelling for this scheme. The methodology and results of the traffic modelling, including details of any is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>It should be noted that overall traffic growth within the National Highways traffic forecasts are constrained to Department for Transport National Trip End Model (NTEM) data. The inclusion or exclusion of future developments from the model therefore only influences where these 'pockets of growth' occur within Somerset, but don't affect overall travel demand within the traffic forecasts.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
29	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	4. There is an urgent need for measures to improve air quality, particularly through Henlade. The proposals should help in this regard.	Support for the measures to improve air quality through the scheme, including at Henlade is welcomed. Air quality impacts have been assessed in further detail within the ES Chapter 5 and supporting appendices (Document Reference 6.2 and 6.4).	N/A
30	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	5. The Council has declared a Climate Emergency (February 2019) and an Ecological Emergency (November 2020). It is the opinion of the Council that the scheme does not adequately demonstrate how it is responding to the climate emergency and the Climate Change Act and in particular, no reference is given to the Council's resolution to be zero carbon by 2030.	National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment considers impacts over a 60 year period and compared emissions against the UK 4 <sup>th</sup> Carbon Budget (construction emissions) and the 5 <sup>th</sup> and 6 <sup>th</sup> Carbon budgets (for operation). This assessment has also been incorporated into ES Chapter 14 Climate (Document Reference 6.2), which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the EIA Regulations and guidance within DMRB LA 114 Climate. It concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.	N/A
31	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  6. The proposal does not seem to give sufficient regard to the need for cycle routes and facilities, both locally and strategically. For example, the Council is looking at the potential for e-bikes and a route from the Town Centre across the M5 to the Nexus business park and the nearby 'Park and Ride' facility. The proposal would not assist in this regard. The project is an opportunity to improve these links and to connect pedestrians and bike infrastructure to the city. In general, there could be greater provision of opportunities for pedestrian/cyclist access and crossings, for example at Capland or Bickenhall Lane	The A358 Taunton to Southfields Dualling scheme seeks to provide an offline cycle route that will serve cyclists in the local communities, giving people the opportunity to get out of their cars and onto bicycles for local journeys, it connects to the local road network and the existing Sustrans national cycle network and includes new off-road routes from Henlade to Southfields roundabout. Our scheme maintains connections with the nearby communities. As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway through Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. The A358 improvement scheme will provide: 19 new public rights of way, comprising seven footpaths, three bridleways and nine restricted byways, and four traffic free or very lightly trafficked bridges. No changes are proposed to pedestrian and cyclist provision at M5 junction 25 as part of the scheme which was designed and delivered by Somerset Council.	Yes
32	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  7. Additional consideration must be given to the impact on heritage assets at risk or those that will be negatively impacted upon by the proposals. There should be justification as to why the identified harm cannot be reasonably avoided. It appears to the Council that National Highways has not given 'great weight' to heritage assets as required by law.	Additional consideration has been given to heritage assets following advice provided by Historic England. ES Chapter 6 Cultural heritage (Document Reference 6.2) and supporting appendices contain detailed assessments of the scheme and include key photographic views in relation to cultural heritage.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			8. Further work should be undertaken to photograph key views of designated heritage assets. This work can also be used to help design appropriate mitigation or future landscaping.		
33	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  9. There needs to be further consideration of the impact of the proposal on the landscape and greater protection of woodlands and trees.  10. The scheme has not been assessed against all of the National (landscape) Character Areas (NCA) that it would pass through.	Impacts on the local landscape, its character and views from a short and long distance have are presented within the ES Chapter 7 Landscape and visual effects and supporting appendices (Document Reference 6.2 and 6.4). The landscape impacts of the scheme have been assessed in accordance with the methodology within, and feedback to, the Environmental Statement Scoping Report. The scope of Environmental Impact Assessment (EIA) assessment should be limited to those aspects of the environment that are likely to be significantly affected. NCA 140 includes the existing A358 north of Southfields Roundabout, and the NCA also includes other major road corridors, it is unlikely that the nature of the change would have the potential to result in significant landscape impacts on NCA 140. NCA 146 includes the existing A358 south of M5 junction 22, and the NCA also includes other major road corridors, it is unlikely that the nature of the change would have the potential to result in significant landscape impacts on NCA 146. NCA 147 is physically separate from the scheme by approximately 1.5 km plus, it is unlikely that the nature of the change would have the potential to result in significant landscape impacts on NCA 140, impacts on views are considered in the visual assessment.	N/A
34	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  11. There needs to be a better solution to potential noise pollution than the suggested noise barriers. These are visually intrusive and become the targets for graffiti. Appropriate planting, and a significant amount more than is currently proposed, would appear to be the only natural solution to the issue of additional noise pollution.	Details of proposed noise and vibration mitigation is detailed within ES Chapter 2 The project and within the technical chapter of the ES (see Chapter 11 Noise and vibration, Document Reference 6.2). An Environmental Management Plan (EMP) has also been prepared and is presented as ES Appendix 2.1 (Document Reference 6.4). The use of visual/acoustic bunds and barriers together with landscape planting has been incorporated into the scheme where appropriate. Full details are shown on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3).  The use of trees to act as acoustic screening to minimise noise is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of vegetation required, tree planting is not generally adopted as a reliable noise mitigation measure.  ES Chapter 7 Landscape and visual effects (Document Reference 6.2) presents the assessment of the landscape and visual impact assessment for the construction stage and operational stage. This includes representative viewpoints from the opening year and 15 years after opening following the establishment of mitigation which considers the impact of the scheme including noise bunds and barriers.	N/A
35	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  12. The tree losses referenced cause the Council some concern. Replacement planting is welcomed, but it would be some years before the new trees are either providing a visual barrier or sequestering the same carbon as the established trees. On this basis, the Council firmly believes that there needs to be an significant net gain of trees in the proposal.	The environmental mitigation presented on ES Figure 7.8 Environmental Masterplan (Document Reference 6.3) details how lost trees and vegetation will be mitigated. Areas of tree, woodland, screening, planting and hedgerows with trees are proposed in locations where they are deemed to be required and most effective in mitigating impacts, however numbers of proposed trees are not quantified at this stage of design as the mixes, densities, and layouts will be developed at the detailed design stage, subject to successful DCO consent.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow and woodland habitat creation, as well as new water channels and ponds. All new planting would use native species that reflect the species composition of those habitats lost to the construction of the scheme and those of greatest wildlife benefit. Habitat creation areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358. The translocation of trees and hedgerows is also proposed in key locations within the scheme. These locations and detailed strategies for the successful implementation of the translocations are included within the Environmental Management Plan (Document Reference 6.4 Appendix 2.1).</p> <p>A requirement will be part of the draft DCO submitted with the application, this will require the submission and approval of a detailed landscaping scheme which the local planning authority and local highway authority would be consulted on.</p>	
36	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	<p>General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:</p> <p>13. It is noted that the Environment Bill has now passed into law, with Royal Assent being granted on Tuesday 9<sup>th</sup> November 2021. Amongst other matters, this Bill now makes a 10% Biodiversity Net Gain a legal requirement for new developments. The proposal does not appear to address this.</p>	<p>The Environment Act 2021 became law in November 2021. However, the obligation for Nationally Significant Infrastructure Projects (NSIPs) to deliver an increase of at least 10% biodiversity value is not expected to come into force until November 2025. Defra is developing a draft biodiversity gain statement, which will set out the detail of the biodiversity net gain objective and requirements for NSIPs.</p> <p>Due to the timing of the DCO application for the scheme, it is anticipated that the requirement to meet the biodiversity net gain objective will not apply to the determination of the application and the mechanism to secure land for the purposes of delivering net gain will not be in place. As a result, the scheme instead seeks to maximise biodiversity through essential mitigation requirements for delivery in accordance with current statutory and policy requirements.</p> <p>A high-level quantification of the level of biodiversity that would be lost due to the scheme, and the additional biodiversity resource provided by the habitat creation/enhancement included within the scheme, has been undertaken using Defra metric version 3.1, and is detailed within the Biodiversity Metric Report, included in ES Appendix 8.6 (Document Reference 6.4). This matter is discussed in the Statement of Common Ground with Somerset Council (Statement of Commonality Document Reference 7.1).</p>	N/A
37	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	<p>General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:</p> <p>14. National Highways has not taken on board the current critical situation in the Somerset Levels. There is a need to incorporate more wetlands and other measures to support the reduction of phosphates for the RAMSAR site.</p>	<p>A sustainable drainage design has been developed for the scheme. This has been informed by a detailed assessment of the potential impact of highway related runoff (using National Highways Water Risk Assessment (HEWRAT) tool) to ensure that an appropriate sequence of water quality treatment is in place to tackle the pollutants generated by the highway network (metals and hydrocarbons). In addition, embedded mitigation measures have been included for specific watercourses providing watercourse channels with a more natural plan form and cross sections which enhance aquatic vegetation and have been known to buffer the effects of high nutrient loading.</p> <p>National Highways are aware of the Biodiversity Emergency issued by Somerset Council following advice issued by Natural England that the Somerset Levels and Moors SPA and Ramsar site is in unfavourable</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				conditions primarily due to phosphate levels in surface water. In response, Somerset Council are considering phosphate emissions from developments given within planning applications, primarily developments such as residential, agricultural, and commercial developments. Road developments are not considered significant sources of phosphates. However, we have considered the potential impacts of phosphates from the scheme on designated sites and have reported the results (no significant effects) of this assessment in the Habitats Regulations Assessment – Screening and Statement to Inform Appropriate Assessment (Document Reference 6.5).	
38	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  15. The Council is disappointed that there does not appear to have been a strategy for maximising the use of a local labour force for the construction of the new road.	The assessment in ES Chapter 12 Population and human health (Document Reference 6.2) is in accordance with the DMRB standard LA 112 Population and human health. It sets out, at a high level, employment and economic matters and assumptions that are relevant to the assessment of likely significant effects on population and human health, including local communities.  LA112 does not require provision of the anticipated total number of workers required during construction. Further information on the number of workers can be made available once a contractor is appointed, which is the point at which more certainty can be provided.  At this stage, there is no need/requirement for an Employment and Skills Plan to be adopted. National Highways is a responsible employer, and it helps ensure through its sustainable procurement practices that community benefits and targeted recruitment and training benefits are realised through its delivery of programmes and projects, including the A358 Taunton to Southfields Dualling Scheme.  National Highways can provide further information about its tendering process on request. A successful contractor would be required to deliver such benefits and its performance will be carefully monitored and evaluated during construction in accordance with National Highways Key Performance Indicators.	N/A
39	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  16. The Council will have to reserve judgement on the Appropriate Assessment and cumulative impact tests, as these have not yet been finalised.  17. In fact, further information and assessments will be made in many areas as part of National Highways on-going development and planning for the new road. It is hoped that these additions can be discussed with the Council before the formal submission to the Secretary of state is made.	The Habitats Regulations Assessment: Screening and Statement to Inform Appropriate Assessment is submitted with the DCO application (Document Reference 6,5). The assessment of cumulative effects is presented within ES Chapter 15 (Document Reference 6.2).  National Highways engaged with SWT (as was) concerning the ongoing development and planning for the scheme through working groups, as detailed in the Statement of Common Ground with Somerset Council (Statement of Commonality Document Reference 7.3).	N/A
40	Somerset West and Taunton	General comments on the new road, its design and the PEIR— Summary of Key Points being made by	General comments on the new road, its design and the PEIR— Summary of Key Points being made by the Council in this Document:  18. The Council would support the setting up of the Community Fund to help those impacted by the proposals for this new road.	National Highways are continuing to engage with Somerset Council in relation to potential future funding opportunities as appropriate.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		the Council in this Document			
41	Somerset West and Taunton		Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)  The Report states that the potential air quality impacts from the construction and operation of the Scheme will follow the methodology set out in the Design Manual for Roads and Bridges (DMRB) LA 105 Air Quality [1] and the Environmental Impact Assessment (EIA) Scoping Report.	National Highways acknowledge this comment.	N/A
42	Somerset West and Taunton	General comments on the new road, its design and the PEIR-- Summary of Key Points being made by the Council in this Document	Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)  The proposal is part of a larger scheme, including works on the A303, where the aim is to provide an improved strategic route from London to the South West. This will lead to more traffic using the new dualled A358 than uses the present road. This could have implications for air quality along the new route and is a concern to the Council.	National Highways acknowledges the range of views expressed by SWT (as was) in relation to the scheme. Traffic flows associated with the A303 Sparkford to Ilchester and A303 Stonehenge schemes have been included in the traffic data provided for use in the air quality assessment and therefore the combined impact of these schemes and the A358 Taunton to Southfields scheme have been assessed.	N/A
43	Somerset West and Taunton	General comments on the new road, its design and the PEIR-- Summary of Key Points being made by the Council in this Document	Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)  The methods outlined in the PEI Report for assessing the impact of air quality, are in line with what would be expected for this type of scheme.	National Highways acknowledge that methodology for assessing air quality is accepted by SWT (as was).	N/A
44	Somerset West and Taunton		Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)  This all accepted to be reasonable assumptions at this stage.	National Highways welcome the acceptance of assumptions presented within the PEI Report.	N/A
45	Somerset West and Taunton		Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Archaeology  In paragraph 6.6.25 the reference to the value of six HCLA's as low and two HLCA's with potential medieval activity as medium, is considered to be appropriate.	National Highways welcome support for the proposed assessment methodology.	N/A
46	Somerset West and Taunton	General comments on the new road, its design and the PEIR-- Summary of Key Points being made by the Council in this Document	Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)  The main benefits of the proposal in respect of air quality, are to properties on the existing road in Henlade, which will benefit from the new road bypassing the village. However, it is also noted that the Scheme will also lead to some adverse effects to properties along the route.	The ES predicts no exceedances of the Air Quality Objectives at human receptors associated with changes in operational traffic flows or speeds in the Base, Do Minimum (without scheme) or Do Something (with scheme) scenarios. With no exceedances of the Air Quality Objectives at human receptor locations and improvements in the Henlade Air Quality Management Area (AQMA) it is considered the proposed scheme would have no significant effects on air quality in relation to human health. Overall, the scheme is considered to have a beneficial impact on local air quality in relation to human health due to the reductions in NO2 concentrations within the AQMA.	N/A
47	Somerset West and Taunton		Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)  Potential effects during the construction phase have been assessed following DMRB LA 105 Air quality and will feed into the Environmental	National Highways welcome acceptance of assumptions made in the PEI Report in relation to Air Quality. The methodology and results of these assessments including the impact of construction dust has been reported in ES Chapter 5 Air Quality and supporting appendices (Document References	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Management Plan (EMP) attached to the ES. This will need to be assessed when completed and made publicly available.	6.2 and 6.4). An assessment of construction traffic was scoped out based on the standards outlined within DMRB LA 105 Air Quality.	
48	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)</p> <p>The results of modelling predict that during the operation phase there will be no likely significant adverse effects on local air quality concentrations predicted at human receptors. There will be permanent beneficial effects in the existing Henlade Air Quality Management Area due to relieving congestion and the move of the road away from receptors.</p>	National Highways acknowledges the comments made by SWT (as was) in relation to the PEI Report. The methodology and results of updated assessments are reported in ES Chapter 5 Air Quality and supporting appendices (Document References 6.2 and 6.4).	N/A
49	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)</p> <p>Regarding air quality in the Council area, the main benefit from the Scheme will be the by-passing of Henlade, which will lead to a significant reduction in traffic passing through the village. The Report predicts that there will be no adverse impact on air quality at human receptors from the operational phase of the Scheme.</p>	National Highways welcome acceptance of the air quality benefits to by-passing traffic from Henlade. The methodology and results of these assessments updated assessments are reported in ES Chapter 5 Air Quality and supporting appendices (Document References 6.2 and 6.4).	N/A
50	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)</p> <p>There is the potential for some adverse impact during the construction phase, and the Report outlines some mitigation measures that could be taken during the construction phase.</p>	National Highways acknowledges the comments made by SWT (as was) in relation to the PEI Report and construction. The methodology and results of updated assessments including the impact of construction dust has been reported in ES Chapter 5 Air Quality and supporting appendices (Document References 6.2 and 6.4) and supporting appendices. An assessment of construction traffic was scoped out based on the standards outlined within DMRB LA 105 Air Quality.	N/A
51	Somerset West and Taunton	General comments on the new road, its design and the PEIR - Summary of Key Points being made by the Council in this Document	<p>Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)</p> <p>While there are plans and figures showing relevant information, the details of the data or calculations regarding the air quality and noise assessments are not included with the Report. Without this information is it not possible to give a detailed comment on the assessment carried out so far, therefore, it should be included in the more detailed reports to follow or, made available on request.</p>	<p>Operational traffic noise assessments have been carried out in accordance with CRTN which is the standard UK methodology for assessing noise from new and altered roads, together with minor updates to methodology as outlined in DMRB LA 111 Appendix A. Computer noise models were built using the full 3D engineering design based on preliminary design. Traffic data inputs are described in paragraph 11.4.18 and 11.4.19. Predictions of noise levels at sensitive receptors during operation are presented in Appendix 11.5 of the ES Appendices (Document Reference 6.4).</p> <p>Construction noise predictions have been undertaken following the prediction methodology in BS 5228 using source noise levels taken from BS 5228 Annex C as set out in Appendix 11.4 of the ES Appendices (Document Reference 6.4). These have been used to predict the noise levels at sensitive receptors from the works for different activities. Further detail on construction noise and vibration predicted levels are reported in Appendix 11.4 of the ES Appendices (Document Reference 6.4).</p> <p>The impact of construction dust and operational traffic are assessed and reported in the ES Chapter 5 Air Quality following the guidance outlined within DMRB LA 105. In accordance with this guidance a simple level assessment was undertaken. The methodology and results of these assessments are reported in ES Chapter 5 Air Quality and supporting appendices (Document References 6.2 and 6.4). Best practice mitigation measures relating to construction dust and construction traffic are included in the Environmental Management Plan (EMP) (ES Appendix 2.1, Document Reference 6.4).</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
52	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 5 (Air Quality) and Chapter 16 (Summary)</p> <p>Chapter 5 states that the previous Environmental Impact Assessment (EIA) Scoping Report recommended a "simple" level of assessment is required for the EIA as the scheme was defined as low risk, and that this approach was agreed in the Planning Inspectorate's EIA Scoping Opinion.</p>	National Highways notes the summary provided by SWT (as was) in relation to the initial scope of assessment for air quality as set out within the EIA Scoping Report.	N/A
53	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>45 viewpoints of representative locations were proposed based on the ZTV output and site visits. The viewpoints were agreed in principle with Officers at Somerset West and Taunton Council, Natural England, and the Blackdown Hills AONB Service.</p>	National Highways welcome support for the methodology proposed.	N/A
54	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>In summary, the suite of techniques described in the PEIR reflect the appropriate methods for detection, identification and assessment of buried archaeological heritage assets. The use of DMRB as an assessment tool is in line with other infrastructure projects and is a suitable methodology to appraise the significance of impacts. The identification and assessment of HLCA's is appropriate.</p>	National Highways welcome support for the proposed assessment methodology and techniques for detection, identification, and assessment of buried archaeological heritage assets.	N/A
55	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>Chapter 2, paragraph 2.6.9 states that the mitigation measures for archaeological issues, will be described within a Detailed Archaeological Mitigation Strategy and Overarching Written Scheme of Investigation. The Council considers that this is a sensible approach to implementation of a mitigation strategy.</p>	National Highways acknowledge support for the proposed mitigation strategy.	N/A
56	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>The Council can confirm that the assessment of the value of non-designated heritage assets, referred to in paragraph 6.6.24, is appropriate based on current knowledge.</p>	National Highways acknowledge this comment.	N/A
57	Somerset West and Taunton	<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>Chapter 15 considers 'Cumulative effects and contains reference to issues of archaeological importance. Paragraph 15.3.4 notes that archaeological issues are covered in the Combined effect assessment section. Of particular relevance are Table 15-7, which considers the effects on archaeology and Table 16-1, where the effects on buried archaeology are considered.</p>	N/A		
58	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Figure 6.1 (Designated Heritage Assets, sheets 1, 2 and 3)</p> <ul style="list-style-type: none"> <li>The maps should be clearer to show both the existing A358 and the proposed pink modified option route, with the location of designated assets.</li> </ul>	National Highways acknowledges the comments provided in relation to the PEI Report figures. The cultural heritage figures which support ES Chapter 6 Cultural heritage are presented within Document Reference 6.3.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<ul style="list-style-type: none"> <li>• The map has not been angled on a north south axis so it is more difficult to locate and compare to other maps. Key settlement titles could be added to the maps to aid orientation.</li> <li>• Map 3 shows designated heritage assets with the new road and area of work. However, there could be another map to show the overall layout with the key assets that are considered to be at risk and a larger scale map to identify how close the new road will be to them.</li> <li>• The maps only show reference numbers to the heritage assets and could include a legend to show the name of the asset on each map</li> <li>• There could be a large scale map to show relationships with the new road to assets considered to be at risk from development such as Musgrave farmhouse, where the new road will cut between the barns and farmhouse, even though there is open ground around it.</li> </ul>		
59	Somerset West and Taunton		<p>Comments on PIER - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>It is noted in paragraph 6.3.1 that Local guidance issued by the South West Heritage Trust is utilised in the 'assessment methodology', as well as the expected professional guidance issued by the Chartered Institute for Archaeologists and Historic England. This is welcomed and recommended.</p>	National Highways acknowledge support for the proposed assessment methodology.	N/A
60	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>The main thrust of the archaeology case is given in Chapter 6. The Council notes the methodology (DMRB) referred to in Paragraph 6.1.1 as being an accepted method to assess impacts on buried archaeology on infrastructure projects. The DMRB sets out the techniques to apply to assets to understand their significance and to qualify the potential impacts on assets.</p>		N/A
61	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>With specific regard to the assessment of Cumulative effects, the comments in Chapter 6, Table 6.5 relating to the assessment of impacts on buried archaeological heritage assets are reasonable and the mitigation strategies outlined are appropriate. The comments in Chapter 15, Table 15.7 that there will be "Permanent adverse significant effects on below ground archaeology (known and unknown) within the footprint of the proposed scheme" is considered to be a realistic assessment of impacts. It is also noted that the permanent adverse effect of the loss of several anciently enclosed fields is identified.</p>	National Highways welcome support for the proposed assessment methodology and techniques for detection, identification, and assessment of buried archaeological heritage assets.	N/A
62	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>The division into 8 Historic Landscape Character Areas (HLCA's) referenced in paragraph 6.6.21 is considered by the Council to be a sensible method of cataloguing distinct areas. The identification of these 8 HLCA's is accepted, based on their shared characteristics.</p>	National Highways acknowledge support for the proposed assessment methodology.	N/A
63	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p>	The route selection process is complete as outlined in the Preferred Route Announcement in June 2019. It should be noted that the preferred route choice was made on a range of considerations, including the environment, cost and buildability. Cultural heritage was one of the environmental disciplines considered. National Highways has progressed the scheme	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>Appendix 3.1 (Route Options)</p> <p>Blue Option &amp; Orange options.</p> <p>It is noted that with the blue and orange options, there would be the potential to have a Large Adverse effect on the archaeological remains and listed buildings and structures. Again, the appropriate weight does not appear to have been afforded to these in accordance with the provisions of the NPPF. However, as these two routes are not being taken forward, maybe this is not a significant defect in the respective cases.</p> <p>Pink modified option</p> <p>The pink route option has now been modified, although for the majority of its length it still follows the pink option. The pink modified option is still referenced as affecting archaeological remains and Listed Buildings and structures. The justification for this option is that it is more affordable and has less landscape impact. Importantly though, it still does not demonstrate that great weight has been given to the conservation of the heritage assets in accordance with the requirements of the NPPF.</p>	<p>accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the ES (Document Reference 6.2). Please refer to Chapter 2 of the Consultation Report (Document Reference 5.1) for further information.</p>	
64	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>It is noted from Chapter 4, paragraph 4.3.11 that two archaeological surveys are on- going, and the consultants are engaging with the appropriate authorities and statutory advisors (the South West Heritage Trust and Historic England). Site visits to monitor the trial trenching will take place on a weekly (or otherwise arranged) basis. Please note that desk-based assessment, geophysical survey and trial trenching are the professional standard methodologies applied to prospection for previously unknown archaeological assets and are the appropriate techniques for assessing the archaeological potential of the impact area.</p>	<p>National Highways have undertaken extensive geophysical survey and trial trenching to support the desk-based assessment also undertaken. The results have been reported within the ES submitted with the DCO application (see Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)).</p>	N/A
65	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>It is acknowledged that the reference in paragraph 6.8.2 to the options of preservation by record, that is excavation and recording, of archaeological heritage assets is a recognised mitigation within development projects. Preservation in-situ is only appropriate where heritage assets are of high significance and their continued preservation can be assured.</p>	<p>National Highways acknowledge comments provided by SWT (as was) in relation to the proposed assessment methodology.</p>	N/A
66	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Archaeology</p> <p>It is noted that Paragraph 6.6.20 considers the initial assessment of potential for archaeological survival within the scheme boundary as being broadly high. This is considered by the Council to be a reasonable assessment. The periods with the most potential are described in this paragraph and are, on current knowledge, considered to be realistic. The assessment surveys described in paragraph 4.3.11 will further clarify the assets present on the scheme, enable the significance of assets to be described and any potential impacts assessed through the application of DMRB.</p>	<p>National Highways acknowledge comments raised by SWT (as was); assessment surveys are outlined in ES Chapter 6 Cultural heritage (Document Reference 6.2).</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
67	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>The comments in paragraph 6.5.3 are welcomed. The Zone of Theoretical Visibility (ZTV) should establish any impact on wider assets. The assets more likely to be affected would be church towers, registered parks and gardens or higher grade houses with designed gardens. The Council recommends that a schedule is prepared of key views following the ZTV.</p>	National Highways acknowledges this concern. Key views have been included in the description of heritage resources setting, where applicable, in the ES submitted within the DCO application (see ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4), specifically ES Appendix 6.3 Gazetteer of Heritage Resources).	N/A
68	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>All of the above will need to be assessed when the Council receives sight of the additional information referred to. So, judgement is reserved at this stage.</p>	The findings of the noise assessment are presented in Chapter 11 of the Environmental Statement (Document Reference 6.2).	N/A
69	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 2 (The Project)</p> <p>Paragraph 2.6.8 of chapter 2 references noise mitigation and vibration, as reported in chapter 11. It states that mitigation measures 'would reduce or prevent adverse effects on heritage resources arising from changing noise levels'. However, there is no consideration in the report of whether there would be special consideration of vibration near heritage assets which may have more friable material in their construction. This needs to be addressed.</p>	<p>National Highways acknowledges the concern regarding the impact of vibration on heritage assets. Consideration of noise and vibration effects on cultural heritage assets has been included within the ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4) and mitigation relating to construction techniques addressed where appropriate.</p> <p>Vibration construction mitigation measures are documented within ES Chapter 11 Noise and vibration (Document Reference 6.2) and within the Environmental Management Plan (ES Appendix 2.1, Document Reference 6.4).</p>	N/A
70	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 3 (Assessment of Alternatives)</p> <p>Paragraph 3.1.3 refers to reasonable alternatives that have been studied prior to this option being selected. It is not clear from this section whether great weight has been given to heritage factors in choosing this option and whether public benefit or other factors overrode the strongest heritage choice. Paragraph 199 of the National Planning Policy Framework (NPPF) makes quite clear that 'when considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be)'. This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance. It does not appear that any consideration has been given to this important and compulsory requirement. The NPPF goes on to clarify in paragraph 200, that 'Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification'. No reference is made to these two important paragraphs in planning law and there appears to have been no attempt to relate impacts to heritage assets arising from the proposal for the A358, to this criterion.</p>	<p>National Highways note comments raised in relation to weight given to cultural heritage within the assessment of alternatives. It should be noted that the preferred route choice was made on a range of considerations, including the environment, cost and buildability. Cultural heritage was one of the environmental disciplines considered. The assessment of alternatives is presented as ES Chapter 3 (Document Reference 6.2).</p> <p>The purpose of the assessment presented in the ES (Document Reference 6.2) is to assess the potential significant environmental effects which may arise from the preferred route. This includes a detailed assessment of impacts on cultural heritage (See ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)). The aims and objectives of the NPPF have been taken into account within ES Chapter 6 (Document Reference 6.2).</p>	N/A
71	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p>	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>Conclusion to Chapter 2</p> <p>The assumed zone of 1 km is acceptable for designated heritage assets, but the zone for non-designated heritage assets should be expanded from 250 metres to 1 km. There is no apparent heritage impact to the proposed demolition of buildings. However, further consideration should be given to vibration near heritage assets.</p>	<p>considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).</p>	
72	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage)-- Overall Conclusions to consideration of Heritage Assets</p> <p>A study of key views should be undertaken of the assets at risk and should include detailed designs of how harm can be minimized towards the assets if unavoidable. Where there are designed views to designated assets there should be a more in depth study to understand them and to ensure proposed works compliment them.</p>	<p>National Highways acknowledges this concern. Key views have been included in the description of heritage resources setting, where applicable, in ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4), specifically ES Appendix 6.3 Gazetteer of Heritage Resources.</p>	N/A
73	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 3 (Assessment of Alternatives)</p> <p>Paragraph 3.4.11 refers to the options being based on Design Manual for Roads and Bridges, but it is not clear here as to the extent which, if at all, heritage assets featured in this elimination process. The Council requests that some consideration to heritage assets in the vicinity of the other routes should be referenced here as a comparator.</p> <p>This lack of consideration of the importance of heritage assets is continued in paragraph 3.5.1. The justification for the pink modified option refers to it as being the best performing option, as the scheme objectives are more affordable and have less impact on the countryside. The objective should also be to give great weight to protection of heritage assets as required by the NPPF. In fact, heritage assets are one of the few considerations within the NPPF where it is clearly stated that due consideration must be given. This is not referenced at all in this suing up of the reasons for choosing the pink route.</p>	<p>National Highways acknowledges the comments provided by SWT in relation to the assessment of alternatives. The route selection process is complete as outlined in the Preferred Route Announcement in June 2019. It should be noted that the preferred route choice was made on a range of considerations, including the environment, cost and buildability. Cultural heritage was one of the environmental disciplines considered. The assessment of alternatives is presented as ES Chapter 3 (Document Reference 6.2).</p> <p>The purpose of the assessment presented in the ES (Document Reference 6.2) is to assess the potential significant environmental effects which may arise from the preferred route. This includes a detailed assessment of impacts on cultural heritage (See ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)). The ES only assesses those assets that lie within the study area of the scheme as detailed within the chapter.</p>	N/A
74	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 5 (Air Quality)</p> <p>Paragraph 5.9.22 (and other paragraphs within chapter 5) refer to a reduction in concentrations of particulates (in relation to air quality), due to the A358 being moved away from the sensitive receptor of Henlade AQMA. This is a laudable and commendable aim. However, impacts of poor air quality can also affect heritage assets and will impact upon the settings of heritage assets. This has not been given any consideration in this chapter. Generally, the chapter refers to biodiversity impacts. However, the Council strongly advises that the setting of an Heritage Assets should also encompass the experience of the asset. So this chapter should cross reference not only biodiversity but heritage assets also. This is particularly important with registered parks and gardens, such as at Hatch Beauchamp.</p>	<p>National Highways acknowledges comments made in relation to poor air quality and its impact for heritage assets. However, sulphur dioxide (SO2) concentrations, which are associated with degradation of building materials, are well below recommended objectives and are therefore not anticipated to be a risk for this scheme. The impacts of construction dust associated with the construction of the new route are predicted to be negligible with implementation of best practice mitigation measures, which are outlined in the Environmental Management Plan (Appendix 2.1, Document Reference 6.4). All relevant receptors have been assessed and included in the ES Chapter 5 Air quality (Document Reference 6.2) following national and best practice air quality guidance. Chapter 5 of the ES cross-references Chapter 6 Cultural heritage where appropriate.</p>	No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
75	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 3 (Assessment of Alternatives)</p> <p>Paragraph 3.4.6 Refers to a two stage assessment being undertaken, firstly against environmental constraints and scheduled monuments, and then secondly assessment on more local criteria. This statement and form of assessment is classing 'heritage' as a local criterion and is ignoring the importance of 'heritage' nationally. Heritage must not be downgraded in this way.</p>	National Highways acknowledges the comments provided by SWT (as was) in relation to the assessment of alternatives. The assessment of cultural heritage is presented as ES Chapter 6. The assessment of alternatives is presented as ES Chapter 3 (Document Reference 6.2). Both assessments have been undertaken according to the approach set out in the Design Manual for Roads and Bridges (DMRB) LA104 Environmental assessment and monitoring and LA106 Cultural heritage assessment.	No
76	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Conclusion to Chapter 6.</p> <p>Further work should be undertaken to photograph key views of designated assets. This work can also be used to help design appropriate mitigation or future landscaping. A procedure should be established for discovery of milestones and boundary markers. Some documents should be amended to include reference to historic assets.</p>	<p>Viewpoints have been created as part of the landscape assessment within ES Chapter 7 Landscape (Document Reference 6.2) see ES Figure 7.7 (Document Reference 6.3). The selection of views has been informed through discussion with the heritage topic, although other considerations, such as public access and the openness of views, have factored into this.</p> <p>Milestones have been identified from analysis of historic mapping, photographs and, where safe, walkover surveys. However, along the high-speed road boundary, it has not been possible to ground-truth survival of milestones and markers. As a result, a worst-case approach has been taken, where it assumes that the resources survive and will be impacted, and appropriate mitigation has been included.</p>	N/A
77	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Paragraph 6.5.5 refers to a noise impact assessment as given in chapter 11 (noise and vibration). This will examine the impact on the experience of the asset, but the vibration assessment will also usefully inform construction techniques where the impact of piling may be reduced to protect the buildings from harm during and after construction of the new road from adverse vibration.</p>	National Highways acknowledges the concern regarding the impact of vibration on heritage assets. Consideration of noise and vibration effects on cultural heritage assets has been included within the ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4) and mitigation relating to construction techniques addressed where appropriate.	No
78	Somerset West and Taunton		<p>Comments on PEIR Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Paragraph 6.2.20 refers to further supporting material that will be sought to inform the DCO application. Such further material should include making use of aerial photography that has been carried out by Historic England (where available). It is not clear that this important source of reference either has, or will be, accessed analysed and utilised.</p>	National Highways has carried out extensive desk-based assessment, including analysis of available aerial imagery and the National Mapping Programme data. This is reported within the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)).	N/A
79	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 7 (Landscape)</p> <p>Within Paragraph 7.6.57, the parkland at Henlade House, although not registered, should be considered in this section.</p>	Paragraph 7.6.57 of the PEI Report reported on "nationally designated area" (and at relevant paragraph 7.7.69-- 7.7.73 of Chapter 7 of the ES) as the parkland at Henlade House is not nationally designated it is not referenced here. The parkland is shown as "woodpasture and parkland" on Figure 7.1 (Document Reference 6.3). The parkland is referenced in the description for the Fivehead Farmed and Wooded Vale character area within the ES (Document Reference 6.2). It is also considered as a non-designated heritage asset within Chapter 6 Cultural heritage of the ES (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
80	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>In general terms, it is noted that the consideration of heritage assets is spread across several documents, with cross referencing between them. One comprehensive and cumulative document on heritage assets would have been more useful. Also, throughout the chapters it is not clear whether the asset that is being referred to is in Somerset West and Taunton or in South Somerset District. For these reasons, the following text will consider all such heritage references and not confine itself only to chapter 6 (cultural heritage).</p>	National Highways acknowledges this challenge. Given the scale of the cultural heritage topic, it is considered necessary to present it within a series of linked documents. The cultural heritage assessment (ES Chapter 6: Cultural Heritage and supporting appendices (Document Reference 6.2 and 6.4)) has been produced in line with DMRB LA106 Cultural heritage assessment.	N/A
81	Somerset West and Taunton		<p>Comments on PEIR - Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Paragraph 6.5.2 refers to a 1 kilometre buffer zone for designated assets to be considered. The Council considers this to be appropriate and acceptable.</p>	National Highways welcome support for the proposed assessment methodology.	N/A
82	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Paragraph 6.5.6 refers to Non-designated assets within 250 metres of the scheme boundary. The Council strongly recommends that this is increased to 1 kilometre, as it may impact on non-registered parks and gardens related to designated assets.</p>	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. National Highways has assessed impacts to non-registered parks and gardens related to designated assets as part of the setting assessment for the designated asset, as harm to associated features could result in harm to the designated asset. As such, any significant effects on non-designated parks and gardens related to designated assets have been assessed in the ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4).	No
83	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Paragraph 6.7.10 identifies that 'The operational phase of the proposed scheme has the potential to result in both beneficial and adverse impacts on the setting of cultural heritage resources due to traffic noise and the visibility of moving vehicles on the road'. Where the operational phase of the scheme is likely to impact permanently and adversely upon an asset, the mitigation should be individually outlined and justified within the document.</p>	Potentially significant operational effects on heritage assets is reported within ES Chapter 6 Cultural heritage (Document Reference 6.2) with additional detail within the supporting appendices (Document Reference 6.4).	N/A
84	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 11 (Noise and Vibration)</p> <p>Paragraph 11.3.15 should include an intention to lower ram piling levels where appropriate, in order to protect historic fabric. Each listed building within the buffer zone should be assessed to determine whether it is likely to be vulnerable to vibration damage.</p>	Piling activities will be undertaken using an augered piling method to reduce vibration wherever practicable. Construction vibration levels have been calculated at surrounding vibration sensitive receptors including any heritage assets identified as requiring assessment by National Highways. This is reported regarding heritage assets identified in Chapter 6 Cultural heritage of the ES (Document Reference 6.2). Vibration construction mitigation measures are documented within ES Chapter 11 Noise and vibration (Document Reference 6.2) and within the Environmental Management Plan (ES Appendix 2.1, Document Reference 6.4).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
85	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Paragraph 6.8.7 refers to milestones requiring removal and relocation. Where milestones are discovered, the location of the milestone should be recorded as they are historic distance indicators. Afterwards, they should be re-sited as close as possible to their original individual location so that the statistic on the milestone is still relevant.</p>	National Highways acknowledges this approach and has incorporated the detail into the mitigation proposed within the ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A
86	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Table 6-5 refers to impact on key listed buildings. Where buildings have been identified for any permanent adverse construction impact, it should also include a statement on what options have been considered to avoid the adverse impact.</p>	ES Chapter 6 Cultural heritage (Document Reference 6.2) describes the impacts of the scheme, with additional detail within the supporting appendices (Document Reference 6.4). This chapter does not discuss the design development process, the options assessment process is set out in ES Chapter 3 Assessment of alternatives (Document Reference 6.2).	N/A
87	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>In Table 6-1 (Relevant NPSNN policies for the cultural heritage assessment) within paragraph 6.2.5, reference is made to paragraph 5.142 of the Relevant NPSNN. This refers to the 'treatment of yet undiscovered heritage assets with archaeological interest discovered during construction'. There should be a further box in this table which refers to identification, treatment and perhaps storage of undiscovered assets such as milestones and estate boundary markers. The A358 follows the 18<sup>th</sup> century turnpike trust, Hartrow to Ashill, and there may be undiscovered assets that are of importance and should be retained.</p>	National Highways has carried out a desk-based assessment of cultural heritage assets, which has included the identification of historic milestones and other markers, although the high-speed nature of the current road and existing vegetation has limited on-site assessment of survival. A worst-case assumption has been made within the ES (Document Reference 6.2), assuming that milestones and other markers are present and assessing impacts on them accordingly. Where they would be impacted by the scheme it is proposed that they will be recorded, removed under archaeological supervision, and stored before being reinstated as close to their original location as possible. Table 6-1 specifically relates to the contents of the National Policy Statement for National Networks (NPSNN) and so specific detail on milestones and other boundaries is not included.	N/A
88	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage) Built Heritage and Conservation</p> <p>(Figure 3.1 (Stage 2 Route Options))</p> <p>The map does not show whether the pink route is in fact 'the pink route' or the 'pink modified route'. This differentiation should be made clear.</p>	The map has been updated in the ES (Document Reference 6.2) to confirm the pink modified route as per the Preferred Route Announcement made by National highways in 2019. (See ES Figure 3.1, Document Reference 6.3)	N/A
89	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Conclusion to chapter 3</p> <p>It does not appear that great weight has been given to the protection of heritage assets in accordance with NPPF para 199. Although a considerable amount of work has been undertaken in assessing the impact on the heritage assets, it is not clear whether great weight was given to avoid harm. This must be considered and appropriately assessed in order to avoid the assertion that the process has not given due consideration to the NPPF.</p>	National Highways acknowledges the concern presented by SWT (as was) in relation to the NPPF. The ES, submitted within the DCO (Document Reference 6.2), provides details of the design review and development process and the ways in which harm to heritage assets has been minimised wherever possible. This is discussed within the discussion of embedded mitigation within Chapter 2 The project (Document Reference 6.2). Further detail on essential mitigation is included in Chapter 6 Cultural Heritage and supporting appendices (Document Reference 6.2 and 6.4).	N/A
90	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p>	National Highways acknowledge agreement from SWT (as was) on the heritage assets identified in the PEI Report included as part of the statutory	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>Chapter 2 (The Project)</p> <p>In chapter 2 of the PEIR, paragraphs 2.3.23 and 24 identify that there are 141 listed buildings within the 1 km zone of works, including four grade I buildings which are churches, 10 grade II buildings, 127 grade II buildings 10 of which are 100 km from the proposed scheme, and other registered assets including a grade II registered park and garden at Hatch Court and two conservation areas (both within the Somerset West and Taunton Council area), at Hatch Beauchamp, Thornfalcon. This is not disputed.</p>	consultation; these are also included within ES Chapter 6 Cultural heritage (Document Reference 6.2).	
91	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation Appendix 6.5 (Geophysical Survey Report)</p> <p>The Council considers that referencing could be improved here, to show the geophysical survey overlapping the OS maps.</p>	ES Appendix 6.5 Geophysical Survey Report (Document Reference 6.4) includes results overlaid on OS maps.	N/A
92	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Appendix 6.1 (Archaeological and Historical Background)</p> <p>In summary, the Council is of the opinion that it has not been demonstrated that 'great weight' has been given to the conservation of assets. Where proposals such as the impact on Musgrave farmhouse are being considered, there should be justification as to why this harm cannot be reasonable avoided and individual more detailed proposals to options around the asset to minimise harm.</p>	<p>Appendix 6.1 Archaeological and Historical Background of the ES Appendices (Document Reference 6.4) is concerned with baseline data and is not intended to describe the justification for a proposed element of the scheme.</p> <p>The route selection process is complete as outlined in the Preferred Route Announcement in June 2019. It should be noted that the preferred route choice was made on a range of considerations, including the environment, cost and buildability. Cultural heritage was one of the environmental disciplines considered.</p> <p>The purpose of the assessment in the ES (Document Reference 6.2) is to assess the potential environmental impacts which may arise from the preferred route. This includes a detailed assessment of impacts on cultural heritage.</p>	N/A
93	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Appendix 3.1 (Route Options)</p> <p>Pink option</p> <p>With the pink option, the text references that "This option has the potential for Significant Adverse environmental effects. However, it would have the least effect to ecology and landscape in comparison to the Blue and Orange options". Again, there is no consideration of the duty to consider impact upon heritage assets. The text goes on to state that "The construction of this option also has the potential have Large Adverse effect to the archaeological remains of a recorded Roman settlement and is anticipated to have a Large Adverse effect upon Grade II listed 'Musgrave Farmhouse and Outbuilding with wall adjoining south-east corner of Haydon House". With open countryside around it, no evidence has been given as to why the road will be so close to Musgrave farmhouse and divide the farmhouse from its barns. This is not helpful to the setting of the Grade II Listed Building and must therefore be a significant consideration.</p>	National Highways acknowledges these comments made in relation to route options and options appraisals undertaken in relation to the scheme. The assessment of alternatives is presented as ES Chapter 3 (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
94	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Appendix 6.1 (Archaeological and Historical Background)</p> <p>Paragraph 4.2.1 confirms that further work will be carried out to establish the impact on the heritage asset, Bath cottage. The Council supports this approach and strongly recommends that this is carried out.</p>	National Highways acknowledge support for the assessment methodology. Assessment of Bath Cottage is included in ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
95	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Appendix 6.3 (Gazetteer of Heritage Resources)</p> <p>This appendix refers to the significance of the asset and considers its setting. This should be done for all of the 392 heritage assets identified. It usefully considers that some assets are outside of the ZTV, most likely due to topography. It is considered that this appendix should start with an explanatory passage to explain how the sift has been considered. Some of the descriptive passages do not mention the A358 and some do. The gazetteer could usefully include the council district. The buildings should not just be described, but should also include the impact and justification of why they are at low to high risk as well as a photo. The Council believe that it would be useful to extend the table to include a photo. Once again, the Council must comment that the presentation of the information is made more difficult because it is separated between several documents on each building. A combined heritage document would be useful and helpful.</p>	National Highways acknowledge the comments provided by SWT (as was). The format and content of ES Appendix 6.3 Gazetteer of Heritage Resources (Document Reference 6.4) is in line with National Highways projects nationally. Additional introductory text has been included within the Appendix as submitted within the DCO and setting has been described for all heritage resources.	N/A
96	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Appendix 6.1 (Archaeological and Historical Background)</p> <p>Paragraph 4.1.3 of appendix 6.1 identifies that the study has considered both listed buildings and non-designated heritage assets and has also considered the ages of these buildings highlighting the number of medieval buildings in the study area of 1 kilometre for listed buildings and 250 metres for non-designated heritage assets. Given the higher number of medieval buildings in the area, the Council strongly urges that it would be advisable to increase the study area of the buffer zone to 1 kilometre for both listed and buildings and non-designated heritage assets.</p>	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
97	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Appendix 6.4 (Preliminary Impact assessment tables)</p>	National Highways acknowledges the complexity of presenting impacts on such a large number of heritage assets, in a way which is clear and easily understood. The Cultural Heritage chapter of the ES and its supporting appendices (Document Reference 6.2 and 6.4) present heritage assets by type of designation, and then numerically, to allow cross-referencing from the figures. In occasional circumstances, such as the specifically mentioned Hatch Court and Henlade House, this means the assessment includes	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>Table 1.1</p> <ul style="list-style-type: none"> <li>The table refers to the assessment of key buildings with a designation of temporary construction, permanent construction and operation which is reasonable. It is supported by written text only on the impact. A photographic record of impact on key views of the asset should be included to support the text. The table could also usefully say which authority an asset lies within.</li> <li>Where assets are highlighted it refers to existing screening of trees blocking views towards the new road, but it does not say on some entries whether they will permanently block views or are deciduous and will shed leaves, making the road visible during winter months.</li> <li>Where parkland is discussed, such as Hatch Court, this table does not highlight that it is also a registered park and garden and has only referred to the building as listed. The impact should be the views of the building and also the experience of the building. Noise would impact on the experience, so this should be included on an assessment of impact. Given this is a registered park and garden a deeper analysis of impact on the design would be more useful. A separate, later entry, refers to walls at Hatch Court rather than being grouped together which is misleading.</li> <li>The impact on Henlade House from the front of the building is highlighted, but it does not refer to the parkland being impacted, which is not registered but elsewhere has referred to a designed parkland. This needs to be corrected. The Park is referred to later on in the document instead of together which is more confusing. It does refer to a visual and noise impact and refers to this being in a different document. Given that the impact on heritage assets should be given 'great weight' and both visual and the experience should be considered, the Council would expect to see a conjoined document on the impact on the heritage assets, instead of considering noise and visual impact separately. There should also be a more in depth understanding on how the mitigation has been considered where the harm cannot be avoided.</li> <li>The realignment of the road brings it within 15 metres of Musgrave Farmhouse (Grade II listed) and within the farmyard. The justification for the realignment has not been discussed, nor whether it can be avoided or impact lessened. The document does not refer to whether this very close impact will have an adverse effect on the use and viability of the farmhouse. Key views should be considered for this building and a more detailed plan of the proposals given.</li> </ul> <p>In conclusion, Table 1.1 has a lack of justification and explanation on why harm to the assets cannot be avoided. The compilation of the document is made more difficult in that one asset can appear in parts in different sections.</p>	<p>multiple separate listed buildings, and designated or non-designated parkland. To address this, detailed cross-referencing has been added to the impact assessment tables in the ES submitted within the DCO and, where significant effects have been identified, a narrative description is included in ES Chapter 6 Cultural heritage (Document Reference 6.2).</p> <p>For consistency and quality, the Cultural Heritage chapter refers to the viewpoint photographs (winter and summer) produced for ES Chapter Landscape and visual effects (see ES Figure 7.7, Document Reference 6.3). The selection of representative viewpoints was developed in consultation with the heritage topic. The same approach has been taken for noise and vibration, but in both cases, the relevant details have been discussed in detail within the cultural heritage topic. Details of justification and mitigation are discussed within ES Chapter 6 Cultural heritage (Document Reference 6.2).</p>	
98	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>There are also Appendices and Figures which contain references to built heritage. The Council has the following comments to make in this regard.</p>	<p>ES Chapter 6 Cultural heritage and its associated figures and appendices are submitted within the DCO application. (Document Reference 6.2, 6.3 and 6.4).</p> <p>National Highways note comments raised in relation to weight given to cultural heritage within the assessment of alternatives. It should be noted that the preferred route choice was made on a range of considerations,</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>Appendix 3.1 (Route Options)</p> <p>Table 3.3</p> <p>All options were considered to have positive and negative impacts. The pink option was the cheapest option and performed better with less adverse landscape effects. Great weight should be given to the heritage assets conservation, in accordance with the provisions of the NPPF (as referenced above). It is not clear why the protection of landscape appears to outweigh protection of heritage assets. NPPF paragraph 200 states clearly that any harm to an asset requires clear and convincing justification. This chapter has not given convincing justification. Where harm is identified, other options should be considered.</p>	<p>including the environment, cost and buildability. Cultural heritage was one of the environmental disciplines considered. The assessment of alternatives is presented as ES Chapter 3 (Document Reference 6.2).</p> <p>The purpose of the assessment presented in the ES (Document Reference 6.2) is to assess the potential significant environmental effects which may arise from the preferred route. This includes a detailed assessment of impacts on cultural heritage (See ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)). The aims and objectives of the NPPF have been taken into account within ES Chapter 6 (Document Reference 6.2).</p>	
99	Somerset West and Taunton		<p>Comments on PEIR – Chapter 6 (Cultural Heritage) – Built Heritage and Conservation</p> <p>Appendix 7.2 (Visual Baseline)</p> <p>Table 1.1 is a descriptive text for the visual baseline. However, the Council considers that the methodology should be changed so that the table is interspersed with photographs.</p>	<p>National Highways has individually assessed the contribution made to each asset by its setting, following the Historic England Setting of Heritage Assets guidance. This is reported on within the Environmental Statement (Chapter 6: Cultural Heritage and supporting appendices (Document reference 6.2 and 6.4).</p>	N/A
100	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Appendix 7.4 (Accurate Visual Representation Methodology)</p> <p>This appendix describes viewpoints but does not include a series of photos to show these key views. The information relates to general views. This should be corrected. In assessment of harm to heritage assets, key views should always be provided.</p>	<p>Representative viewpoint photographs are provided on Figure 7.7 Viewpoint Photographs (Document Reference 6.3) and are presented to a size and format in accordance with relevant guidelines and standards. Consideration of heritage assets has been taken into account in the selection of representative viewpoints.</p> <p>The assessment of views has been considered within both ES Chapter 7 Landscape and visual effects and within ES Chapter 6 Cultural heritage in terms of the impact on the setting of heritage assets. (see Document Reference 6.2)</p>	N/A
101	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 6 (Cultural Heritage)</p> <p>Paragraph 6.6.4 refers to 196 listed buildings having been considered, many of which were considered for potentially being impacted due to high visibility or significant noise change. However, the study should outline how the setting has been considered for each of the buildings. Key views and site lines to the designated assets should be clearly defined.</p>	<p>National Highways has individually assessed the contribution made to each asset by its setting, following the Historic England Setting of Heritage Assets guidance. This is reported on within the Environmental Statement (Chapter 6: Cultural Heritage and supporting appendices (Document reference 6.2 and 6.4).</p>	N/A
102	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 6 (Cultural Heritage)</p> <p>Cultural Heritage is split into two distinct areas of concern from the Council's perspective--</p> <ul style="list-style-type: none"> <li>• Archaeology, and</li> <li>• The built environment and conservation.</li> </ul> <p>This chapter of the PEIR will therefore be looked at under these two headings. In both instances though, there are other references in other chapters that need to be highlighted.</p>	<p>National Highways acknowledge the scope of the review of the PEI Report.</p>	N/A

103	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Figure 6.2 (Non Designated Heritage Assets, sheets 1, 2, 3 and 4)</p> <ul style="list-style-type: none"> <li>• The maps could usefully show the impact on non-designated heritage assets, which could include historic parkland around designated heritage assets at 1 kilometre instead of 250 metres. It could also show where all of these parklands are together.</li> <li>• The maps only show reference numbers to the non-designated heritage assets and could include a legend to show the name of the asset on each map</li> <li>• The maps have been oriented so that they are not on a north south axis so they are more difficult to compare to data bases that are on that axis.</li> </ul>	<p>Figures for the cultural heritage assessment (Document Reference 6.3) show both designated and non-designated sites and follow a specific format, used by all disciplines for consistency. The orientation of the maps is aligned to follow the route of the A358 and is consistent with other documentation produced for the DCO and ES (Document Reference 6.2).</p>	N/A
104	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage)-- Built Heritage and Conservation</p> <p>Chapter 2 (The Project)</p> <p>Paragraph 2.8.2 identifies that the proposals would include demolition of Henlade farmhouse, Meadow view and Bath Cottage. There is no apparent heritage impact to demolition of these properties.</p>	<p>National Highways has carried out a heritage assessment to identify buildings of heritage interest and significance impacted by the scheme. The impacts of these are reported within the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4). Bath Cottage is considered to be a non-designated heritage resource, however Henlade farmhouse and Meadow View are not.</p>	N/A
105	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage)-- Overall Conclusions to consideration of Heritage Assets</p> <p>Some of the maps can be improved through clearly identifying the proposed routes with existing routes. Further work should be carried out to justify the option chosen, particularly where the option cannot be adjusted to avoid or minimise harm to some of the assets mentioned.</p>	<p>The cultural heritage ES figures (Document Reference 6.3) show only the scheme that will be submitted for DCO.</p> <p>ES Chapter 3 Assessment of alternatives presents details with regard to the selection of route options and the preferred option which is the basis of the Environmental Impact Assessment (EIA) presented in the Environmental Statement (Document Reference 6.2).</p>	N/A
106	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage)-- Overall Conclusions to consideration of Heritage Assets</p> <p>The buffer zone should be increased for non-designated heritage assets from 250 metres to 1 kilometre and more detailed assessments should be carried out for the individual designated assets highlighted where harm is likely to occur.</p>	<p>National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).</p>	N/A
107	Somerset West and Taunton		<p>Comments on PIER-- Chapter 6 (Cultural Heritage) Overall Conclusions to consideration of Heritage Assets</p> <p>The starting point for consideration of heritage assets has to be the Listed Building and Conservation Areas Act. This states that "In considering whether to grant planning permission, or permission in principle, for development which affects a listed building or its setting, the Local Planning Authority or, as the case may be, the Secretary of State, shall have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses". With respect to Conservation Areas, the</p>	<p>Chapter 6 Cultural heritage of the ES (Document Reference 6.2), submitted with the DCO application, includes an assessment of listed buildings and conservation areas.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Act states that “In the exercise, with respect to any buildings or other land in a conservation area, of any functions under, or by virtue of, any of the provisions mentioned in subsection (2), special attention shall be paid to the desirability of preserving or enhancing the character or appearance of that area”. It is clear that “great weight” should be given to the asset’s conservation and the setting of designated assets should be preserved. Special attention should be given to the preservation of conservation areas.		
108	Somerset West and Taunton		Comments on PIER-- Chapter 6 (Cultural Heritage)-- Overall Conclusions to consideration of Heritage Assets  Although a considerable amount of work has been undertaken, it is made difficult to read through its presentation because the information has been scattered throughout the documents. This could be accumulated into one document.	National Highways acknowledges this challenge. Given the scale of the cultural heritage topic, it is necessary to present it within a series of linked documents. However, National Highways acknowledges the potential for confusion, and the ES (Document Reference 6.2) submitted with the DCO has been updated to include more overview within ES Chapter 6 Cultural heritage (Document Reference 6.2) and detailed cross-referencing.	N/A
109	Somerset West and Taunton		Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).  Efforts must be made to minimise the damage to the woods alongside the existing A358 near to Griffin Lane. Many of the affected trees will be relatively recently planted roadside trees.	The woods highlighted alongside the existing A358 near to Griffin Lane will be protected and avoided where possible through design development where engineering requirements/constraints allow.  Significant efforts have been made to revise the scheme design and reduce the loss of woodland along the A358 near to Griffin Lane. This reduction in land take to construct the scheme can be seen when comparing the general arrangement plans presented alongside the PEI Report at statutory consultation to those presented alongside the ES (Document Reference 6.2).	N/A
110	Somerset West and Taunton		Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Baseline Evidence  The document set up a detailed review of the relevant National Policy Statement for National Networks (NPSNN) policies for the landscape and visual assessment, including a brief of the relevant police and wherein the PEI Report the information to address this policy appears.  In addition to the NPSNN policies, the PEI Report has considered other relevant policies or documents in relation to the landscape and visual impacts. These include national policy, local policy, and supplementary guidance. Local relevant documents and reports that are missing which should be reviewed concerning landscape assessment and views, are as follows:  <ul style="list-style-type: none"> <li>• Taunton Deane Green Infrastructure Opportunities Update (2017)</li> <li>• Landscape Character Assessment of Taunton’s Rural-Urban Fringe</li> <li>• Taunton Deane Borough Council (2014) Landscape Assessment of the Borough’s Special Landscape Features Taunton: Connecting Our Garden Town (2017)</li> <li>• Taunton Deane Borough Council (2015) Taunton Deane Green Wedge Assessment June 2015</li> <li>• CFP (2014) Taunton Deane Green Space Strategy</li> </ul>	Relevant local plan and national policy documents referenced in the PEI Report, have also been referenced and reviewed in ES Chapter 7 Landscape and visual effects (Document Reference 6.2).  With regards to each document noted:  <ul style="list-style-type: none"> <li>• Taunton Deane Green Infrastructure Opportunities Update (2017) – Not referenced directly, as the Evidence Base for Adopted Local Plans only referenced the Taunton Deane Green Infrastructure Strategy (2009). On review, the Update does not change the context of the Strategy/Opportunities in relation to the scheme,</li> <li>• Landscape Character Assessment of Taunton’s Rural-Urban Fringe (2005) – The Taunton Deane Landscape Character Assessment (2011) has been referenced as a more recent document.</li> <li>• Taunton Deane Borough Council (2014) Landscape Assessment of the Borough’s Special Landscape Features Taunton: Connecting Our Garden Town (2017) – This was considered in relation to the North Curry Ridge and Thorn Clump.</li> <li>• Taunton Deane Borough Council (2015) Taunton Deane Green Wedge Assessment June 2015 – The scheme would not impact any Green Wedges and therefore this document is not referenced.</li> <li>• CFP (2014) Taunton Deane Green Space Strategy-- The scheme would not impact any Green Spaces and therefore this document is not referenced. Visual impacts for receptors using green spaces have been considered where appropriate.</li> </ul>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<ul style="list-style-type: none"> <li>Taunton Deane Borough Council (2011) Taunton Deane Landscape Character Assessment.</li> </ul> <p>These must be referenced and reviewed as part of the information to be submitted with the PEIR and the subsequent Environmental Statement.</p>	<ul style="list-style-type: none"> <li>Taunton Deane Borough Council (2011) Taunton Deane Landscape Character Assessment – This has been referenced throughout Chapter 7 and forms the basis for landscape baseline and assessment of the scheme.</li> </ul>	
111	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- General Overview</p> <p>The scheme proposes to upgrade the A358 to a dual carriageway between Southfields Roundabout on the A303 and the M5 at Taunton. The project is part of a longer-term aim to create a high-quality link between London and the South East and the South West. The current A358 is predominantly a single lane and has many local roads joining directly to it. Widening this part of the route (13.5 km / 8.5 miles long) to a dual carriageway will significantly impact cyclists, horse riders, and pedestrians. A project of this scale has a significant impact on the local landscape, its character and biodiversity and views from a short and long distance.</p>	Impacts on the local landscape, its character and views from a short and long distance including Public Rights of Way (PRoW) have been provided within ES Chapter 7 Landscape and visual effects (Document Reference 6.2), including selected viewpoints from PRoW (see ES Figure 7.7 Viewpoint Photographs (Document Reference 6.3)).	N/A
112	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- General Overview</p> <p>Somerset West and Taunton landscapes are considerably diverse. The proposed A358 scheme passes Northeast to Blackdown Hills AONB National Character Area 147 (NCA 147) and through three NCA's. The majority of the project passes through the west part of NCA 143, Mid Somerset Hills. The south part of the scheme passes through NCA 140, Yeovil Scarplands and at its north edge NCA 146, Vale of Taunton and Quantock Fringes. The proposed scheme will significantly affect the rural landscape and views of the area.</p> <p>According to the 'A358 Taunton to Southfields Scoping Report', the proposed scheme has only been assessed against NCA 143. Due to the sensitivity of the area, its size, length, and impact on the landscape. It is recommended that the scheme must also be assessed against all relevant NCA's – including NCA 140, 146 &amp; 147.</p>	<p>The landscape impacts of the scheme have been assessed in accordance with the methodology within, and feedback to, the Scoping Report. The scope of EIA assessment should be limited to those aspects of the environment that are likely to be significantly affected.</p> <p>NCA 140 includes the existing A358 north of Southfields Roundabout, and the NCA also includes other major road corridors, it is unlikely that the nature of the change would have the potential to result in significant landscape impacts on NCA 140.</p> <p>NCA 146 includes the existing A358 south of M5 J22, and the NCA also includes other major road corridors, it is unlikely that the nature of the change would have the potential to result in significant landscape impacts on NCA 146.</p> <p>NCA 147 is physically separate from the scheme by approximately 1.5 km plus, it is unlikely that the nature of the change would have the potential to result in significant landscape impacts on NCA 140, impacts on views are considered in the visual assessment.</p>	N/A
113	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments</p> <p>The Document References the two long-distance footpaths that pass through the proposed A358-- East Deane Way and Neroche Herepath. However, it lacks reference to other short and circular paths within the scheme boundary buffer and the Blackdown Hills AONB. A map with the existing footpaths is required to understand the effect A358 might have.</p>	From a landscape and visual perspective, PRoW, bridleways, cycle tracks, byways and the national cycle network are shown on ES Figure 7.2 (Document Reference 6.2) and have been considered by ES Chapter 7 Landscape and visual effects including selected viewpoints from PRoW (see Document Reference 6.2 and 6.3).	N/A
114	Somerset West and Taunton		<p>Comments on PEIR - Chapter 7 (Landscape) - Assessment Methodology</p> <p>The proposed scheme effects were assessed against criteria adapted from DMRB LA 107 Landscape and visual effects:</p> <ul style="list-style-type: none"> <li>Landscape sensitivity (susceptibility and value) of receptor / resource</li> <li>The magnitude of effects on the landscape</li> <li>The visual sensitivity of receptors/resource</li> <li>The magnitude of visual effect</li> <li>The significance of effects</li> </ul>	National Highways welcome support for the methodology proposed.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<ul style="list-style-type: none"> <li>• Significance Matrix that report the magnitude of impact (degree of change)</li> </ul> <p>The PEI report provides a clear and detailed description for the landscape evaluation for each of these criteria. No further expansion or description is therefore required.</p>		
115	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>The methodology used to photograph the site described in the report includes using a full-frame sensor camera with a 50 mm fixed focal length lens mounted on a tripod at the height of 1.5 m. Photographs have been captured as a single-shot apart to few views which captured as panoramic.</p> <p>To represent the project's scale, appearance, context, form, and extent, in the most reliable way, images should also include the source of camera/viewpoint location using LiDAR, GNSS, or measured/topographic surveys. When capturing panoramas, a panoramic head is necessary.</p>	Photographs have been recorded and presented in accordance with relevant guidance for the purpose they are intended. Camera locations for photomontages have been recorded using topographic survey. All photographs are single shot in accordance with the methodology and Scoping Report.	N/A
116	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>The project methodology is generally comprehensive and allows to assess the scheme's impact on receptors. The methodology is based on a few stages, including:</p> <ul style="list-style-type: none"> <li>• A description of the effects that the scheme might have on receptors</li> <li>• Identifying essential mitigations required for landscape and visual</li> <li>• Combining the mitigation measures into the proposed scheme.</li> </ul>	National Highways welcome support for methodology proposed.	N/A
117	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>Visualisation and night photography will be prepared to show year 1 and year 15 scenarios in both summer and winter. 7 locations for visualisation and night photography locations proposed in the report:</p> <ul style="list-style-type: none"> <li>• Viewpoint 2 (Stoke Hill)</li> <li>• Viewpoint 5 (Thorn Hill)</li> <li>• Viewpoint 7 (south-west of Mattocks Tree Green)</li> <li>• Viewpoint 13 (Hatch Green)</li> <li>• Viewpoint 27 (Park Barn Lane)</li> <li>• Viewpoint 23 (Ashill)</li> <li>• Viewpoint 36 (Staple Hill)</li> </ul> <p>The proposed locations for Visualisation and night photography represent most of the sensitive points throughout the project and can help estimate the project's impact on the landscape. However, due to the rural characteristics of the landscape and distant views from</p>	The locations proposed for visualisation and night photography are considered proportionate and representative of the range of locations and types of view and potential impacts. No lighting is proposed along the scheme, other than on approach to the Nexus 25 and Southfields junctions. Modifications to existing lighting on local roads will also be required where the scheme proposals affect these, for example at Stoke Road. Consultation on viewpoints during selection was undertaken, including feedback from the Blackdown Hills AONB.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>Blackdown Hills AONB few additional Visualisation and night photography should be considered:</p> <ul style="list-style-type: none"> <li>• Viewpoint 14, from Bickenhall Farm towards Bickenhall Lane bridge. The project proposes to create elevated embankments to carry a road bridge over the A358. Due to Bickenhall Lane bridge height, the bridge structure and its embankments might have a significant effect on receptors from adjacent and afar pRoW's as well as visual receptors within the study area.</li> <li>• Due to Blackdown Hills AONB sensitivity, additional views from this area should be considered. Views 33/34 from Castle Neroche forest are located at a high point and include a circular walking route, several public footpaths and bridleway. The view should direct east towards Ashill junction.</li> <li>• And viewpoint 40, also located within the Blackdown Hills AONB. A relatively high area is adjacent to Murlinch Ancient Woodland, Feltham and nearby public footpath and Byway.</li> </ul>		
118	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>Most of the selected views are within the 1 km site buffer, with 12 views located outside of the boundary. Due to the unique rural landscape character and the high topography around the site, additional views from the following far elevated key points should be considered:</p> <ul style="list-style-type: none"> <li>• Stoke hill north towards the A358 route. Stoke hill is within the Blackdown Hills Limestone scrap local character area and parts Stoke Wood ancient woodland. The high topography of the area, the change in the landscape and the adjacent ancient woodland make it a strategic view that should be considered.</li> <li>• Crimson hill, at a similar location to view 17 but in a different direction. Crimson hill is located within a local character area and north of Hatch Beauchamp park (Grade II listed). The view direction should face to the north over Hatch Beauchamp park (Grade II listed) towards the A358 scheme.</li> <li>• Abbey hill, although this point is from afar, Abbey hill is located on the north edge of Blackdown Hills AONB and adjacent to Castle Neroche and Middleroom Wood. Visual receptors from pRoW's and footpaths might be affected mainly due to the high point of this area.</li> <li>• Buckland hill, a high point located within Blackdown Hills AONB. This a sensitive viewpoint due to the elevated nature of the area and the surrounding woodland. The effects of the proposed scheme on receptors and the landscape should be examined.</li> </ul>	<p>Photography from Stoke Hill has been presented in ES Chapter 7 Landscape and visual effects as Viewpoint 6 (see Document Reference 6.2 and 6.3).</p> <p>A view north from near PEI Report Viewpoint 17 would be away from A358 and Hatch Beauchamp Park, however. The view suggested across Hatch Beauchamp Park towards the A358 and the scheme does not exist from this viewpoint due to the presence of hedgerows and landform from publicly accessible areas in that location. This is reported in the ES as Viewpoint 26.</p> <p>ES Viewpoint 20 has been added from Crimson Hill looking west.</p> <p>Abbey Hill, PEI Report Viewpoints 33, 34 and 39 are now ES Viewpoints 60, 61 and 62 respectively and provide representative views from the vicinity of Abbey Hill, Castle Neroche and Middleroom Wood.</p> <p>There are no views towards the scheme from Buckland Hill due to intervening vegetation and topography, however ES Viewpoints 63, 64 and 65 have been added to the north and east of Buckland Hill in the vicinity of Castle Farm, Hare and Ham.</p>	N/A
119	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>A Zone of theoretical visibility has been prepared for the site. A 3D model of existing topography with a resolution of 2m (one high point captured each 2m distance). The modal has been used to calculate areas from which the proposed scheme will be seen.</p>	National Highways welcome support for the methodology proposed.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
120	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>The baseline studies for the project are based on a combination of desk study, digital analysis, preparation of a Zone of Theoretical Visibility (3d model), site visits (at winter, day, and night) and discussions with stakeholders. Based on these, several maps were prepared which describes the existing area.</p>		N/A
121	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Assessment Methodology</p> <p>The presented baseline study is comprehensive and clear. However, the site assessment should be carried out throughout all sessions of the year, including spring, fall and summer, to get a robust understanding of the existing landscape.</p>	ES Chapter 7 Landscape and visual effects (Document Reference 6.2) note where the baseline context or impacts differs in summer and winter, in accordance with referenced assessment guidance by National Highways and the Landscape Institute. Photographs are presented in summer and winter months for each viewpoint.	N/A
122	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- General Overview</p> <p>There is an extensive network of public rights of way (pRoW) throughout the area, including long and short distance paths. Much of the pRoW network links between the different settlements and the settlements to the countryside. Widening the A358 to a dual carriageway may harm pedestrian and cyclist's connectivity in the local area. However, a combination of cyclist/pedestrian's paths adjacent to the road, for all or part of the scheme, and maximizing the number of North-South connections, can encourage cycling or walking and reduce short-distance car travel.</p>	The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. Opportunities to provide linear paths and crossings are maximised whilst recognising environmental, engineering and budget constraints.	N/A
123	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments</p> <p>The planned crossing within the scheme harms pedestrians and cyclists and divides Nexus 25 from the Gateway Park and Ride facility. The A358 project is an opportunity to improve these links and to connect to the city pedestrians and bike infrastructure.</p>	The scheme includes crossing facilities between Nexus 25 and Taunton Gateway Park and Ride and also retains existing crossing facilities near M5 junction 25.	Yes
124	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments</p> <p>It is clear from the information so far available that a prominent feature for the A358 scheme will be the extensive use of noise barriers along its length due to sensitive receptors either side and the lack of available material to form bunds. This could be a concern for the 'setting' of heritage assets, but of greater concern would be their visual appearance from the road and within the landscape in general. In particular, the potential to support graffiti and the impact this would have on the road users' impression of the area and of Somerset (for local residents and for potential visitors and investors). Graffiti on the timber acoustic barriers along the Tiverton bypass for example and those on the M5 boundary to the new Bridgwater Hospital, demonstrates what a harmful impact it can have visually, and also the irresistible canvas a noise barrier presents for graffiti and other forms of vandalism. This needs to be pointed out at this stage so that National Highways has the opportunity to consider alternative solutions. The Council would be grateful if National Highways could take on board the following related points –</p> <ul style="list-style-type: none"> <li>• The character of the new road scheme will be important for road users' impression of Somerset and of the local area, including potential tourist and investors, and local people's wellbeing and sense of place.</li> </ul>	<p>ES Chapter 7 Landscape and visual effects presents the assessment of the landscape and visual impact assessment for the construction stage and operational stage. This includes representative viewpoints from the opening year and 15 years after opening following the establishment of mitigation.</p> <p>The landscape and visual impacts of any bunds or barriers have been assessed within the ES Chapter 7 Landscape and visual effects, while the consideration of effects on the setting of heritage assets has been considered within Chapter 6 Cultural heritage (Document Reference 6.2). The appearance and specification of noise barriers will be developed during detailed design, subject to successful DCO consent. The extent of noise barriers is shown on the ES Figure 7.8 Environmental Masterplans (Document Reference 6.3).</p> <p>With regards to the noise barriers being targeted for graffiti, access to the roadside of these barriers will be limited by secure doors that form part of the barriers. Access to the roadside of these barriers will otherwise be unsafe which should act as a natural deterrent in most-cases.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<ul style="list-style-type: none"> <li>The extent and design of the noise barriers will be an important part of the scheme design, including its susceptibility to graffiti and its harmful impact. There appears to be no mention of this element of the road scheme design in the PEIR.</li> <li>Additional viewpoints for the road corridor as receptors will be needed within the Environmental Statement to adequately confirm the suitability (or otherwise) of the proposed noise barriers (if still proposed).</li> <li>There will be a need to confirm the detailed design of any noise barrier as part of the scheme presented in the Environmental Statement, rather than considered at the detailed design stage in the Requirements. The thinking is that we need to agree an acceptable design for the EIA, which would then be the worst-case scenario for the baseline condition.</li> </ul>		
125	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments</p> <p>The proposed Bickenhall Lane bridge over the A358 is located east of Bickenhall Ancient Woodland. The embankments and structures associated with Bickenhall Lane will be noticeable and might have an impact on the adjacent ancient woodland and the rural landscape from near and far views. These should therefore be avoided wherever possible, with alternative solutions found.</p>	<p>ES Chapter 7 Landscape and visual effects presents the assessment of the landscape and visual impact assessment for the construction stage and operational stage. This includes representative viewpoints from the opening year and 15 years after opening following the establishment of mitigation.</p> <p>Environmental mitigation measures in the form of slackened earthworks, position of the overbridge abutments, and use of mitigation planting have been proposed to reduce potential impacts and integrate the bridge into the rural landscape. As a result of mitigation measures, there would be no significant visual impacts arising from Bickenhall Lane overbridge at year 15.</p> <p>The Bickenhall Lane bridge has been relocated approximately 165m south of the ancient woodland so as to avoid direct impacts upon the ancient woodland. Through discussion with Natural England an access track off the Bickenhall Lane bridge has been designed to avoid significant impacts upon the ancient woodland, details of which are provided within the ES (Document Reference 6.2).</p>	Yes
126	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments</p> <p>The A358 scheme partitions key pedestrian and cyclist corridors. North of the scheme located Silk Mills Park and Ride and a National Cycle Route that runs along the Bridgwater and Taunton canal. And south of the project is Nexus 25, one of the city strategic employment centres.</p>	<p>Existing pedestrian connectivity would be maintained at Nexus 25 including new linear paths on both sides of the scheme to Stoke Road. The offline cycle route is based on the existing A358, maintains the existing connections to Nexus 25 and coincides with National Cycle Network Route 33 in Hatch Beauchamp.</p>	No
127	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 8 (Biodiversity)-- Biodiversity Net Gain</p> <p>It is noted that the Environment Bill has finally passed into law, with Royal Assent being granted on Tuesday 9<sup>th</sup> November 2021. Amongst other matters, this Bill now makes a 10% Biodiversity Net Gain a legal requirement for new developments. There is also a legal target to stop wildlife decline by 2030 and new legal targets to tackle water pollution. The Council will be looking to see in the coming months, how National Highways interpret and implement this new Environment Bill in the context of their proposals for the new road.</p>	<p>The Environment Act 2021 became law in November 2021. However, the obligation for Nationally Significant Infrastructure Projects (NSIPs) to deliver an increase of at least 10% biodiversity value is not expected to come into force until November 2025. Defra is developing a draft biodiversity gain statement, which will set out the detail of the biodiversity net gain objective and requirements for NSIPs.</p> <p>Due to the timing of the DCO application for the scheme, it is anticipated that the requirement to meet the biodiversity net gain objective will not apply to the determination of the application and the mechanism to secure land for the purposes of delivering net gain will not be in place. As a result, the scheme instead seeks to maximise biodiversity through essential mitigation requirements for delivery in accordance with current statutory and policy requirements.</p> <p>A high-level quantification of the level of biodiversity that would be lost due to the scheme, and the additional biodiversity resource provided by the habitat creation/enhancement included within the scheme, has been undertaken using Defra metric version 3.1, and is detailed within the</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				Biodiversity Metric Report, included in ES Appendix 8.6 (Document Reference 6.4).  This matter is discussed in the Statement of Common Ground with Somerset Council (Statement of Commonality Document Reference 7.1).	
128	Somerset West and Taunton		Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments  For similar reasons, confirmation on the detailed design and facing materials for the bridge designs are considered visually important enough to agree at this stage.	Confirmation of materials for the bridge designs will be developed further in detailed design, the approach would be in accordance with the Aesthetic Design Guide document.	N/A
129	Somerset West and Taunton		Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments  In addition to this, the 'Taunton Deane Green Infrastructure Opportunities' Report (2017) identified this area as a key project to deliver a new cycle/pedestrian link between Taunton centre and east Taunton to Blackbrook canal and the countryside beyond.	The scheme would not affect the pedestrian/cyclist links at M5 junction 25 and retains the connectivity at the Nexus 25 junction.	N/A
130	Somerset West and Taunton		Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments  J25 junction is a significant barrier for people walking and cycling to Taunton city centre from the Gateway Park and Ride. The project is an opportunity to improve the connection between the Taunton city centre and the Park and Ride facility by creating a safer infrastructure for pedestrians and cyclists.	The walking/cycling infrastructure at M5 junction 25 is newly built and improvements are beyond the scope of the A358 scheme.	No
131	Somerset West and Taunton		Comments on PEIR-- Chapter 7 (Landscape)-- Landscape Comments  Given the phosphates crisis on the Somerset West and Taunton area, attenuation ponds adjacent to the A358 can be used and designed to remove pollutants using natural base solutions such Integrated Constructed Wetlands (ICW's) and help in the efforts to remove phosphates from watercourses.	National Highways are aware of the Biodiversity Emergency issued by the Somerset Councils (as were) following advice issued by Natural England that the Somerset Levels and Moors SPA and Ramsar site is in unfavourable conditions primarily due to phosphate levels in surface water. In response, Somerset Council is considering phosphate emissions from developments given within planning applications, primarily developments such as residential, agricultural and commercial developments. Road developments are not considered significant sources of phosphates. However, we have considered the potential impacts of phosphates from the scheme on designated sites and have reported the results (no significant effects) of this assessment in the Habitats Regulations Assessment – Screening and Statement to Inform Appropriate Assessment (Document Reference 6.5).  The scheme is also looking to enhance sections of watercourse to provide additional vegetation and aquatic regime variation which will help maintain integrity of these systems and in some ways provide watercourses with resilience against elevated phosphate levels.	N/A
132	Somerset West and Taunton		Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).  It is noted that the proposals include a significant amount of near or off-site tree and hedgerow planting. These are shown on Figure 7.8, which has 9 associated sheets. Whether this amount and position for such planting proves to be appropriate and of enough quantity, is something that cannot as yet be judged. Also, it is noted that the proposals do not appear to provide for any longer distance planting, which could be useful for screening visual impacts and/or providing noise barriers. It is suggested that this is a serious omission. The PEIR does not appear to have an overall map/plan showing proposed tree/hedgerow losses and replacement planting, which would be helpful. So, the Council will need	The proposed environmental mitigation measures respond to identified impacts arising from the scheme. Where deemed to be required and proportionate, land away from the footprint has been identified, for example hedgerow planting/improvements perpendicular to the carriageway for visual screening and habitat connectivity. Impacts on trees are quantified in the Tree Survey and Arboricultural Impact Assessment report as part of the ES (Document Reference 6.4, Appendix 7.3).  Following statutory consultation, the environmental scheme design has further developed to incorporate 'offsite' habitat creation areas further away from the scheme. The proposed location of these areas has been influenced by the results of ecological surveys undertaken throughout 2021; for example, establishing areas of woodland in offsite locations near to identified woodland bat species maternity colonies, and utilising offsite	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			to reserve judgement on the suitability and acceptability of the planting proposals.	hedgerow creation or hedgerow improvement to create ecological dispersal corridors between areas of semi-natural habitats within the landscape along the scheme. The details of these areas of habitat creation are shown on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3) and detailed within the ES within Chapter 2 The project and Chapter 8 Biodiversity (Document Reference 6.2).	
133	Somerset West and Taunton		Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).  It is noted that detailed Tree Surveys and Arboricultural Impact Assessments are currently being undertaken. So, the Council will comment in more detail when it has had the opportunity to see these at a later stage. The initial Tree Constraints are however noted.	The Arboricultural Impact Assessment and Tree Surveys are presented in ES Appendix 7.3 (Document Reference 6.4).	N/A
134	Somerset West and Taunton		Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).  There are other areas of ancient woodland within a kilometre of the road or considerably less (Stoke Wood, Huish Wood), the species, wildlife and habitats of which may be indirectly affected by the road being nearer and wider. This will need careful analysis by ecologists.	The PEI Report detailed initial results of ecological surveys and an indication of the anticipated impacts of the proposed scheme at that stage within the design process. An extensive suite of ecological surveys (habitats and species) has since been completed, the results of which have informed the scheme design, with measures taken to avoid and reduce impacts where possible. The ES Chapter 8 Biodiversity and its supporting appendices (Document Reference 6.2 and 6.4) details the results of these surveys, an assessment of the impact of the scheme and measures to mitigate these impacts. This includes an assessment of potential impacts upon ancient woodlands via changes in air quality associated with construction and operation of the scheme.	N/A
135	Somerset West and Taunton		Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).  The new road will pass in very close proximity to one area of ancient woodland near to Bickenhall, recorded as 'ancient re-planted' woodland. Chapter 7, paragraph  7.9.18 of the PEIR states that 'The proposed scheme will avoid impact on Bickenhall ancient woodland' by widening to the east. This is also reiterated in chapter 16 (summary), Table 16-1 (Summary of preliminary assessment of likely significant environmental effects), which makes quite clear that there is expected to be an 'adverse significant effect on Bickenhall Wood ancient woodland due to vehicular related nitrogen deposition causing potential for habitat degradation'. It is essential that no more 'ancient woodland' is lost. The Council will be looking to ensure that no more ancient woodland is lost as the proposed scheme progresses and evolves. Ancient woodland is an irreplaceable habitat as the chapter acknowledges.	The scheme alignment has been designed to avoid this woodland and other ancient woodlands across the scheme. Bickenhall Lane bridge has been relocated approximately 165m south of the ancient woodland so as to avoid direct impacts upon the ancient woodland. Following discussion with Natural England an access track off the Bickenhall Lane bridge has been designed to avoid significant impacts upon the ancient woodland, details of which are provided within the ES. Other areas of existing woodland have been retained or protected where possible or minimised through design. Where these woodlands are located adjacent to construction areas, appropriate buffers would be established (including a 15m buffer between area of works and woodland edge) and fencing utilised to maintain root protection zones as detailed within the Tree Survey and Arboricultural Impact Assessment Report presented as ES Appendix 7.3 (Document Reference 6.4).  ES Chapter 8 Biodiversity (Document Reference 6.2) details the potential for nitrogen deposition related degradation within Bickenhall Wood; measures to compensate for any degradation include additional woodland planting to the north and south of this woodland and the introduction of management for biodiversity within areas previously inaccessible for Forestry England to manage.	N/A
136	Somerset West and Taunton		Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).  It is inevitable that a scheme such as this will result in the loss of trees and hedgerows. Looking at the current proposed route, it does appear that efforts have been made to minimise these losses. However, the numbers of potential losses are still considerable. As indicated in the Initial Constraints document, it is accepted that many of these losses will be relatively young roadside trees where the existing route is to be	The Tree Survey and Arboricultural Impact Assessment is presented in ES Appendix 7.3 (Document Reference 6.4).  It is agreed that the majority of tree losses are relatively young roadside trees alongside the A358. Efforts have been made to amend the engineering design to reduce the land take, and associated habitat loss, throughout the scheme wherever practicable. For example, as a result of highway design changes there has been a significant reduction in the loss of woodland through the Hatch Park area compared to the design presented at statutory consultation.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			widened and new bridges and junctions built, or smaller hedgerow species such as hawthorn.	It should be noted that National Highways have developed a scheme design which includes extensive areas of hedgerow and woodland habitat creation and enhancement. The translocation of trees and hedgerows is also proposed in key locations within the scheme. These locations and detailed strategies for the successful implementation of this habitat creation and enhancement are included within the Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4) Annex D Landscape and Ecological Management Plan and supporting ES Appendix 8.24 Ecological Mitigation Strategy – Habitats (Document Reference 6.4).	
137	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>The tree losses referenced causes the Council some concern. The proposals will inevitably have environmental impact through the loss of trees. If National Highways does concludes that tree loss is unavoidable and therefore acceptable, the Council strongly urges that minimum replacement planting ratios should be stipulated, seeking at least three new trees to be planted (located as close to the original location as possible), for every tree removed. Such replanting should be of native species in keeping with the character of the landscape in each location and should be undertaken within the next available planting season after the works have finished. This must be accompanied by a standard condition specifying that within a period of 5 years from the completion of the proposed works, any replacement tree or hedge that dies, is removed or becomes seriously damaged or diseased, shall be replaced in the next available planting season with others of similar size and species.</p>	<p>The environmental mitigation presented on ES Figure 7.8 Environmental Masterplan (Document Reference 6.3) details how lost trees and vegetation will be mitigated. Areas of tree, woodland, screening, planting and hedgerows with trees are proposed in locations where they are deemed to be required and most effective in mitigating impacts, however numbers of proposed trees are not quantified at this stage of design as the mixes, densities, and layouts will be developed at the detailed design stage, subject to successful DCO consent.</p> <p>National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow and woodland habitat creation, as well as new water channels and ponds. All new planting would use native species that reflect the species composition of those habitats lost to the construction of the scheme and those of greatest wildlife benefit. Habitat creation areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358. The translocation of trees and hedgerows is also proposed in key locations within the scheme. These locations and detailed strategies for the successful implementation of the translocations are included within the Environmental Management Plan (Document Reference 6.4 Appendix 2.1).</p> <p>A requirement will be part of the draft DCO submitted with the application, this will require the submission and approval of a detailed landscaping scheme which the local planning authority and local highway authority would be consulted on.</p>	N/A
138	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>There are very few TPO trees along the route that are close enough to be potentially directly impacted. The presence of TPO-- TD629 has been recorded in the PEIR (two oaks close to the junction of Bickenhall Lane and the existing A358), but it does not seem to be shown on the plan. I think that the trees have now been surrounded by more recent planting, but the older protected oaks should be retained and protected.</p>	The plans for each Tree Preservation Order (TPO) are included in Tree Survey and Arboricultural Impact Assessment report as part of the ES (Document Reference 6.4, Appendix 7.3).	N/A
139	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>TPO-- TD589, one poplar and two oaks on land to the east of the Somerset Progressive School, has also been recorded in the documents. These trees have also been largely obscured from the existing A358 by newer planting, but it is important that they are retained and protected.</p>	These trees are located outside the scheme footprint therefore will not be impacted by the scheme.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
140	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>One related issue that must be referenced at this point though, is that National Highways will need to be able to demonstrate that all near or off-site planting is on land either within their ownership or that they have a reasonable legal agreement with the land owner to facilitate the planting and address all maintenance issues (checking, watering, replacement planting, etc.) over subsequent years from the planting. Without this in place, there will be no guarantees on the future lifespan of any such planting.</p>	National Highways are continuing to engage with landowners in relation to off-site mitigation and planting. Relevant legal agreements will be sought in relation to temporary or permanent land take required to ensure appropriate maintenance of planting.	N/A
141	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>In general terms, the loss of scattered trees should be clearly quantified to enable a justification of their 'local importance' to be considered.</p>	<p>Existing and impacted trees and groups are quantified in the Tree Survey and Arboricultural Impact Assessment (Document Reference 6.4, Appendix 7.3).</p> <p>The comment on local importance of scattered trees is considered in the preparation of Chapter 7 Landscape and visual effects within the ES (Document Reference 6.2).</p> <p>The valuation of all habitat types, including scattered trees, is presented within Chapter 8 Biodiversity of the ES (Document Reference 6.2), this includes an updated assessment of valuation based on habitat surveys completed in 2021 since publication of the PEI Report.</p>	N/A
142	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>It appears that no 'veteran' trees would be affected by this new road, although the Black Poplar and some of the oaks may be well over 100 years old. The proposed 'veteranisation' of mature trees (involving wounding a healthy mature tree to encourage rot features) retained within the proposed scheme and wider landscape as a form of mitigation for veteran tree loss would not be supported and would be actively challenged.</p>	<p>The environmental mitigation proposals are presented on ES Figure 7.8 Environmental Masterplans (Document Reference 6.3). Areas of tree/woodland/screening planting and hedgerows with trees are proposed in locations where they are deemed to be required and most effective in mitigating impacts, however numbers of proposed trees are not quantified at this stage of design as the mixes, densities, and layouts will be developed at the detailed design stage, subject to successful DCO consent.</p> <p>The Habitat Mitigation Strategy, ES Appendix 8.24 (Document Reference 6.4) provides details on the unavoidable loss of two veteran trees at the eastern end of the scheme and measures proposed to compensate for this loss. These measures include the safeguarding of other veteran trees, for example through the installation of fencing to avoid poaching by livestock, in proximity to the scheme as well as reducing competition around mature and over-mature trees that comprise future veteran resource across the local landscape.</p> <p>Further measures proposed include the selective veteranisation of existing semi-mature trees, which would be undertaken in collaboration with experienced arboriculturalists, and would be utilised in situations such as Jordan's Park and Bickenhall Wood to try and ensure a continuation of the communities of flora and fauna that rely on the unique conditions created by the decay features associated with veteran trees.</p> <p>This matter is discussed in the Statement of Common Ground with Somerset Council (See Statement of Commonality Document Reference 7.3).</p>	N/A
143	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>The Council also notes that there does not appear to be any temporary provisions or screening whilst the proposed tree and hedgerow mitigation is maturing. This will be important not just for immediate</p>	Regarding the use of trees to act as acoustic screening to minimise noise, this approach is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			protection from visual impact and noise pollution, but could also be vital for biodiversity and wildlife in general. The Council would be grateful if this could be considered and addressed in any revisions to the PEIR or within the eventual Environmental Statement.	<p>vegetation required, tree planting is not generally adopted as a reliable noise mitigation measure.</p> <p>Details of proposed noise and vibration, landscape and biodiversity mitigation is detailed within ES Chapter 2 The project and each technical chapter of the ES (Document Reference 6.2). An Environmental Management Plan has also been prepared and is presented as ES Appendix 2.1 (Document Reference 6.4). The use of visual/acoustic bunds and barriers together with landscape planting has been incorporated into the scheme where appropriate. Full details are shown on Figure 7.8 Environmental Masterplans (Document Reference 6.3).</p> <p>ES Chapter 7 Landscape and visual effects presents the assessment of the landscape and visual impact assessment for the construction stage and operational stage. This includes representative viewpoints from the opening year and 15 years after opening following the establishment of mitigation.</p> <p>A number of ecological mitigation strategies have been prepared to support ES Chapter 8 Biodiversity and are presented as ES Appendices 8.24-8.35 (Document Reference 6.4). They detail measures to be taken to provide temporary fencing or other features to replicate the proposed function of hedgerow and tree planting while it establishes, for example to provide features to force passing bats or birds up over the carriageway, avoiding collision with passing vehicles.</p>	
144	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>It is unfortunate that the proposed road appears to largely obliterate the woodland at the eastern end of Greenway Lane. This woodland is not recorded as being 'ancient' but there are a number of mature trees present, mainly in the southern section. The Council will be looking to see efforts made to retain more of this southern part of the wood.</p>	As the design develops, the design and construction footprint has been minimised where possible through the woodland where engineering requirements/constraints allow.	Yes
145	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>Replacement planting is obviously welcome, but it would be some years before the new trees are sequestering the same carbon as the established trees. So the Council firmly believes that there needs to be an significant net gain of trees in the proposal. In these times of climate crisis and emergency, the Council believes that the only way that a major road-building project such as this can be acceptable is if a significant amount of new tree-planting and habitat creation is undertaken. To this end, the Council would like to see much more in the way new woodland planting along either side of the new road, subject to ecological suitability, than is currently shown on the plans. This should be carried out using UK-sourced nursery stock and should be essentially a woodland mix of mainly native species, although it is accepted that, due to climate change and diseases such as Ash Dieback, a small percentage of non-natives may need to be planted. The ongoing maintenance of this mitigation planting will be crucial.</p>	<p>The mitigation proposed aims to mitigate the impacts of the scheme and seek powers to acquire land where the need for mitigation is justified and proportionate.</p> <p>National Highways have developed a scheme design which includes extensive areas of hedgerow, scrub, tree and woodland habitat creation, as well as grassland, new water channels and ponds. All new planting would use native species that reflect the species composition of those habitats lost to the construction of the scheme and those of greatest wildlife benefit.</p> <p>As part of the Environmental Statement, National Highways has prepared an Environmental Management Plan (EMP) including a Landscape and Ecological Management Plan (see ES Appendix 2.1 including Annex D, Document Reference 6.4) that details the proposed mitigation and enhancement measures. This document also details management prescriptions and monitoring protocols for all habitat creation areas to ensure the successful establishment and long term viability of the habitats created.</p> <p>Within this document there is a commitment to review mitigation planting on an annual basis for the first 5 years, with any dead, damaged or diseased specimens to be replaced in the next available planting season with others of similar size and species.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				This matter is discussed in the Statement of Common Ground with Somerset Council (See Statement of Commonality Document Reference 7.3).	
146	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>The Council will comment on the Landscape and Ecological Management Plan when it is produced. Therefore, for now, the Council reserves judgement on this vital document.</p>	The Landscape and Ecological Management Plan is submitted as Annex D to Appendix 2.1 Environmental Management Plan with the DCO Application (Document Reference 6.4).	N/A
147	Somerset West and Taunton		<p>Comments on trees and hedgerows specifically, which are included in the PEIR under Chapters 7 (landscape) and 8 (Biodiversity).</p> <p>The main area where mature trees and hedgerow will be lost is the new route between J25 and the Mattocks Tree Green junction. In this area the road will be built through what is currently an attractive and rural series of fields that are bordered by well-treed hedgerows of field maple, oak, willow, ash, hawthorn and poplar. There are some good mature specimen oaks in these areas, but on the whole, it is not considered that many of them will be directly affected. The details of this will need to be reviewed when they have been surveyed and supplied for comment. Of particular concern is a mature Black Poplar to the south of Ruishton Court near to a junction of hedgerows that the Council would wish to be retained and protected. It is a native and nationally rare species. Black poplars are considered one of the most endangered native trees in the UK and hold significant cultural and biodiversity value. Adverse impacts to this black poplar should be avoided entirely. The Council will be looking to make sure that this tree is not impacted in any way as a result of the design of the new road, otherwise it might have to consider making the tree the subject of a Preservation Order.</p>	<p>Impacts on specific trees or groups of trees within and adjacent to the scheme boundary are presented in the Tree Survey and Arboricultural Impact Assessment presented as ES Appendix 7.3 (Document Reference 6.4). Where possible, impacts on high quality trees have been avoided through design where engineering requirements/constraints allow.</p> <p>The Ecological Mitigation Strategy – Habitats (Document Reference 6.4, Appendix 8.24) details measures that would be taken to encourage the long-term viability of the Black Poplar population within the local landscape along the scheme, by seeking to propagate this species and incorporate into the planting design for the woodland and hedgerow creation areas.</p>	N/A
148	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 8 (Biodiversity)-- Habitats and Protected Species</p> <p>Barn Owl</p> <p>The applicant is advised to explore opportunities to mitigate for loss of potential barn owl breeding sites away from the proposed scheme footprint, as well as encouraging the species to disperse from the vicinity of the A358. Highways are a leading cause of barn owl fatalities as the chapter acknowledges. Provisioning of barn owl boxes with suitable landowners at least 10 kilometres away from the proposed scheme is therefore recommended.</p>	<p>ES Chapter 8 Biodiversity and supporting appendices present the results of barn owl surveys completed by National Highways in 2021 and an assessment of the impact of the scheme on barn owls and measures to mitigate these impacts.</p> <p>Details of the barn owl surveys are presented in ES Appendix 8.14 Ecological Baseline Report – Barn owl (Document Reference 6.4). Ecological mitigation strategies have been prepared for various habitat and species to support ES Chapter 8 Biodiversity (Document Reference 6.2), these include ES Appendix 8.29 Barn owl (Document Reference 6.4) which includes a commitment to the provision of barn owl boxes.</p> <p>The ecological mitigation strategy and the Environmental Management Plan (EMP) including Annex D Landscape and Ecological Management Plan (Document Reference 6.4) details measures to be taken during both the construction and operational phases of the scheme to protect barn owls. Measures designed into the scheme (based on published research) focus on discouraging barn owls from the live carriageway and include tall hedgerows/treelines retained where possible along the highway boundary, and the creation of new vegetated screens (hedgerows and treelines) to encourage any barn owls within the scheme to fly high over the live carriageway. Habitat creation and management has been designed to reduce the extent of suitable barn owl foraging habitat (rough grassland) directly alongside the live carriageway, and where new barrier planting would take time to establish, the use of fencing has been considered. Although mitigation measures have focused on identified barn owl traffic</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				hotspots, measures have also been considered for the full length of the scheme. No barn owl boxes would be provided within the scheme boundary and no potential barn owl breeding sites fall within the site clearance boundary (no loss of potential breeding or resting/roosting sites). A barn owl box is proposed west of the scheme, located 1.5km from the main carriageway, to encourage barn owls to nest further away from the scheme.	
149	Somerset West and Taunton		<p>Comments on PEIR— Chapter 8 (Biodiversity)— General Consultation Document</p> <p>As a general point, National Highways are advised to consult with both the Somerset Bat Group and the Somerset Wildlife Trust for comment. This does not appear to have been undertaken and their views will be paramount in consideration of biodiversity.</p>	Somerset Wildlife Trust has been consulted and have provided responses. Somerset Bat Group has been consulted and further consultations are proposed thorough the DCO process.	N/A
150	Somerset West and Taunton		<p>Comments on PEIR— Chapter 8 (Biodiversity)— General Compliance with the Ecological Emergency</p> <p>Overall, the scheme will, at present, result in the continued and exacerbated severance of ecological networks by what in some places is a significantly and unnecessarily wide corridor. Fundamentally, the scheme should be looking to deliver environmental, not just biodiversity, net gain and improve the connectivity and quality of ecological networks. The Somerset Local Nature Partnership is currently in the early stages of developing a Local Nature Recovery Strategy for Somerset. The scheme for the A358 should be so designed as to enable the delivery of this Local Nature Recovery Strategy, with opportunities taken for linking currently severed and fragmented habitats, rather than making them worse. There would appear to have been no consideration of options such as green bridges, wildlife subways and similar. The scheme includes a number of landscape features and attenuation basins, however, there is no clear strategy for how these relate to opportunities for creating and extending nature recovery networks.</p>	<p>The fragmentation effect of large linear infrastructure projects is acknowledged within the ES and an impact assessment upon local species has been made accordingly.</p> <p>The majority of the scheme comprises widening of the existing A358, with multiple existing watercourse crossing and underbridge features that would be replicated/extended as part of construction of the new eastbound carriageway. A review was undertaken as to the appropriateness of including a green bridge/bridges within the preliminary design. However, due to the number of existing structures along the scheme (and the distance between these), geometry of the road alignment and adjacent residential properties, inclusion of a green bridge was not viable in terms of accordance with National Highways safety standards and the knock-on effects (in terms of site clearance) to implement this. In addition, the baseline biodiversity survey data did not support the need for a single 'green' crossing, with species crossing the existing carriageway in multiple locations between the tree canopy and/or through existing underbridges. The mitigation proposals have been discussed extensively with Natural England, who agree with the approach taken in terms of retaining important habitat crossing features and creating new woodland corridors in the vicinity of the scheme.</p> <p>Habitat creation areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible, habitat creation has been used to reconnect parcels of semi-natural habitats, including small woodland blocks within the local landscape along the A358. As an example, large blocks of woodland have been created around the Griffin Lane area on either side of the A358 to complement the belt of woodland that runs through the landscape in this part of Somerset, extending from the levels south to the Blackdown Hills.</p> <p>Additional measures have been incorporated into the scheme to facilitate the safe movement of wildlife. This includes mammal ledges within culverts and underbridges in key locations to encourage mammal passage beneath the scheme even in times of flood; badger tunnels would be incorporated where key badger movement corridors have been identified, and dormouse bridges would be used to maintain safe connection between dormouse habitats on either side of the scheme. Mammal-proof fencing has also been incorporated at key crossing points (for example watercourses) to direct wildlife towards tunnels, culverts and underbridges as appropriate.</p>	N/A
151	Somerset West and Taunton		Comments on PEIR— Chapter 8 (Biodiversity)— General Compliance with the Ecological Emergency	National Highways have worked with landowners to try to develop a scheme that leaves economically viable fields along the scheme. Due to the nature	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			On a similar note, the proposals appear to be creating pockets of sterilised land surrounded by infrastructure. This poses a commercial viability issue for continued farming of such land, but also encourages the fragmentation of habitat and creation of ecological deserts. This is particularly evident around the proposed Rapps/Ashill junction and the Stewely Link Road, but visible in multiple other parts of the scheme design.	of the scheme, the creation of some smaller parcels of isolated land is unavoidable, particularly around large junctions such as at Ashill and Mattocks Tree Green. Habitat creation has been designed where possible to provide habitat connections via hedgerows into these pockets of habitat or where this is not possible, habitats have been designed to benefit those species that would not find the road a barrier to dispersal, i.e. birds and flying invertebrates. It is also recognised however that certain species, such as barn owl, may be discouraged from these areas to avoid the risk of collision with passing vehicles. The details of all habitat creation measures are discussed within the ES.	
152	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 8 (Biodiversity)-- Biodiversity Net Gain</p> <p>The applicant is expected to use DEFRA's Biodiversity Metric (currently version 3.0), to demonstrate how mitigation proposals will account for loss of habitats (particularly the wealth of NERC Act (2006) Priority Habitats that are present within the application site). A Biodiversity Net Gain (BNG) assessment does not appear to have been submitted with the PEIR, and it is expected that this will be submitted with the ES at a later stage.</p>	<p>The Environment Act 2021 became law in November 2021. However, the obligation for Nationally Significant Infrastructure Projects (NSIPs) to deliver an increase of at least 10% biodiversity value is not expected to come into force until November 2025. Defra is developing a draft biodiversity gain statement, which will set out the detail of the biodiversity net gain objective and requirements for NSIPs.</p> <p>The Defra Biodiversity Metric 3.1 (published in April 2022) has been used to account for habitat losses and gains on the project. The results of this assessment are provided in the Biodiversity Metric Report found within Appendix 8.6 of the ES (Document Reference 6.2).</p> <p>Due to the timing of the DCO application for the scheme, it is anticipated that the requirement to meet the biodiversity net gain objective will not apply to the determination of the application and the mechanism to secure land for the purposes of delivering net gain will not be in place. As a result, the scheme instead seeks to maximise biodiversity through essential mitigation requirements for delivery in accordance with current statutory and policy requirements.</p> <p>A high-level quantification of the level of biodiversity that would be lost due to the scheme, and the additional biodiversity resource provided by the habitat creation/enhancement included within the scheme, has been undertaken using Defra metric version 3.1, and will be detailed within the Biodiversity Metric Report, included in ES Appendix 8.6 (Document Reference 6.4).</p> <p>This matter is discussed in the Statement of Common Ground with Somerset Council (e Statement of Commonality Document Reference 7.1)</p>	N/A
153	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 8 (Biodiversity)-- Design</p> <p>Dormouse Bridges</p> <p>The Environmental Statement should detail and justify how dormouse bridge proposals will, in addition to other measures, 'provide an equivalent level of connectivity and dispersal function to that lost' as claimed in the PEIR. The detail that needs to be included in this regard, must give detailed specifications of all such proposed bridges proposed.</p>	An Ecological Mitigation Strategy -Hazel Dormouse (Document Reference 6.4, Appendix 8.30) has been prepared to support ES Chapter 8 Biodiversity. The ES and associated baseline reports identifies the number and location of dormouse along the scheme. Justification for mitigation measures, including habitat creation and dormouse bridges, is provided in the ES Chapter 8 Biodiversity (Document Reference 6.2).	N/A
154	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 8 (Biodiversity)-- Impact Assessment</p> <p>There are concerns with potential short-term, medium-term and therefore long-term impacts to designated wildlife sites, biodiversity, and ecosystem functioning. The application supports what could be considered a nationally important level of biodiversity, including species that have endured drastic national declines, European Protected Species, and NERC Act (2006) Priority Species. Protected and Priority</p>	National Highways acknowledge that woodland creation is a medium- to long-term mitigation strategy, given the time taken for tree species to establish and mature. However, woodland creation proposals include the translocation of suitable tree species (where possible) to add a diversity of age and structure to newly created woodlands. All new planting would use native species that reflect the species composition of those habitats lost to the construction of the scheme and those of greatest wildlife benefit.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Species include otter, dormouse, breeding birds (including Schedule 1 species of the Wildlife and Countryside Act (1981) such as kingfisher and barn owl), bats (including four rare European Annex II species), great crested newts, brown hare, pole cat, hedgehog, harvest mouse, badger, water vole, reptiles, fish, aquatic and terrestrial invertebrates (including the nationally rare brown hair streak butterfly), and common toad. These species are supported by the 27 different habitat types recorded within the application site, which includes Priority Habitats. It is considered that the adequacy of proposed mitigation relies heavily in the long-term, when habitats would be established, which for woodland, as an example, will take decades. Paragraph 174 of the NPPF 2021 states that 'planning policies and decisions should contribute to and enhance the natural and local environment by (inter alia): protecting sites of biodiversity; recognising the wider benefits from natural capital and ecosystem services; minimising impacts on and providing net gains for biodiversity'.	<p>These areas of woodland creation have also been located to connect existing woodland areas, some of which currently comprise isolated pockets of semi-natural habitats, to provide an improved network of woodland and hedgerow habitats for species dispersal, facilitating the safe movement of wildlife through the landscape. In addition, the mitigation proposals include large areas of woodland and hedgerow improvements, focussing on removal of undesirable species (where appropriate) and more sensitive management to improve biodiversity.</p> <p>Should the DCO be granted, all habitat creation and enhancement located outside the land required for construction of the scheme would be implemented within the first suitable season after the DCO is granted.</p> <p>As part of the Environmental Statement, National Highways has prepared an Environmental Management Plan (EMP) including a Landscape and Ecological Management Plan (see ES Appendix 2.1 including Annex D, Document Reference 6.4) that details the proposed mitigation and enhancement measures. This document also details management prescriptions and monitoring protocols for all habitat creation areas to ensure the successful establishment and long term viability of the habitats created.</p>	
155	Somerset West and Taunton		<p>Comments on PEIR-- Chapter 8 (Biodiversity)-- Impact Assessment</p> <p>There is an area of 'Special Road Verge' categorised as species-rich along the carriageway verges adjacent to Hurford's Plantation. It is not clear in the PEIR if this area has been recorded in the updated Phase 1 surveys. The applicant is encouraged to consider incorporating species-rich grassland / wildflower opportunities across highway verges in accordance with Somerset County Council Pollinator Action Plan (2018-2028) objectives (see Objective 4.1).</p>	<p>The loss of the Road Verges West of Hatch Beauchamp Local Wildlife Site is acknowledged and assessed within the ES Chapter 8 Biodiversity (Document Reference 6.2)</p> <p>Opportunities are being taken to ensure the biodiversity value of the proposed road verges are maximised, with low-nutrient soils being used to allow the creation of species-rich grasslands with wildflowers in the verges where possible. In addition, species rich grasslands, and reptile grasslands is being provided in offsite locations.</p>	N/A
156	Somerset West and Taunton		<p>Comments on PEIR - Chapter 8 (Biodiversity) - Impact Assessment</p> <p>When describing impacts to habitats, the applicant is advised to quantify habitat loss and additionally categorise respective habitat loss in relation to cause for destruction. The PEIR is not clear in explaining the reasons behind significant amounts of habitat loss. Labelling as 'construction' is not sufficient. Considering the abundance of arable and agricultural farmland in the area, destruction of Priority Habitats to accommodate temporary work zones such as borrow pits, access roads, and site compounds would not be supported by the Council. Location convenience for such work zones is not considered acceptable.</p>	<p>The PEI Report detailed the anticipated impacts of the proposed scheme at that stage within the design process. ES Chapter 8 Biodiversity and its supporting appendices (Document Reference 6.2 and 6.4) provides greater detail and description of the source of impacts upon ecological receptors. Efforts have been made throughout the design process to reduce the impact of temporary features such as compounds, stockpiles and haul routes upon ecological features.</p>	N/A
157	Somerset West and Taunton		<p>Comments on PEIR - Chapter 8 (Biodiversity) - Habitats and Protected Species</p> <p>Brown Hairstreak</p> <p>Further clarification is required for the judgement of the brown hairstreak population to be of 'local importance'. This colony breeder is one of Britain's rarest butterflies and is evidently breeding across almost half of the application site hedgerows. It is advised the Environmental Statement sets out mitigation that includes the translocation of ovum to suitable receptor sites prior to destruction of hedgerows.</p>	<p>It is recognised that brown hairstreak is a species of principal importance and restricted in range beyond the south and western UK; however, Somerset is one of the strongholds for this species and whilst the species was found throughout suitable habitats across the scheme, this is as would be expected, given the habitats present and the location of the scheme.</p> <p>National Highways have designed a scheme that includes extensive areas of woodland, scrub and hedgerow creation. Species planting mixes will incorporate blackthorn, the food plant of brown hairstreak. Extensive hedgerow improvements are proposed along the length of the scheme, this will take the form of a reduced cutting regime to encourage a denser and taller hedgerow network to the benefit of a range of species including brown hairstreak. Hedgerow translocations are proposed in key locations along the scheme, with the intention of providing continuity of the available habitat structure. These measures would offer continued egg laying opportunities</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>for brown hairstreak in the landscape while the new areas of habitat creation establish.</p> <p>The ES Chapter 8 Biodiversity includes an ecological mitigation strategy for terrestrial invertebrates which incorporates brown hairstreak butterfly (see ES Appendix 8.35, Document Reference 6.4). Brown hairstreak butterfly information is provided in ES Chapter 8 Biodiversity (Document reference 6.2), with a brown hairstreak ecological baseline report provided in ES Appendix 8.23 (Document reference 6.4).</p>	
158	Somerset West and Taunton		<p>Comments on PEIR - Chapter 8 (Biodiversity) - Habitats and Protected Species</p> <p>Breeding Birds</p> <p>There is concern with the judgement of the breeding bird assemblage to be of 'local importance'. Furthermore, there is a strong argument that the loss of approximately 28 hectares of woodland and over 16 miles of hedgerow would undoubtedly result in a likely significant effect to breeding birds. Further details should be submitted within the Environmental Statement to outline how the proposed provision of habitat creation and bird boxes prior to construction would alleviate these effects, noting the significant timeline it would take for replanted habitats to establish and that not all breeding birds utilise boxes.</p>	<p>National Highways have completed further breeding bird surveys in 2021, and based on this additional information, the breeding bird assemblage was found to contain species populations of local and county level importance. Areas of existing vegetation of high biodiversity value including woodland, individual trees and hedgerows have been retained or protected where possible or minimised through design.</p> <p>Details of the breeding bird surveys are presented in ES Appendix 8.12 Ecological Baseline Report – Breeding birds (Document Reference 6.4). Ecological mitigation strategies have been prepared for various habitat and species to support ES Chapter 8 Biodiversity (Document Reference 6.2), these include breeding birds (see ES Appendix 8.28, Document Reference 6.4), which detail any requirements for pre-commencement surveys. The assessment of effects on breeding birds is presented within ES Chapter 8 Biodiversity (Document Reference 6.2).</p> <p>Alongside this extensive habitat creation, the details of nest box schemes are also provided. Nest boxes scheme have been specifically designed for farmland/hedgerow bird species, starling, woodland bird species, tawny owl/little owl/stock dove/jackdaw, and grey wagtail, the locations of which have been informed by the breeding bird surveys. Nest box schemes would be provided prior to construction where possible. For those species that do not use nest boxes, the habitat retention and creation is considered sufficient to avoid significant impacts.</p>	N/A
159	Somerset West and Taunton		<p>Comments on PEIR - Chapter 8 (Biodiversity) - Impact Assessment</p> <p>It is noted that many ecological surveys are on-going and that the PEIR lacks a cumulative impact assessment in this regard. Therefore, the Council has to reserve judgement on these areas and a complete response to impacts and mitigation proposals will be provided upon submission of this information, whether in the Environmental Statement or at some time before the ES is produced.</p>	<p>The PEI Report detailed initial results of ecological surveys and an indication of the anticipated impacts of the proposed scheme at that stage within the design process. An extensive suite of ecological surveys has since been completed, the results of which have informed the scheme design, with measures taken to avoid and reduce impacts where possible. ES Chapter 8 and supporting appendices (Document Reference 6.2 and 6.4) details the results of these surveys, an assessment of the impact of the scheme and measures to mitigate these impacts.</p> <p>A Habitats Regulation Assessment – Screening and Statement to Inform Appropriate Assessment has also been prepared and is submitted as Document Reference 6.5.</p>	N/A
160	Somerset West and Taunton		<p>Comments on PEIR - Chapter 8 (Biodiversity) - General Compliance with the Ecological Emergency</p> <p>It is recognised that an HRA Screening Assessment has been undertaken, likely significant effects have been identified and that an Appropriate Assessment will now follow.</p>	<p>An updated HRA document is included as part of the DCO submission (see Habitats Regulations Assessment: Screening and Statement to Inform Appropriate Assessment (Document Reference 6.5)).</p>	N/A
161	Somerset West and Taunton		<p>Comments on PEIR - Chapter 8 (Biodiversity) - Design</p> <p>Mammals</p>	<p>Every watercourse crossed by the alignment will have a mammal crossing provided, in addition, there will be four standalone badger tunnels. Locations</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			The first two pages of the Environmental Mitigation Plan lack suitable crossing points for mammals, such as badger, deer, and brown hare (sheet 1 and 2). It is strongly advised that the new line proposed for the road incorporates mammal culverts to alleviate the inevitable effects of fragmentation from the proposed scheme in the land parcels between the existing A358 and the proposed new line. There is also a lack of suitable crossing points for mammals in the southern region of the proposed scheme, noting there are no crossing points shown on sheet 8 and 9.	of mammal crossings are shown on General Arrangement Plans (Document Reference 2.5a).	
162	Somerset West and Taunton		Comments on PEIR - Chapter 9 (Geology and soils) and chapter 16 (summary).  The methods outlined in the PEI Report for assessing the impact of potential land contamination are in line with what would be expected for this type of scheme.	National Highways welcomes support for the methodology for assessing impact of land contamination.	N/A
163	Somerset West and Taunton		Comments on PEIR - Chapter 9 (Geology and soils) and chapter 16 (summary).  Conceptual site models (CSMs) have been produced for each of the potential contaminated land sites as these are most likely to interact with the proposed scheme and/or associated construction works. A programme of intrusive investigation is to be undertaken across the current proposed scheme to provide information on the ground conditions and to inform the design.	National Highways note and agrees with comments made. Impacts on the environment with regard to land contamination and effect on human health, surface water and groundwater receptors are assessed within ES Chapter 9 Geology and soils (Document Reference 6.2).	N/A
164	Somerset West and Taunton		Comments on PEIR - Chapter 9 (Geology and soils) and chapter 16 (summary).  The Report refers to the relevant guidance for the assessment of potentially contaminated land and outline the methodology that will be used. This includes gathering relevant data on potential contamination and sensitive land uses and waters: assessing the potential risks and a walkover surveys of selected sites.		N/A
165	Somerset West and Taunton		Comments on PEIR - Chapter 9 (Geology and soils) and chapter 16 (summary).  The Report states that for the construction phase risks could be mitigated by applying best practice, which would be set out in an Environmental Management Plan.		N/A
166	Somerset West and Taunton		Comments on PEIR - Chapter 9 (Geology and soils) and chapter 16 (summary).  No operational effects were identified regarding contamination.		N/A
167	Somerset West and Taunton		Comments on PIER - Chapter 6 (Cultural Heritage) - Archaeology  The Council considers that the study area, referred to in paragraph 6.5.6, of 250 metres, is appropriate in terms of assessing adverse effects on non-designated heritage assets with archaeological interest, such as buried archaeology.	National Highways acknowledge support for the proposed assessment methodology.	N/A
168	Somerset West and Taunton		Comments on PEIR - Chapter 9 (Geology and soils) and chapter 16 (summary).  Section 9.11 of the Report outlines further work that will be undertaken, including further site investigations, a land contamination risk	National Highways notes feedback raised. The findings of the ground investigation and updated land contamination risk assessment is presented in ES Chapter 9 Geology and soils (Document Reference 6.2) and in ES Appendix 9.2 (Document Reference 6.4).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			assessment and further monitoring of watercourses. This will need to be assessed when the Council receives sight of the additional information referred to. So, judgement is reserved at this stage.		
169	Somerset West and Taunton		<p>Comments on PEIR - Chapter 9 (Geology and soils) and chapter 16 (summary).</p> <p>The Chapter on Geology confirms that the impacts on the environment of the proposed scheme is to be considered with regard to land contamination and the effect on human health, surface water and groundwater receptors. The Report gives baseline conditions with regard to potential contamination and identifies potential contaminant linkages which could be formed due to the construction and/or operation phases of the proposed scheme. This forms the basis of the assessment of the potential effects from land contamination.</p>		N/A
170	Somerset West and Taunton		<p>Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>The noise assessment concludes that several hundred properties will have "adverse significant noise effects", which is many more than will have a benefit. The figures with the noise report do include a noise difference contour map and a plan showing the significantly affected receptors (benefit and adverse). The main area of benefit will be in Henlade, with some adverse effects on the route of the new bypass around Henlade. However, there are also adverse effects at properties close to the existing route, which the Report states could be due to a combination of alignment changes, speed and flow increases as a result of the new improved road. In general terms though, the PEIR recognises that 324 properties will receive either direct or indirect permanent beneficial noise affects from the regrading and re-routing of the road. However, 813 properties will have either direct or indirect significant permanent adverse noise effects arising from the operation of the new road. This is simply not reasonable, unless National Highways are going to pay for and provide a scheme of mitigating double glazing. Whilst physical barriers can provide some rest bite from noise pollution, most such schemes would involve built intrusions into the countryside, which would be harmful to visual amenity (and possibly wildlife). Appropriate planting, and a significant amount more than is currently proposed, would appear to be the only natural solution to the issue of additional noise pollution.</p>	<p>The scheme will include a low noise surface to minimise noise generation in all locations. Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. Where individual residential properties are still predicted to be exposed to noise increases above the thresholds set out in the Noise Insulation Regulations 1975, they may qualify for a package of noise insulation measures (glazing and ventilation) to minimise noise ingress to their property. This is reported in Chapter 11 Noise and Vibration of the ES (Document Reference 6.2).</p> <p>The updated assessment presents the conclusions of the assessment including the number of significant noise and vibration effects both adverse and beneficial during construction and operation.</p> <p>With regard to the use of trees to act as acoustic screening to minimise noise, this approach is generally not effective in providing substantive, consistent noise mitigation given the seasonal nature of leaf cover and the density of vegetation required. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. However, the proposed noise bunds would be complimented by visual screening where required. Details of the environmental design and mitigation proposals are presented on Figure 7.8 Environmental Masterplans (Document Reference 6.3).</p>	N/A
171	Somerset West and Taunton		<p>Comments on PEIR - Chapter 12 (Population and Health).</p> <p>It is noted in paragraph 12.9.124 under the reference of 'Employment and training, that "a proportion of the construction workforce would be brought into the area and therefore made up of workers travelling from outside the area". The Council really urge National Highways to rethink this statement and overall policy. It is important that National Highways looks to commission as much work to local subcontractors and embed into this apprenticeship and training plans as part of the requirements to be trained in civil engineering and sustainable construction and engineering. This should linking with the Local Colleges and Universities centres to create employment and career opportunities for young people, especially in Taunton.</p>	<p>The assessment in ES Chapter 12 Population and human health (Document Reference 6.2) is in accordance with the DMRB standard LA 112. It sets out, at a high level, employment and economic matters and assumptions that are relevant to the assessment of likely significant effects on population and human health, including local communities.</p> <p>LA112 does not require provision of the anticipated total number of workers required during construction. Further information on the number of workers can be made available once a contractor is appointed, which is the point at which more certainty can be provided.</p> <p>At this stage, there is no need/requirement for an Employment and Skills Plan to be adopted. National Highways is a responsible employer, and it helps ensure through its sustainable procurement practices that community benefits and targeted recruitment and training benefits are realised through</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				its delivery of programmes and projects, including the A358 Taunton to Southfields Dualling Scheme.  National Highways can provide further information about its tendering process on request. A successful contractor would be required to deliver such benefits and its performance will be carefully monitored and evaluated during construction in accordance with National Highways Key Performance Indicators.	
172	Somerset West and Taunton		Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).  The methods outlined in the PEI Report for assessing the impact of noise and potential land contamination are in line with what would be expected for this type of scheme.	National Highways welcomes support for the methodology for assessing impact of noise and potential land contamination.	N/A
173	Somerset West and Taunton		Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).  While there are plans and figures showing relevant information, the details of the data or calculations regarding the air quality and noise assessments are not included with the Report. Without this information is it not possible to give a detailed comment on the assessment carried out so far, therefore, it should be included in the more detailed reports to follow or, made available on request.	Operational traffic noise assessments have been carried out in accordance with CRTN which is the standard UK methodology for assessing noise from new and altered roads, together with minor updates to methodology as outlined in DMRB LA 111 Appendix A. Computer noise models were built using the full 3D engineering design based on preliminary design. Traffic data inputs are described in paragraph 11.4.18 and 11.4.19. Predictions of noise levels at sensitive receptors during operation are presented in Appendix 11.5 of the ES Appendices (Document Reference 6.4).  Construction noise predictions have been undertaken following the prediction methodology in BS 5228 using source noise levels taken from BS 5228 Annex C as set out in Appendix 11.4 of the ES Appendices (Document Reference 6.4). These have been used to predict the noise levels at sensitive receptors from the works for different activities. Further detail on construction noise and vibration predicted levels are reported in Appendix 11.4 of the ES Appendices (Document Reference 6.4).  The impact of construction dust and operational traffic were assessed and reported in the PEI Report Chapter 5 Air Quality following the guidance outlined within DMRB LA 105. The impact of construction dust, construction traffic and operational traffic has been assessed based on updated design information in accordance with DMRB LA 105 guidance for the ES. In accordance with this guidance a simple level assessment was undertaken. The methodology and results of these assessments are reported in ES Chapter 5 Air Quality and supporting appendices (Document References 6.2 and 6.4). Best practice mitigation measures relating to construction dust and construction traffic are included in the Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4).	N/A
174	Somerset West and Taunton		Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).  The Report includes tables outlining the numbers of properties that could be subject to "significant operational noise effects" in a number of areas along the route of the road. The results are summarised below (from Chapter 16)	The findings of the noise assessment are presented in the ES Chapter 11 Noise and vibration and ES Chapter 16 Summary (Document Reference 6.2).	N/A
175	Somerset West and Taunton		Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).  The Report states that the assessment will follow the methodology set out in the Design Manual for Roads and Bridges (DMRB), LA 111 Noise and vibration, and that Annex E/1 of DMRB LA 111 Noise and vibration	National Highways notes conclusions in the PEI Report Chapter 11.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			provides instruction on how to take account of government noise policy when assessing road schemes		
176	Somerset West and Taunton		<p>Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>Operational Stage</p> <ul style="list-style-type: none"> <li>• Direct permanent beneficial significant noise effects have been identified at 113 residential properties.</li> <li>• Direct permanent adverse significant noise effects have been identified at 439 residential properties.</li> <li>• Indirect permanent beneficial significant noise effects have been identified at 211 residential properties.</li> <li>• Indirect permanent adverse significant noise effects have been identified at 374 residential properties.</li> </ul>	The findings of the noise assessment are presented in the ES Chapter 11 Noise and vibration (Document Reference 6.2).	N/A
177	Somerset West and Taunton		<p>Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>The Report states that further work will be carried out to incorporate additional noise mitigation measures into the design, and that updated significant effects will be reported. It should be noted that the best way to deal with noise problems is to reduce the noise at source, with barriers etc being the secondary way to mitigate any noise. Therefore, National Highways should look at ensuring that the road surface chosen will reduce the level of noise being generated as much as possible.</p>	The scheme includes a low noise surface to minimise noise generation in all locations.	N/A
178	Somerset West and Taunton		<p>Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>Noise levels were calculated across a grid of receptor positions over the study area to produce contours of noise level exposure. Additional calculations were also conducted at specific assessment locations to represent noise sensitive receptors (NSR) (e.g. residential properties).</p>	National Highways notes conclusions within the ES Chapter 11 Noise and vibration (Document Reference 6.2).	N/A
179	Somerset West and Taunton		<p>Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>Paragraphs 11.11.18-22 outline proposed further work as listed below.</p> <ul style="list-style-type: none"> <li>• As part of the EIA, the preliminary operational assessment will be updated to reflect the Design Fix 2 scheme design.</li> <li>• The operational assessment will be updated to include the PCF stage 3 traffic modelling outputs and updated road surface information.</li> <li>• Additional noise mitigation will be incorporated into the design and updated significant effects will be reported in the ES.</li> <li>• An assessment of noise impacts from night-time construction works and diversion routes at night will be undertaken if applicable and reported in the ES.</li> <li>• An assessment of noise impacts of construction traffic on site haul roads and the public highway will be undertaken and reported in the ES.</li> </ul>		N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
180	Somerset West and Taunton		<p>Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>Regarding noise, the main benefits are to properties on the existing road in Henlade which will benefit from the new road bypassing the village. However, it is noted that the Scheme will also lead to some adverse effects to properties along the route</p>	The noise assessment has been updated and is reported in ES Chapter 11 Noise and vibration (Document Reference 6.2) taking into account updated traffic modelling, a low-noise road surface and roadside noise mitigation in the form of bunds and noise fence barriers. The updated chapter presents the conclusions of the assessment including identified significant noise and vibration effects both adverse and beneficial, for construction and operation.	N/A
181	Somerset West and Taunton		<p>Comments on PEIR - Chapter 11 (Noise and Vibration) and chapter 16 (summary).</p> <p>Construction Stage</p> <ul style="list-style-type: none"> <li>• Temporary adverse significant noise effects from construction activities have been identified at approximately 345 residential and non-residential noise sensitive receptors within the study area.</li> </ul>	The findings of the noise assessment are presented in the ES Chapter 11 Noise and vibration (Document Reference 6.2).	N/A
182	Somerset West and Taunton		<p>Comments on PEIR - Chapter 12 (Population and Health).</p> <p>This chapter also considers the potential impacts to local businesses and farmers in particular. It would be helpful to see those who will be impact by this scheme, such as local businesses and farmers, offered some form of grant or support to deal with the disruption to their business and impact and consequential loss of trade during the period of the construction work. Also, simple measures such as officers dedicated to providing information on timings of works and its intensity along the route, to give the business plenty of time to plan, would be welcomed. This would be in accordance with the two other local Development Consent Orders approved for the New Nuclear Build at Hinkley Point C and the Connections project for National Grid, where this type of funding has been made available to mitigate the impact of noise, pollution, disturbance and impact on trade and the communities. This would ensure there is local economic benefit to communities and businesses along the route.</p>	<p>ES Chapter 12 Population and human health (Document Reference 6.2) has been undertaken in accordance with the accepted guidance and methodology presented within DMRB LA112 Population and human health. This includes consideration of the impacts on local communities and residential properties. Mitigation is proposed within the scheme to avoid or reduce adverse effects where feasible to businesses and agricultural holdings and these are secured through the DCO. Such measures are listed in Table 3-2 Register of Environmental Actions and Commitments (REAC) table within ES Appendix 2.1 Environmental Management Plan (EMP) (Document Reference 6.4).</p> <p>National Highways continues to engage with landowners directly affected by the scheme using clear statutory procedures, to understand the effects of the scheme on their land interest. Specific mitigation solutions or compensation would be agreed on a case-by-case basis as appropriate, in line with the compensation code. Some landowners may be entitled to make a claim for compensation under the Land Compensation Act 1961.</p> <p>National Highways recognises concerns over the disruption to the local road network and communities during construction of the scheme and will seek to reduce disruption while maintaining highway safety.</p> <p>National Highways has produced ES Appendix 2.1 Environmental Management Plan (EMP) Annex B Construction Traffic Management Plan (CTMP) (Document Reference 6.4) which sets out how the impact of construction on the environment, the road network and local communities will be managed. As set out in the EMP, a community liaison officer will be appointed during the construction of the scheme to provide ongoing dialogue with stakeholders and members of the public.</p>	N/A
183	Somerset West and Taunton		<p>Comments on PEIR - Chapter 13 (Road drainage and the water environment).</p> <p>It is appreciated that this chapter is primarily the domain of the County Council, who are the Lead Local Flood Authority and have responsibility for drainage issues. However, Somerset West and Taunton Council has to place a 'marker' down about the issue of phosphates and this would appear to be the most relevant place in which to do so.</p>	<p>National Highways are aware of the Biodiversity Emergency issued by the Somerset Councils (as were) following advice issued by Natural England that the Somerset Levels and Moors SPA and Ramsar site is in unfavourable conditions primarily due to phosphate levels in surface water. In response, Somerset Council is considering phosphate emissions from developments given within planning applications, primarily developments such as residential, agricultural, and commercial developments. Road developments are not considered significant sources of phosphates. However, we have considered the potential impacts of phosphates from the scheme on designated sites and have reported the results (no significant effects) of this assessment in the Habitats Regulations Assessment –</p>	N/A
184	Somerset West and Taunton		<p>Comments on PEIR - Chapter 13 (Road drainage and the water environment).</p>		No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Conversely, the scheme also potentially presents an opportunity for delivery of strategic-scale nature-based phosphate stripping solutions. Such potential should be explored and delivered as part of multi-functional green infrastructure, alongside the hard infrastructure of the scheme, linked to delivery of nature recovery networks.	Screening and Statement to Inform Appropriate Assessment (Document Reference 6.5).	
185	Somerset West and Taunton		<p>Comments on PEIR - Chapter 13 (Road drainage and the water environment).</p> <p>The site for the new road is hydrologically linked to the Somerset Levels and Moors, a site of international importance recognised by its SPA and Ramsar designations. The PEIR does not include a preliminary assessment of the scheme on the Somerset Levels and Moors at this stage, as it will be considered in the Appropriate Assessment. However, it is important to note that the Ramsar site is in an unfavourable condition, with the deposition of phosphates a key contributor to this, causing eutrophication of watercourses and impacting on birds identified as qualifying features of the Ramsar designation. Phosphates occur naturally through the weathering and erosion of rocks, or in agriculture and food production, through the use of fertilisers and food additives, and in animal and human waste. Therefore, the scheme has potential to release additional phosphates into nearby watercourses through disturbing phosphates stored in agricultural soils. Due to being hydrologically linked, these phosphates will be deposited in the Levels and Moors. This issue should be considered and assessed as part of the Appropriate Assessment.</p>	<p>A sustainable drainage design has been developed for the scheme. This has been informed by a detailed assessment of the potential impact of highway related runoff (using National Highways Water Risk Assessment (HEWRAT) tool) to ensure that an appropriate sequence of water quality treatment is in place to tackle the pollutants generated by the highway network (metals and hydrocarbons). In addition, embedded mitigation measures have been included for specific watercourses providing watercourse channels with a more natural plan form and cross sections which enhance aquatic vegetation and have been known to buffer the effects of high nutrient loading.</p> <p>Best practice mitigation measures relating have been included in the Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4).</p>	No
186	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Climate Conscious Design</p> <p>In addition to emissions associated with future road use, there will be significant embedded emissions associated with the construction of the scheme. This is estimated in the PEIR at 80 ktCO<sub>2</sub>e, but this figure does not fully consider emissions associated with land use change for instance. The PEIR suggests that the carbon reduction is embedded in the scheme design, however, there is little evidence of this. The scale of some of the junctions seems unnecessarily big and as such will use more materials with more emissions associated with their production. Has consideration been given to re-use of non-recyclable materials in the materials used for surfacing, e.g. plastics?</p>	<p>All projects have a range of benefits and disbenefits on the environment, and it is unusual for a road project to meet all aspirations. Therefore, the measure of environmental responsibility is always a balanced amalgam of all environmental benefits and disbenefits. Regarding carbon, we have assessed both embodied and tailpipe carbon using the methodologies identified in DMRB LA114 Climate and the best information available to date.</p> <p>The ES Chapter 14 Climate (Document Reference 6.2) presents an assessment of land use change (including loss of woodland) and identify, assess and integrate measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., through the use of renewable technologies). Additionally, National Highways set out how they will manage the green space for carbon removal, renewable generation, safety and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030.</p> <p>Further details in relation to embedded mitigation including those related to climate are discussed in ES Chapter 2 The project (Document Reference 6.2)</p>	N/A
187	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - General scheme compatibility with the Climate Emergency</p> <p>Overall, the scheme needs to show how it is responding to the Climate Emergency and that it is not contrary to it. This should include being net zero overall through a combination of embedded design, delivery of associated infrastructure to enable modal shift and encourage behaviour change, and offsetting remaining embodied and operational carbon emissions through local holistically considered and co-beneficial</p>	National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five-year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			projects, for example, tree planting, wetland creation and shifts in land management practices to sequester carbon and simultaneously deliver other ecosystem services. Whilst the National Policy Statement for National Networks may suggest that an increase in carbon emissions can only be a reason for refusal when it will materially affect the UK's ability to meet its carbon budgets, the cumulative impact of this scheme along with all other road improvement schemes and other carbon emitting proposals must be considered and every opportunity to reduce, mitigate and offset emissions taken. The updated Net Zero Target of the Climate Change Act is legally binding, and the 2037 sixth carbon budget is intended to become so. Responding effectively to these targets requires urgent and radical action now.	National Highways 'Net Zero Highways: our 2030/ 2040/ 2050 plans' outlines its ambitious plan to be net zero by 2050.  National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the Preliminary Environmental Information (PEI) Report considered impacts over a 60 year period and compared emissions against the UK 4 <sup>th</sup> Carbon Budget (construction emissions) and the 5 <sup>th</sup> and 6 <sup>th</sup> Carbon budgets (for operation). This assessment has also been incorporated into Environmental Statement (ES) Chapter 14, which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the EIA Regulations and concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.	
188	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate) - Walking and Cycling Access and Infrastructure  The co-routing of the A358 and a strategic cycle route like this further presents the opportunity for enabling multi-modal trips, particularly when combined with mobility hubs. Carefully considered rural mobility hubs along the route of the A358, could enable modal shift and improve the viability of mobility services to rural Somerset. Such hubs could incorporate park and change facilities for a new, fast and direct public or shared transport service, e-bikes, Demand Responsive Transit, EV charging, freight consolidation and parcel collection facilities, and work hubs with high quality digital connectivity.	National Highways maintains and operates the strategic road network. The Government's Road Investment Strategy includes Designated Funds whereby National Highways works with partners to deliver projects that may be relevant to but beyond scheme delivery. Mobility hubs and digital innovation could not be delivered as part of the scheme but may be eligible for other funding opportunities.	N/A
189	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate) - General scheme compatibility with the Climate Emergency  It is widely accepted that new road schemes tend to result in increased numbers of cars travelling on the network (induced traffic), particularly where they are built with the aim of increasing capacity, reducing congestion and improving flow. Such a result would, on the face of it, be entirely counterproductive to responding to the Climate Emergency and the need to secure radical reductions in emissions over the course of the next decade. Transport emissions have remained stubbornly high and in fact have been increasing in recent years (excluding in relation to the pandemic). Therefore, a scheme like this can in one sense be seen as running contrary to what is needed. The traffic modelling included, backs this point up. It shows how overall vehicular movements are expected to significantly increase over the period to 2028 and 2043, presumably due to general population growth and other schemes, but further still as a direct result of this scheme. This is demonstrated by the figure at point I in Figure 6-1 of the Technical Traffic Note.	National Highways acknowledges the range of views expressed including concern around impact on traffic. The proposals aim to address the traffic issues and long delays currently experienced along the route and to improve traffic flow, safety and connectivity for local residents and other road users. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4) submitted within the DCO application.  Emissions from construction and operation have been quantified in ES Chapter 14 Climate (Document Reference 6.2). These have been considered in the context of the nationally legislated carbon budgets, and the significance assessment is based on an assessment of whether the scheme will materially affect the UK's ability to meet these budgets. This is in accordance with the methodological requirements in DMRB LA 114 Climate and the National Policy Statement for National Networks (NPSNN). Mitigation measures which are proposed to reduce carbon emissions in construction and operation are described in the ES.	N/A
190	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate) - General scheme compatibility with the Climate Emergency  Whilst the electrification of transport should in theory drastically reduce transport emissions, this is dependent on there being sufficient renewable power generated to match/exceed this, alongside electrification of heat and general power consumption. Electrification of transport alone is not enough. It must be accompanied by an overall	The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. The needs of walkers, cyclists, horse-riders and disabled users have been considered as part of the design development of the scheme, in line with the appropriate design standards.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			reduction in vehicular use and modal shift, supported by behaviour change - as reflected in the transport-related outcomes of the Somerset Climate Emergency Strategy. The proposals fail to identify how the scheme can be compatible with any of these outcomes. There should be significantly more consideration about how the scheme can become more closely aligned to achieving these outcomes, whilst still delivering improved resilience to the strategic road network which is necessary. This would include facilitating the electrification and alternative decarbonisation of transport, improving digital connectivity, enabling active travel and facilitating public and shared transport options for rural Somerset.	UK Government published Decarbonising transport: a better, greener Britain in July 2021, which outlines 78 commitments to decarbonising all forms of transport and details key enablers and measures for achieving this. This includes a focus on achieving zero emissions for road transport through provision of infrastructure that supports the transition to zero emissions and a phasing out of non-zero emissions road vehicles in a shift towards electric. However, there is not current funding/actions for the DfT Decarbonising Transport Plan and National Highways Net Zero highways 2030/2040/2050 plan and therefore it has not been used to interpolate emissions.	
191	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  Paragraph 14.1.1 refers to DMRB LA 114 Climate Revision 0. My understanding is that this has been withdrawn and replaced with version 0.0.1 (2021). The assessment should align with the latest guidance.	ES Chapter 14 Climate (Document Reference 6.2) has been prepared in accordance with the guidance of DMRB LA 114 Climate.	N/A
192	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  Paragraph 14.11.2 is somewhat disingenuous in claiming that "The preliminary assessment of proposed scheme impacts.....will not in isolation.....have a material impact on the ability of the UK government to meet its carbon reduction targets". This does not appear to be either tested or proven. It is accepted that 'in isolation' the scheme would not. That is not the issue here though. National Highways own projected traffic flow forecasts show a rise in traffic using the new road as compared to the existing A358 of, on average, 65% for the 2028 projection and for the 2043 projection. This is taken from Figure 6-1 ('Daily traffic flows in the traffic model') on page 12 of the 'A358 Technical Traffic Note dated 29th September 2021. Every scheme has a duty to contribute to the wider government aim of reducing emissions throughout the U.K. as a whole. No one scheme could ever do it 'in isolation'. It is the collective efforts and in-combination effects that will make a real difference.	National Highways acknowledges the range of views expressed including concern around impact on traffic. The proposals aim to address the traffic issues and long delays currently experienced along the route and to improve traffic flow, safety and connectivity for local residents and other road users. The methodology and results of the traffic modelling is reported in the ComMA Report (Document Reference 7.4) submitted within the DCO application.  Emissions from construction and operation have been estimated in ES Chapter 14 (Climate) (Document Reference 6.2). These have been considered in the context of the nationally legislated carbon budgets, and the significance assessment is based on an assessment of whether the scheme will materially affect the UK's ability to meet these budgets. This is in accordance with the methodological requirements in DMRB LA 114 and the National Policy Statement for National Networks (NPSNN). Mitigation measures which are proposed to reduce carbon emissions in construction and operation are described in ES Chapter 14 Climate (Document Reference 6.2).	N/A
193	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  Paragraph 14.6.6 makes clear that the climate baseline used is provided by the Met Office, using a thirty year average between 1981 and 2010. This unfortunately will not therefore include the extreme adverse weather events of December 2013 to spring 2014 which saw the complete flooding of the Somerset Levels. Whilst there may have been specific occurrences which led to such widespread flooding, it would be remiss to assume that it would not re-occur. Therefore, it must be taken into account in any baseline figure.	The ES (Document Reference 6.2) has made use of the most recent baseline period available through the Met Office, which is the most robust dataset available for the UK. The use of this baseline period does not imply that extreme flood events such as those in 2013 and 2014 will not occur again – these sorts of extreme events are considered through the analysis of climate parameters such as projected changes in precipitation, in particular heavy rainfall events. Shifting the baseline forward to include specific events would make the projected changes look less significant in comparison, potentially giving the impression less mitigation is needed. Using the Met Office's most recent baseline period represents a more conservative approach.	N/A
194	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  Paragraph 14.9.14 states that the construction process emissions have been "consciously and knowingly underestimated". It would be more meaningful to provide a realistic estimate or even over-estimate construction emissions.	The greenhouse gas emissions presented within the PEI Report have been estimated based on the information available at the time of assessment and is therefore preliminary reasonable worst-case estimation. The ES Chapter 14 Climate (Document Reference 6.2) presents a more realistic reasonable worst-case estimate of greenhouse gas emissions.	N/A
195	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)	For user emissions, the assessment has used the DMRB Screening Tool (which references the UK Emission Factor Toolkit v10) for consistency with the air quality assessment. As noted in ES Chapter 5 Air quality, traffic data	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Paragraph 14.2.4 acknowledges that the Climate Change Act 2008 committed the UK to its first statutory carbon reduction target of reducing carbon emissions by at least 80% from 1990 levels by 2050. The Climate Change Act 2008 (2050 Target Amendment) Order 2019 amended the Climate Change Act 2008 by introducing a target for at least a 100% reduction of GHG emissions (relative to 1990 levels) in the UK by 2050. This is often referred to as 'net zero' GHG emissions. National Highways own projected traffic flow forecasts show a rise in traffic using the new road as compared to the existing A358 of, on average, 65% for the 2028 projection and for the 2043 projection. This is taken from Figure 6-1 ('Daily traffic flows in the traffic model') on page 12 of the 'A358 Technical Traffic Note dated 29th September 2021. Therefore, with a predicted average approximately 65% in traffic movements, based on National Highways own predicted forecasting used in this exercise, there really does need to be some explanation of how 'net zero' is going to be reached. This is backed up by the Department for Transport document "Decarbonising transport: a better, greener Britain," published in July 2021, which outlines 78 commitments to decarbonising all forms of transport and details key enablers and measures for achieving this. This includes a focus on achieving zero emissions for road transport through provision of infrastructure that supports the transition to zero emissions and a phasing out of non-zero emissions road vehicles in a shift towards electric.	used modelled years of 2023 and 2038 (and a 60-year assessment period overall).  However, it is noted that the DMRB Screening Tool is limited in its projections to 2030. This means that for this assessment, any emission predictions after 2030 use 2030 assumptions. The DfT TAG methodology provides data on the potential uptake of electric vehicles which would likely substantially reduce emissions in the future. This would apply to both the Do-Minimum and the Do-Something scenarios equally and would therefore reduce any potential difference in emissions between the scenarios. Furthermore, this preliminary assessment likely represents a conservative scenario. This is discussed further in ES Chapter 14 Climate (Document Reference 6.2).	
196	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  In paragraph 14.4.7, by National Highways own admission, it is estimated that an area of between 200-300 hectares of forest would be required to sequester the embodied carbon impacts of the proposed scheme over its design life. The given response to this is "Therefore, an intervention to sequester the carbon impacts of the proposed scheme is not considered feasible and has not formed part of the GHG emissions preliminary assessment". This is not an appropriate response to this issue, particularly as no alternative solutions are suggested. So, how are the carbon emissions for the scheme going to be accounted for and either 'offset or sequestered if the scheme is to be built'?	ES Chapter 14 Climate (Document Reference 6.2) presents an assessment of land use change (including loss of woodland) to identify, assess, and integrate measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., using renewable technologies). Additionally, National Highways set out how they will manage the green space for carbon removal, renewable generation, safety, and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five-year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030.	N/A
197	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  On the specifics of chapter 14, the Council has the following comments to make.	National Highways acknowledges the feedback made on climate. Responses are provided to each point made in the remainder of the table.	N/A
198	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  Paragraph 14.8.9. One of the mitigating measures considered in the list in this paragraph is that the e main Soft landscape features are to be maintained following establishment through watering in periods of dry weather and carrying out periodic inspections to monitor the establishment of new planting. It is not clear in this paragraph if the land where the off-site planting is indicated, is within National Highways ownership for them to be able to do this, or whether they have legal agreements to allow the proposed maintenance to occur. This needs to be clarified, otherwise the words are meaningless and the planting could be prejudiced. This would undermine a significant part of the proposed climate strategy.	National Highways are continuing to engage with landowners in relation to off-site mitigation and planting. Relevant legal agreements will be sought in relation to temporary or permanent land take required to ensure appropriate maintenance of planting as outlined in the ES (Document Reference 6.2).  National Highways takes overall accountability for the management of corporate risks, including climate change. Therefore, National Highways will have responsibility for delivery of the net-zero plan whilst a central carbon team provides day-to-day coordination of our carbon performance, with clear actions and governance devolved to each directorate. National Highways has already gathered strong data on National Highways' carbon performance for many years. They have carried out a review of current data systems and will develop a plan to upgrade the processes, systems, and assurance, which will be complete for the end of 2024. Additionally, an	N/A

				<p>annual report covering National Highways' progress and performance will be published.</p> <p>Landowner discussions have continued throughout the development of the scheme and now include the district valuer to provide information and guidance around compensation and the possibility of entering into section 253 agreements. Considering the scale of environmental mitigation proposed as part of the scheme it is the intention to enter into as many agreements as possible with landowners. As part of this process the team have started to draft these outline management agreements.</p>	
199	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>This scheme will create significant amounts of carbon emissions from the construction phase of the scheme, including from materials to build the road (concrete, steel, tarmac), from the machinery and vehicles used during construction (diggers, dumpers and others) and from the emissions generated from the workforce (transport miles, accommodation, food). It will also continue to generate increased carbon emissions through its operational period by attracting greater volumes of traffic locally and by creating additional capacity on the national road network, which will in turn facilitate additional carbon throughout the UK highways network as more people travel from the South East down to the South West.</p>	<p>National Highways is cognisant of the changes introduced by the Climate Change Act 2008 (2050 Target Amendment) Order 2019, and the net-zero ambition is set out within the amendments. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.</p> <p>National Highways 'Net Zero Highways: our 2030/ 2040/ 2050 plans' outlines its ambitious plan to be net zero by 2050.</p> <p>National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented within the Preliminary Environmental Information (PEI) Report considered impacts over a 60 year period and compared emissions against the UK 4<sup>th</sup> Carbon Budget (construction emissions) and the 5<sup>th</sup> and 6<sup>th</sup> Carbon budgets (for operation). This assessment has also been incorporated into Environmental Statement (ES) Chapter 14, which outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. It also describes an assessment of any likely significant climate factors in accordance with the requirements of the EIA Regulations and concludes in all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.</p>	N/A
200	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>The statement in paragraph 14.10.2 that the monitoring requirements set out in DMRB LA 114 Climate will be secured through the Ecological Management Plan (EMP), is key to all this. National Highways must commit to monitoring and sharing the data/evidence with the relevant bodies, and then to commit to appropriate mitigation that may become necessary, throughout the lifetime of the new road. The proposed idea of making quarterly GHG emissions returns during construction and operation of the road is an excellent gesture that needs to be embedded in any final positive decision for the road. The need to monitor requirements and take corrective action if required is also embedded in paragraph 14.10.6. This is applauded.</p> <p>However, the final sentence of paragraph 14.10.3 is in direct opposition to all this. It clearly reiterates that "It is not considered beneficial to monitor GHG emissions from road users during the operational phase of the proposed scheme". National Highways must clarify their position in this regard.</p>	<p>A commitment to report construction and operation stage greenhouse gas emissions to National Highways has been included within the ES (Document Reference 6.2). This commitment will be secured through the Environmental Management Plan (EMP) (see Table 3-2, Appendix 2.1, Document Reference 6.4).</p> <p>National Highways takes overall accountability for the management of corporate risks, including climate change. Therefore, National Highways will have responsibility for delivery of the net-zero plan whilst a central carbon team provides day-to-day coordination of our carbon performance, with clear actions and governance devolved to each directorate. National Highways has already gathered strong data on National Highways' carbon performance for many years. They have carried out a review of current data systems and will develop a plan to upgrade the processes, systems, and assurance, which will be complete for the end of 2024. Additionally, an annual report covering National Highways' progress and performance will be published.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
201	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>Paragraph 14.8.1 identifies that there are opportunities to reduce the production of Green House Gas (GHG) emissions, yet paragraph 14.8.2 only states that the proposed scheme will continue to seek to reduce GHG emissions as far as reasonably practicable to contribute to the UK's net reduction in carbon emissions and maximise its potential for reducing GHG emissions. No reference is made as to what these efforts might be. In fact, paragraph 14.8.5 makes clear that "no essential operational mitigation measures have been proposed" because ".....It is not considered appropriate to monitor GHG emissions from road users during the operational phase of the proposed scheme as Highways England does not have direct control over road user emissions". This is hugely disappointing. As National Highways is company wholly owned by the Secretary of State for Transport and is accountable to the Secretary of State for Transport, who is ultimately accountable to Parliament for the activities and performance of National Highways, then there is a direct link with policy and with the ability to change behavioural patterns. So, it cannot be accepted that National Highways "has no direct control over road user emissions". In fact, shouldn't the country be looking to National Highways to take a lead in the issue of road transport emissions? For example, does the proposal make provisions for electric charging points along its route, so as to encourage the use of electric vehicles; where is the promotion of cycling by establishing first class cycle ways to encourage local trips away from the use of cars and onto bicycles; where is the priority provision for additional public transport, active travel or promotion of car share schemes in the form of dedicated bus/car share lanes; and how about restricting speeds because it is well proven that lower speeds reduce emissions.</p>	<p>The provision of electric car charging points is outside of the scope of this scheme. Alternatives to the scheme including different modes of transport were considered as part of the option identification and appraisal process, leading to the Preferred Route Announcement in June 2019. This concluded that even substantial improvements to public transport provision, predominantly in the form of rail improvements, would not sufficiently reduce the number of vehicles to help address the identified problems along the A303/A358 corridor.</p> <p>The carbon assessment presented within ES has followed the guidance within DMRB LA114 Climate. The methodology and results of the traffic modelling is reported in more detail in the ComMA Report (Document Reference 7.4) submitted within the DCO application.</p>	N/A
202	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>Paragraph 14.9.10 makes clear that the proposed scheme is estimated to lead to an increase of approximately 1,963,000 tonnes of carbon dioxide during the modelled 60-year operational period (2023-2082), as compared to the baseline. This justifies the concerns that have been referenced above and does beg the question as to why National Highways' position is stated as not being "..... considered appropriate to monitor GHG emissions from road users during the operational phase of the proposed scheme". This is surely not helpful to the climate change debate.</p>	In line with DMRB LA 114 Climate, greenhouse gas emissions would be reported to National Highways quarterly during the operation stage.	N/A
203	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>Section 14.5 (Study area) does not appear to reference the loss of almost 30 hectares of woodland and its capacity to sequester carbon during the construction phase. The proposed scheme would in fact result in the destruction of 28 hectares of woodland, over 16 miles of hedgerow and vast areas of established habitat types that are key to climate regulation for the Somerset region and provide essential ecosystem services, from air quality to flood and erosion regulation. The removal of vast amounts of vegetation and trees adjacent to the A358 will drastically undermine carbon absorption from vehicle emissions and pollutants. Although replacement planting is provided for, this would take many decades to establish and in the intervening period, it would</p>	The ES Chapter 14 Climate (Document Reference 6.2) presents an assessment of land use change (including loss of woodland) and identifies, assesses and integrates measures to further reduce carbon through on or off-site offsetting and sequestration (e.g. through the use of renewable technologies). Additionally, National Highways set out how they will manage the green space for carbon removal, renewable generation, safety and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five-year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030.	N/A

			have an adverse effect on the projects ability to reduce its carbon footprint.		
204	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>Paragraphs 14.9.18–20 should really recognise that the increased frequency and intensity of extreme weather events referred to in Table 14-21, are less likely to occur if the Governments at a national and local level can get a good grip on climate change by seriously reducing carbon emissions. Reducing emissions from transportation will be a very good starting point. This section of the PEIR really needs to demonstrate how the operation of the road is going to contribute to seriously reducing emissions. So far, the text has failed to do so.</p>	With regards to carbon, both embodied and tailpipe carbon emissions have assessed using the methodologies identified in DMRB LA114 and the best information available to date.	N/A
205	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>Paragraph 14.2.16 sets out National Highway’s own “Net Zero Highways: 2030/2040/2050 plan”. This was published as recently as July 2021. This suggests that construction and maintenance emissions will only be ‘net zero’ by 2040, many years after this proposed scheme will be built. It also claims that road user’s emissions will only reach ‘net zero’ by 2050. This section goes on to outline key actions including “reducing emissions during construction, for example through the use of zero carbon construction products”. The Council does not believe that these such products currently exist and it is reasonable to assume that they are unlikely to exist until long after this scheme will have been built. On this basis, National Highways need to carefully demonstrate how the carbon emissions arising from this proposal are going to be minimised or avoided if the scheme goes ahead. This has not as yet been appropriately demonstrated. Likewise with paragraph 14.2.18, which states that “Highways England will work to reduce the carbon emissions associated with the construction, use, management and operation of the network and support the government’s ambition to achieve net zero carbon emissions by 2050”. Chapter 14 of the PEIR does not determine how will this be achieved on this scheme.</p>	<p>Paragraphs 14.2.16 and 14.2.18 of the PEI Report summarise National Highway’s plans. There is not currently funding/actions for the Department for Transport (DfT) “<i>Decarbonising Transport Plan and National Highways Net Zero highways 2030/2040/2050</i>” plan and therefore mitigation measures included within the plans, such as the use of zero carbon construction products, have not been embedded within the design of the scheme.</p> <p>All projects have a range of benefits and disbenefits on the environment, and it is unusual for a road project to meet all aspirations. Therefore, the measure of environmental responsibility is always a balanced amalgam of all environmental benefits and disbenefits. With regards to carbon, we have assessed both embodied and tailpipe carbon using the methodologies identified in DMRB LA114 and the best information available to date. Whilst the assessment presented in ES Chapter 14 Climate is made using a well-defined transport model, input from a construction partner has not occurred at this stage. Therefore, the construction assessment is based on a set of professional judgements regarding construction opportunities to reduce carbon. National Highways will update the assessment of both tailpipe emissions and construction carbon, and through the detailed design, seek to reduce embodied carbon through issues such as reused of geotechnical materials arising from the scheme, and reduction of vehicle emissions.</p>	N/A
206	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>At paragraphs 14.2.21 &amp; 22, it is acknowledged that the Councils have set out a framework to enable Somerset to become a carbon neutral county by 2030 and to have a Somerset which is resilient to the impacts of climate change. It is not clear how this proposed new road will assist in achieving this. The Somerset Climate Emergency Strategy notes that the rural nature of Somerset is a key factor in helping the County to mitigate the impacts of climate change. Section 7.5 of the strategy states “Somerset is a large rural County rich with fertile agricultural land, abundant with wetlands, peatland, trees and hedgerows which naturally sequester and store greenhouse gases including carbon dioxide present in the atmosphere. If invested in, protected and regenerated these natural resources within Somerset can help us mitigate against the increasing impacts of flooding and drought..... and help us become more resilient to the impacts of Climate”. The proposed scheme for the A358 would, however, result in the destruction of a significant amount of woodland and hedgerow as well as significant areas of established habitat that are key to climate regulation for the Somerset region. The proposal as it stands would drastically undermine carbon absorption from vehicle emissions and pollutants. Although woodland replanting is proposed as mitigation, this would be likely to take decades to establish</p>	<p>ES Chapter 14 Climate (Document Reference 6.2) presents an assessment of land use change (including loss of woodland) to identify assess and integrate measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., using renewable technologies). Additionally, National Highways set out how they will manage the green space for carbon removal, renewable generation, safety, and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five-year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030. The ES identifies in Chapter 14 Climate (Document Reference 6.2), the carbon emissions in construction and in operation. The latter identifies emissions from vehicles and maintenance operations.</p> <p>Discussions have been undertaken with Somerset Council with regard to the effect the scheme will have on climate change in Somerset. Discussions will continue through the DCO process.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			and it is unlikely that we have decades to reverse the impact of climate change. It would be some years before the new trees are sequestering the same carbon as the established trees. So the Council firmly believes that there needs to be an significant net gain of trees in the proposal. In these times of climate crisis and emergency, the Council believes that the only way that a major road- building project such as this can be acceptable is if a significant amount of new tree- planting and habitat creation is undertaken.		
207	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>There is a very big concern here that when operational the road will increase emissions and therefore the new Somerset unitary authority (to be established) will have to carry the forfeit for higher carbon emissions, when the existing authorities have all agreed that we must significantly lower them by 2030. The emissions generated through the operation of the scheme will be included within Somerset's area-wide transport emissions metrics, (BEIS, carbon reporting UK local authority and regional carbon dioxide emissions national statistics: 2005 to 2019 - GOV.UK (www.gov.uk) making Somersets transition to net zero even more difficult. Transport already currently contributes 46% of Somerset's overall emissions. Therefore, National Highways needs to give careful and detailed thought on how to reduce these additional carbon emissions.</p>	All projects have a range of benefits and disbenefits on the environment, and it is unusual for a road project to meet all aspirations. Therefore, the measure of environmentally responsibility is always a balanced amalgam of all environmental benefits and disbenefits. With regards to carbon, we have assessed both embodied and tailpipe carbon using the methodologies identified in DMRB LA114 and the best information available to date. Whilst the assessment is made using a well-defined transport model, input from a construction partner has not occurred at this stage. Therefore, the construction assessment is based on a set of professional judgements regarding construction opportunities to reduce carbon. The assessment of both tailpipe emissions and construction carbon will be updated during the next stage of the project, and through the developing design, seek to reduce embodied carbon through issues such as reused of geotechnical materials arising from the scheme, and reduction of vehicle emissions.	N/A
208	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate)</p> <p>Paragraph 14.2.21 specifically, makes reference to the Somerset Climate Emergency Strategy (2020), which was adopted by all five of the Somerset local authorities in 2020. However, nowhere in the chapter 14 does it reference the central aims of this strategy, nor how the proposal for the new road will address them. In summary, the main aims of the strategy as relating to the proposal for the A358, can be summarised as follows –</p> <ul style="list-style-type: none"> <li>• By 2030, carbon emissions generated on Somerset's roads are reduced through the change to electric vehicles, ultra-low emission commercial vehicles and an overall reduction in road use (no. of miles travelled);</li> <li>• By 2030, carbon emissions from transport are reduced by encouraging and facilitating behaviour change including: - reducing the number of single occupancy vehicle journeys undertaken by promotion of car sharing - increased public transport use - combining trips - replacing vehicular journeys with active travel modes (walking and cycling);</li> <li>• Climate Change adaptation plans have been developed and implemented to build and maintain the resilience of Somerset's transport infrastructure;</li> <li>• Transport inequality has been addressed by reducing the need for car travel through improved spatial planning, public transport options/availability and public service delivery;</li> <li>• All new developments will be constructed from sustainable, carbon neutral materials designed for reuse with circular economy principles in mind from as early a date as possible;</li> </ul>	National Highways is required by the National Policy Statement for National Networks (NPSNN) to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment considers impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). The assessment within the ES Chapter 14 Climate (Document Reference 6.2) reports carbon emissions associated to construction (including land use change) and operation, taking into consideration the change to electric vehicles. The ES also describes the mitigation measures which are proposed to reduce carbon emissions in construction and operation.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<ul style="list-style-type: none"> <li>• All new developments will reduce the need to travel to access key services and employment opportunities and facilitate sustainable movement patterns in and around them by default;</li> <li>• Biodiversity and bio-abundance are increased and natural processes including carbon storage, water quality and natural flood management across Somerset's natural environment are restored through a clear shared vision and spatial plan embedded in decision-making processes;</li> <li>• Flood risk is increasingly managed through nature-based solutions which also sequester carbon;</li> <li>• The Public and Private sectors understand what they can do to contribute to carbon reduction, and all organisations are actively working towards a carbon reduction culture which is embedded at all levels;</li> <li>• People and organisations consider Climate Change when making their decisions and embrace the positive changes that result; and</li> <li>• Somerset is recognised as a leader and exemplar for the Climate agenda regionally &amp; nationally.</li> </ul> <p>The Somerset Climate Emergency Strategy (2020) is now adopted by all 5 of the Somerset local authorities and so has a legal and statutory basis. The Council can see little evidence that it has been given due consideration by National Highways in their proposals for the A358.</p>		
209	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Climate Conscious Design</p> <p>Consideration should also be given to access to and the location of, future proofed petrol and electric/hydrogen re-charging stations with the possibility of local food store and cafes along the route, as we move to a zero carbon automotive infrastructure. Consideration will also need to be given to the technical requirements and infrastructure needed for such utility infrastructure for the siting of new forms of vehicle charging, fuelling stations, all of which will be needed.</p>	National Highways acknowledges the range of views expressed. The provision of electric car charging points is outside of the scope of this scheme.	N/A
210	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Climate Conscious Design</p> <p>There would appear to have been no consideration as yet about how different materials (and the colours of them) can affect heat absorption and radiation, which also contribute to global heating.</p>	Consideration of detailed design measures such as choice of materials and heat absorption has been included in the ES Chapter 14 (Document Reference 6.2) where the information is available at this stage of the design process.	N/A
211	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Digital Infrastructure</p> <p>The proposed new road should deploy state of the art future proofing technology in terms of journey times, hazards, collisions and blockages, to allow traffic opportunities to deviate to alternative routes. It also needs to become a genuinely smart route to support electric, hydrogen and autonomous vehicles with appropriate embedding of sensors and infrastructure along the ducting. This should include fibre optics and broadband fibre to provide the ducting for such future looking technologies, including zero carbon tracking / monitoring and air pollution along the whole route. The proposal also needs to address the possibility of providing the latest state of the art of design of the surfaces and SUDs drainage systems to deal effectively with increasing flash floods arising from climate change.</p>	<p>The technology proposed for use on the scheme will be in accordance with current National Highways design standards and requirements. The scheme proposes an additional CCTV camera at M5 junction 25 to monitor traffic flows, Emergency Roadside Telephones (ERTs) in public laybys and traffic counter loops for counting traffic flows.</p> <p>National Highways is also considering the possibility of Automatic Number Plate Recognition cameras. Technology such as autonomous vehicles is still emerging and no account of them is currently made. The new A358 route will form part of the strategic road network and the equipment and assets along the route are restricted to those necessary for the safe and efficient management and operation of the route. Provision of 3rd party digital infrastructure is therefore not proposed as part of the scheme, and this is in line with other major road schemes undertaken by National Highways.</p>	No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				The design of the drainage system will be in accordance with current National Highways design standards and requirements and a Flood Risk Assessment has been undertaken and is presented within ES Appendix 13.1 (Document Reference 6.4).	
212	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate)  It is noted in paragraph 14.9.16 that the carbon footprint of the proposed scheme is expected to increase at the Environmental Statement stage, due to more detailed information being available. This is likely to change the conclusions drawn and unlikely to change them positively.	With regard to carbon, both embodied and tailpipe carbon emissions have been assessed using the methodologies identified in DMRB LA114 and the best information available to date.	N/A
213	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate) - Walking and Cycling Access and Infrastructure  This strategic route should then extend across the M5 into Taunton. The Taunton Local Cycling and Walking Infrastructure Plan, Nexus 25 Local Development Order and the Carbon Neutrality and Climate Resilience Action Plan, all identify a need to deliver a strategic cycle connection between the town and the Gateway Park & Ride site east of the M5. Preliminary design solutions have suggested that this would be best delivered as an underpass and initial conversations with National Highways had suggested that this may be considered as part of the A358 proposals. However, it has not been identified. The walking and cycling infrastructure under J25 of the M5 has been vastly improved, but remains dangerous, insufficient and a major blocker to east-west movements. It is essential that any strategic route along the A358 then makes the final step linking across the M5 into Taunton, otherwise the point and success of the strategic route is called into question. Similarly, access across the A303 at the Ilminster end of the A358 must be considered.	The dedicated off-carriageway route for pedestrians and cyclists through M5 junction 25 and the Nexus 25 junction would be maintained. The potential pedestrian and cycle route between Blackbrook and the Nexus 25 development is not within the remit of this scheme, as it would involve land outside the scheme boundary. The existing route for pedestrians and cyclists through M5 junction 25 would be maintained as part of the scheme.  The existing shared use path at Southfields roundabout between the A358 (west) and A303 (south) arms would be widened and a signal-controlled crossing provided on the A358 (west) near to the services access. This would be an improvement for walkers and cyclists. A crossing of the A303 (south) is outside the scope of the scheme.  National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of scheme that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.	No
214	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate) - Walking and Cycling Access and Infrastructure  Whilst the scheme is clearly primarily about delivering increased capacity and resilience for road traffic, the Government's Gear Change document (as revised by the document - Gear Change: one-year-on review into the progress made towards achieving the goals of the Gear Change walking and cycling plan, published on 30th July 2021 - Department for Transport), sets a clear commitment to ensuring strategic A road schemes include appropriate provision for cycling, with specific reference to schemes coming through the Road Investment Strategy 2 programme. At present, the proposals completely fail in this regard. A key action in the transport sector report of the Somerset Climate Emergency Strategy refers to a need to "co-develop proposals with Highways England for use of cycling funds available under the Road Investment Strategy". The Council would be very happy to engage in how we can move forward in doing so. Further, the Council would expect any cycle infrastructure associated with the scheme to be designed towards compliance with Local Transport Note (LTN) 1/20.	Part of the design guidance for the scheme includes DMRB GD 300 and this requires consideration of alternative provision for cyclists. The provision can be either within the scheme corridor (online) or outside (offline). National Highways looked at the pros and cons between providing for cyclists online or offline and the case for offline is stronger, utilising existing infrastructure and allowing cyclists to pass through places of interest.  National Highways plans to make use of the local road network and new off-road routes to create a cycle route that would run from Henlade to Southfields roundabout. The scheme would serve cyclists in the local communities, giving people the opportunity to get out of their cars and onto bicycles for local journeys.  Gear Change states that the government will ensure new strategic A-road schemes include appropriate provision for cycling. There is a presumption that all new schemes will deliver or improve cycling infrastructure to the new standards laid down, unless it can be shown that there is little or no need for cycling in the particular road scheme. 'New standards' refers to Local Transport Note 1/20 (LTN 1/20).  Local Transport Note 1/20 (LTN 1/20) is primarily focused on delivering improvements in an urban environment. In developing the interurban	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				proposals for the A358, National Highways recognises the advice of LTN 1/20 but been unable to meet all of its recommendations.	
215	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Walking and Cycling Access and Infrastructure</p> <p>The highest profile location to require appropriate walking and cycling access across the new A358 is between Ruishton, the Gateway Park &amp; Ride site and the Nexus 25 site. There is likely to be significant pedestrian and cyclist movement here in the future and appropriate crossing of the new road must be factored in now to secure delivery and avoid future disruption. Stoke Road linking between Higher and Lower Henlade also should accommodate walking and cycling infrastructure, particularly if the road through Haydon is to remain open and used as a rat-run. The major junctions at Mattock's Tree Hill and Rapps/Ashill are large and incorporate double roundabouts with multiple arms to negotiate. They will, as designed, be blockers to movement across the A358. Multiple other footpaths which currently continue each side of the A358, and which can (with some danger) be crossed between at present, are also proposed not to have underpasses/diversions put in place. This serves to sever existing links and communities and opportunities for recreation.</p>	<p>In a scheme change since consultation, the roundabout at Nexus 25 would be replaced with a traffic signal-controlled junction. Pedestrian and cyclist facilities would be incorporated into the signal control to ensure future demand would be catered for and safe.</p> <p>Stoke Road realignment would retain the existing cross-section that it ties into, i.e., a highway with a grass verge on both sides.</p> <p>Mattock's Tree Green junction overbridge would include traffic-free tracks on both sides that would be segregated from road traffic and useable by walkers, cyclists, and horse-riders. Ashill junction overbridge would have footways on both sides and on the Ashill Road/Rapps Road approaches.</p> <p>Opportunities to provide crossings are maximised whilst recognising environmental and engineering constraints. All existing crossings of the scheme would be either retained or diverted and there would be no dead-end paths.</p>	N/A
216	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Walking and Cycling Access and Infrastructure</p> <p>The scheme should be seen also as a major opportunity to deliver a fast and direct strategic cycle route. A further key transport action in the Somerset Climate Emergency Strategy is to "develop proposals for improved cycling connections between towns". This is further expanded on in the Council's Carbon Neutrality and Climate Resilience Action Plan (September 2020), with action 224 to "Develop plans for a demonstrator cycle route along the A358 between Taunton-Ilminster focusing on the potential for e-bikes". At present, the scheme talks about delivering cycling connections along the length of the route, but it relies almost entirely upon utilising on-road provision through a mixture of using sections of (what will become) the old A358 and other connected sections of local rural roads. The route should be direct and traffic free in compliance with LTN1/20. The proposed solution is convoluted and unsatisfactory. The scheme includes a number of attenuation ponds with dedicated service roads identified. These service roads may present an opportunity to deliver sections of such a cycle route without significant additional cost. The cycle route and attenuation ponds should be further integrated into a multi-functional Green Infrastructure corridor.</p>	<p>Part of the design guidance for the scheme includes DMRB GD 300 and this requires consideration of alternative provision for cyclists. The provision can be either within the scheme corridor (online) or outside (offline). National Highways looked at the pros and cons between providing for cyclists online or offline and the case for offline is stronger, utilising existing infrastructure and allowing cyclists to pass through places of interest.</p> <p>Local Transport Note 1/20 (LTN 1/20) is primarily focused on delivering improvements in an urban environment. In developing the interurban proposals for the A358, National Highways recognises the advice of LTN 1/20 but been unable to meet all of its recommendations.</p> <p>The offline cycle route uses traffic-free tracks where feasible. Service roads are not generally an option for the cycle route because they would be fenced and not publicly accessible.</p>	N/A
217	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Walking and Cycling Access and Infrastructure</p> <p>The current approach appears to be about minimising footpath closures and avoiding significant severance of communities. It is vital that the objectives of the scheme are raised to deliver significant improvement of pedestrian/cyclist access along and over the A358 in order to improve links between communities, rather than minimising damage. The scheme proposes just 6 crossings of the new A358 which would be suitable for cyclists along its full X mile length. There are a few</p>	<p>The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. Taking into account scheme changes as an outcome of consultation, there are eight crossings that could use used by cyclists, namely:</p> <ul style="list-style-type: none"> <li>• Stoke Road overbridge</li> <li>• Mattock's Tree Green junction overbridge</li> <li>• Griffin Lane underbridge</li> </ul>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			additional underpasses for footpaths, but the overall number of opportunities to cross the corridor are very few.	<ul style="list-style-type: none"> <li>• Bickenhall Lane overbridge</li> <li>• Village Road overbridge</li> <li>• Sunnyside underpass</li> <li>• Ashill junction overbridge</li> <li>• Jordans overbridge.</li> </ul> <p>The above would all be accessible to walkers and horse-riders as well as cyclists. Additional crossings would be available at:</p> <ul style="list-style-type: none"> <li>• Fivehead River underbridge but the status of connecting rights of way is outside the scope of the scheme</li> <li>• High Bridge underbridge (unsurfaced bridleway so attractive to off-road bikes only).</li> </ul> <p>Opportunities to provide crossings are maximised whilst recognising environmental and engineering constraints.</p>	
218	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - General Comments</p> <p>It is noted that chapter 14 does not include an 'In-combination Climate Change Impact' (ICCI) assessment. Whilst this is a serious omission from the climate information presented in the PEIR, the reasons for this are understood. It is noted that an ICCI assessment will be produced for the Environmental Statement. This will need careful scrutiny by the Council and if it is not appropriate, detailed and satisfactory, then the Council will retain the right to object to this element of the proposal. In order to avoid such a stance, the Council urges early engagement with its specialists in this area.</p>	An in-combination climate change impacts (ICCI) assessment is presented within ES Appendix 14.2 (Document Reference 6.2) and draws on other environmental topic assessments to ensure that any effects of climate change which could exacerbate the identified environmental impacts are addressed.	N/A
219	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - Digital Infrastructure</p> <p>High quality gigabit capable digital connectivity underpins the movement towards carbon neutrality. Somerset is currently poorly provided for in this respect. The scheme presents an opportunity to deliver such connectivity along its length using a 'dig once' approach, bringing full-fibre connections closer to rural areas along its spine for future rural fibre connections to splice into, for mobile infrastructure to plug into, and for 5G connected and autonomous services to be enabled along its length.</p>	The new A358 route will form part of the strategic road network and the equipment and assets along the route are restricted to those necessary for the safe and efficient management and operation of the route. Provision of 3rd party digital infrastructure is therefore not proposed as part of the scheme, and this is in line with other major road schemes undertaken by National Highways.	No
220	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - General Comments</p> <p>The scheme as it stands looks to create additional capacity, primarily for cars with no adequate provision for additional public transport, active travel or promotion of car share schemes in the form of dedicated bus/car share lanes or cycle pathways. If capacity is the primary issue, encouraging and incentivising people to use public transport would instantly increase capacity on the network without the need for the scheme. So the question has to be asked about the extent to which National Highways has considered alternatives.</p>	<p>Alternatives to the scheme including different modes of transport were considered as part of the option identification and appraisal process, leading to the Preferred Route Announcement in June 2019. This concluded that even substantial improvements to public transport provision, predominantly in the form of rail improvements, would not sufficiently reduce the number of vehicles to help address the identified problems along the A303/A358 corridor.</p> <p>The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. The needs of walkers, cyclists, horse-riders and disabled users have been considered as part of the design development of the scheme, in line with the appropriate design standards.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
221	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - General Comments</p> <p>Nowhere in the document does it analyse the impact of the ban on the sale of new diesel and petrol cars, which has been moved forward to 2030. An analysis of this would surely help the new road's climate credentials.</p>	<p>To estimate greenhouse gas emissions associated to users, the assessment has utilised the DMRB Screening Tool (which references the UK Emission Factor Toolkit v10) for consistency with the air quality assessment. A 60-year assessment period has been considered.</p> <p>However, it is noted that the DMRB Screening Tool is limited in its projections to 2030. This means that for the assessment included within the PEI Report, any emission predictions after 2030 use 2030 assumptions. The DfT TAG methodology provides data on the potential uptake of electric vehicles which would likely substantially reduce emissions in the future. This would apply to both the Do-Minimum and the Do-Something scenarios equally and would therefore reduce any potential difference in emissions between the scenarios. Furthermore, this preliminary assessment likely represents a conservative scenario. This is discussed further in Section 14.9 of the PEI Report. The approach presented in the PEI Report has been reviewed for the ES (Document Reference 6.2) in light of any new guidance published, such as the Decarbonising transport: a better, greener Britain and take into consideration predictions on emissions up to 2050 instead of 2030 and the ban on the sale of new diesel and petrol cars.</p>	N/A
222	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - General Comments</p> <p>Finally, based on all of the arguments given above, the Council is of the opinion that the conclusion reached in Table 15-7 of chapter 15 (Preliminary significant effects and key receptors for environmental factors) that "no significant effects in relation to GHG emissions or vulnerability of the proposed scheme to climate change are predicted during the construction and operation phases", is considered to be misleading and possibly inaccurate. The same is the case in Table 16-1 (Summary of preliminary assessment of likely significant environmental effects). Whilst great play is made throughout chapter 14 of the PEIR of the potential for GHG emissions during the construction phase for the proposed A358, very little evidence is presented in relation to the projected 65% increase in vehicle use. Where is the evidence to prove that a 65% increase in road transport usage would result in 'no significant effects with regards to 'greenhouse gas emissions.....during the operation of the proposed scheme' [taken from the non-technical summary, page 41 – Climate, preliminary operation assessment]. The Council would be grateful if National Highways could revisit this chapter accordingly.</p>	<p>Users' greenhouse gas emissions presented within the PEI Report have been estimated using the DMRB Screening Tool (which references the UK Emission Factor Toolkit v10) for consistency with the air quality assessment. As noted in the Air quality Chapter of the PEI Report, traffic data that was used modelled years of 2023 and 2038 (and a 60-year assessment period overall).</p> <p>However, it is noted that the DMRB Screening Tool is limited in its projections to 2030. This means that for the assessment included within the PEI Report, any emission predictions after 2030 use 2030 assumptions. The DfT TAG methodology provides data on the potential uptake of electric vehicles which would likely substantially reduce emissions in the future.</p> <p>This would apply to both the Do-Minimum and the Do-Something scenarios equally and would therefore reduce any potential difference in emissions between the scenarios. Furthermore, this preliminary assessment likely represents a conservative scenario. This is discussed further in Section 14.9 of the PEI Report.</p> <p>The approach presented in the PEI Report has been reviewed for the ES (Document Reference 6.2) in light of any new guidance published, such as the Decarbonising transport: a better, greener Britain and takes into consideration predictions on emissions up to 2050 instead of 2030 and the ban on the sale of new diesel and petrol cars.</p>	N/A
223	Somerset West and Taunton		<p>Comments on PEIR - Chapter 14 (Climate) - General scheme compatibility with the Climate Emergency</p> <p>Despite this, the scheme does also bring potential for overall emissions reductions through improved economic sustainability for the area. An improved, resilient Strategic Road Network has the potential to make the South West, Somerset and Taunton in particular, more attractive to inward investment. Increased inward investment in line with our Economic Development Strategy would improve accessibility to better-paid employment opportunities and reduce the need for residents to commute out of the area in search of these. However, this needs to be balanced with protection of our natural capital, which is key to our economy now and will continue to be in the future. The proposals need</p>	<p>The economic benefits of the scheme, alongside the likely social and environmental impacts, are described and considered in the Case for the Scheme (Document Reference 7.1) in support of the DCO application. Overall, National Highways agrees with the premise of the response and considers the scheme will help achieve the stated economic ambitions for the local area and wider region. During the detailed design stage, subject to successful DCO consent, further information will become available with regard to construction management plans including use of local supply chains and sustainability targets.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			to explain and model how the scheme can help realise this potential. The scheme should look to build on the successes of Hinkley Point C in building and utilising local supply chains and securing an economic investment legacy in the area, linked to our Economic Development Strategy which is closely aligned with the Climate Emergency.		
224	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate) - General Comments  Although passing reference is made at paragraphs 14.2.21 and 22 to the climate emergency declared by all of the Somerset Local Authorities, it does not appear that this has been taken account of in any of the subsequent text of this section of the PEIR. For example, section 14.8 (Design, mitigation and enhancement measures) should be referencing this.	ES Chapter 14 Climate (Document Reference 6.2) refers to the Somerset's Climate Emergency Strategy.  National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment presented considers impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). In all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate. This assessment has also been included within the ES submitted as part of the A358 DCO application (Document Reference 6.2), and outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. ES Chapter 14 Climate describes an assessment of any likely significant climate factors in accordance with the requirements in the EIA Regulations and guidance within DMRB LA114 Climate.	N/A
225	Somerset West and Taunton		Comments on PEIR - Chapter 14 (Climate) - General Comments  Has the use of kinetic energy generation or solar PV or other renewable energy generating road system solutions been considered for this scheme? At the very least, such solutions should be used to power the road signage and other lighting needs of the road itself. There is no evidence to show that it has been taken into account, and it should have been.	The ES Chapter 14 Climate (Document Reference 6.2) presents an assessment of land use change (including loss of woodland) and identify, assess and integrate measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., through the use of renewable technologies). Additionally, National Highways set out how they will manage the green space for carbon removal, renewable generation, safety and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030.	N/A
226	Somerset West and Taunton		Comments on PEIR - Chapter 15 (Assessment of cumulative effects)  It will be important for National Highways to properly consider the impacts on all of the affected communities and provide bespoke mitigation to an appropriate standard once the detail of the scheme has been confirmed. This should not just take into account the individual impacts but the cumulative effects from all impacts on communities.	Cumulative effects are considered within Chapter 15 Assessment of cumulative effects of the ES (Document Reference 6.2).	N/A
227	Somerset West and Taunton		Comments on PEIR - Chapter 15 (Assessment of cumulative effects)  Somerset West and Taunton Council would welcome the development of a Community Fund, to address these issues, with a focus on bringing communities closer together and responding to the climate emergency. It is anticipated that applications to the Fund should be by constituted not for profit groups (not individuals) delivering charitable projects with public benefit. Similar funds have been set up in relation to other schemes, such as the 'A14 Cambridge to Huntingdon improvement scheme'. The Council is strongly supportive of this sort of initiative which should be in addition to any required mitigation and expects that National Highways will bring forward a similar scheme for the proposed project to the A358.	Cumulative effects are considered within Chapter 15 Assessment of cumulative effects of the ES (Document Reference 6.2).  National Highways are continuing to engage with Somerset Council in relation to potential future funding opportunities, if appropriate.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
228	Somerset West and Taunton		<p>Comments on PEIR - Chapter 15 (Assessment of cumulative effects)</p> <p>It is noted that most of the 'in-combination' and 'cumulative' effects that are envisaged, have been discussed in the various topic chapters that form the PEIR, rather than in chapter 15. For this reason, the Council has also commented on the 'in-combination' and 'cumulative' effects that are envisaged in its response to the various topic chapters that form the PEIR. However, there are also some more general considerations that will be discussed now.</p>	Cumulative and in-combination effects are considered within Chapter 15 Assessment of cumulative effects of the ES (Document Reference 6.2).	N/A
229	Somerset West and Taunton		<p>Comments on PEIR - Chapter 15 (Assessment of cumulative effects)</p> <p>The Council welcomes the £345 million Environment and Wellbeing ring-fenced fund, set out in the Road Investment Strategy (RIS) 2, and the commitment to "improve environmental outcomes, including on air quality, biodiversity, flood risk and ... green infrastructure solutions". We look forward to working with National Highways as the impacts become clearer and can look to apply the specific actions set out in RIS2, which include:</p> <ul style="list-style-type: none"> <li>• Reducing the impact of noise pollution;</li> <li>• Ensuring no net loss of biodiversity and progressing towards net gain;</li> <li>• To improve air quality;</li> <li>• Address severance issues;</li> <li>• Protect ancient woodlands and protected wildlife sites;</li> <li>• Protect heritage assets at risk or those negatively impacted upon by the SRN; and,</li> <li>• Support the shortage of lorry parking.</li> </ul>	National Highways acknowledge the comments raised and are continuing to engage with Somerset Council in relation to potential funding opportunities , if appropriate.	N/A
230	Somerset West and Taunton		<p>Comments on PEIR - Chapter 15 (Assessment of cumulative effects)</p> <p>A particular point to note is that the Council has previously promoted the need for an additional point of access onto the new road in the vicinity of either Capland or Bickenhall Lane. The current proposal, set out in Section 3 of the consultation, does not provide for this. Communities here will no longer be able to directly access the A358, as they previously have, as these points of access will be cut off. This means that not only are their existing accesses severed, but they will be unable to make proper use of the new road.</p>	<p>The scheme includes two grade separated junctions at Mattock's Tree Green and Ashill which are located at the optimum locations to provide connectivity to key routes either side of the scheme (for example the A378, Ashill Road and Rapps Road). Additional access points to the scheme for local roads would introduce additional potential conflict points and do not meet the requirements for a high performing dual carriageway designed to DMRB GD 300 standards. Local road diversions and improvements to existing local roads are proposed which are appropriate to the volumes of traffic using them and ensure that connectivity is provided to the two proposed grade separated junctions.</p> <p>An assessment of the traffic impacts and the benefits of adding in the additional junctions proposed by the Community of Parishes group has been undertaken in the traffic model. This shows that the slip roads would be very lightly trafficked and would benefit very few users. The addition of these slip roads would present poor value for money and are therefore not included within the scheme proposals. Additionally, such junctions would also have further environmental impacts.</p>	N/A
231	Somerset West and Taunton		<p>Comments on PEIR - Chapter 15 (Assessment of cumulative effects)</p> <p>Finally, it is noted in paragraph 15.5.5 that National Highways are following the advice of DMRB LA 104 (Environmental assessment and monitoring notes) that cumulative effects should be assessed when the</p>	National Highways acknowledge the response of the Council. The Environmental Impact Assessment has been completed and the results reported in the ES Chapter 15 Assessment of cumulative effects (Document	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			conclusions of individual environmental factor assessments have been reached and reported. Therefore, cumulative effects are not reported in this PEIR, but will be assessed and reported in the Environmental Statement. So, once again, the Council must reserve judgement on this issue and reserve the right to comment further to the 'new' information or details that may arise. It is hoped that National Highways, would seek to inform the locally affected Councils on this issue before the application for a Development Consent Order is formally submitted, so that both National Highways and the Councils have the opportunity to consider and address matters further, all of which can save time when it gets to the Public Inquiry.	Reference 6.2). This includes an assessment of cumulative and in-combination effects.	
232	Somerset West and Taunton		<p>Comments on PEIR - Chapter 15 (Assessment of cumulative effects)</p> <p>In accordance with the NPS it will be important for National Highways to properly consider the impacts on all of the affected communities and provide bespoke mitigation to an appropriate standard. This should not just take into account the individual impacts but the cumulative effects from all impacts on communities. The Preliminary Environmental Impact (PEI) Report states that the 'Rochdale Envelope' has been applied, in accordance with PINS Advice Note Nine: Rochdale Envelope:</p> <p>"The 'Rochdale Envelope' approach is employed where the nature of the Proposed Development means that some details of the whole project have not been confirmed (for instance the precise dimensions of structures) when the application is submitted, and flexibility is sought to address uncertainty."</p> <p>It is accepted that at the current stage in the design process, absolute certainty about construction timing, phasing and methodology is not possible. However, as the design develops and greater certainty is gained, Somerset West and Taunton Council request proactive discussions with National Highways about these impacts.</p>	<p>The ES (Document Reference 6.2) includes revised assessment of potential impacts resulting from the design as submitted for the DCO application. The design has been informed by consultation with SWT (as was), and Somerset Council (from 1 April 2023), and with other organisations and members of the public. National Highways have engaged with the SWT (as was), and Somerset Council (from 1 April 2023) throughout the development of the scheme, and this is documented in the Statement of Common Ground with Somerset Council (see Statement of Commonality Document Reference 7.3). Consultation with Somerset Council will continue as the design, examination and construction process continues.</p> <p>An assessment of cumulative effects is presented within ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2).</p> <p>A detailed description of the project is provided within ES Chapter 2 The project. Any limitations or assumptions are made this approach is documented within ES Chapter 4 Environmental assessment methodology and the technical chapters. (Document Reference 6.2)</p>	N/A
233	Somerset West and Taunton		<p>Comments on PEIR - Chapter 15 (Assessment of cumulative effects)</p> <p>It is noted in paragraph 15.3.12 that for Somerset West and Taunton Council,</p> <ul style="list-style-type: none"> <li>• approved planning applications (EIA development only) within 3.1 miles (5 km) of the proposed road scheme; and</li> <li>• site allocations within adopted planning policy within 3.1 miles (5 km) of the proposed road scheme,</li> </ul> <p>have been included in the cumulative impact assessment. However, it is noted, as referenced elsewhere in the Council's response, that no allowance appears to have been for the Monkton Heathfield 2 development. This proposal is expected to be submitted as an application in November 2021. Whilst it will almost certainly be EIA development, it is not yet approved, is not formally allocated within the local plan and would be right at the edge of the 5 kilometre search boundary. However, the Council believe that it would be unfortunate if it was not taken into account because of its size, because of the advanced nature of pre-application enquiries and because of its importance to the Council's 5 year supply of housing land. The Council</p>	The Monkton Heathfield 2 development has been included in Chapter 15 Assessment of cumulative effects of the ES (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			believe that Monkton Heathfield 2 should, therefore be referenced in Appendix 15.1 (Consideration of cumulative effects), Table 15-8 (Preliminary short listed 'other developments' with the potential to result in cumulative impacts) and taken into account.		
234	South Somerset District Council	1.3.14	Introduction An updated National Policy Statement for National Networks (NPSNN) is expected in 2023 SSDC notes that should it come into force prior to the determination of the proposed scheme an assessment of compliance with the new policy will be made. Depending on the outcome this may then require further input from SSDC.	The ES (Document Reference 6.2) has been produced in accordance with the current National Policy Statement for National Networks (NPSNN). See the Case for the Scheme (Document Reference 7.1) which documents the schemes compliance with the NPSNN.	N/A
235	South Somerset District Council	2.6.29 to 2.6.32	The Project In general agreement with the investigation and risk methodology. The Soils Material Management Plan (SMMP) is a contamination risk based process and requires sign off by the contaminated land officer or equivalent. Early liaison is recommended on this aspect for initial approval.	A Material Management Plan has been produced and included as an Annex of the EMP (Annex E, Appendix 2.1, Document Reference 6.4). The Material Management Plan will be updated at construction phase by the contractor.	N/A
236	South Somerset District Council	2.6.35	The Project A low noise surface is referred to – further detail should be provided on how this surface is constituted and how it contributes to noise reduction.	The scheme will include a low noise surface to minimise noise generation in all locations. Detailed modelling of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. This is reported in the ES Chapter 11 Noise and vibration (Document Reference 6.2). Detailed information regarding the baseline survey is reported in Appendix 11.3 to inform the assessment.	N/A
237	South Somerset District Council	2.6.9	The Project The mitigation measures will be described within the Detailed Archaeological Mitigation Strategy and Overarching Written Scheme of Investigation. It is agreed that this is a sensible approach to implementation of a mitigation strategy.	National Highways acknowledge support for the proposed mitigation strategy.	N/A
238	South Somerset District Council	2.5.71	The Project The Environmental Mitigation Plan and the fly-through video highlight the use of environmental/noise barriers along extensive lengths of the road corridor. This element of the scheme design is not covered in paragraph 2.5.71. The design of these barriers needs to be confirmed as part of the DCO submission (rather than as a matter of detailed design for the Requirements) as this will be relevant to determining their impact on the setting of heritage resources - please see comments relating to paragraph 2.6.7.	The fly-through video presented at the statutory consultation in 2021 showed the initial proposed locations for noise barriers (bund and fencing). The design has been further developed for the DCO Application submission to finalise the heights and extents of noise barriers.  The noise assessment presented in the ES includes the impacts with the noise mitigation included. The impact of all mitigation on heritage resources has been assessed within the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
239	South Somerset District Council	2.5.27 to 2.5.28	The Project An alternative option for the Capland Lane link will be within the District of South Somerset if the 'improvement of local roads to improve flood resilience' includes the two pockets of the scheme boundary focused on the north end of Stock's Lane and the bridge in Stewley. The options appraisal will need to consider any direct impact on the potential non-designated built heritage resources of the stone bridge on Stewley Lane and the bridge/culvert (unknown) and guidepost at the north end of Stock's Lane, and the impact on the setting of all local heritage resources. The potential non-designated built heritage resources are not currently included in the baseline condition data – please see the	A review of potential impacts on heritage assets is an intrinsic aspect of the development of the scheme design, and this has been undertaken throughout the design process.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			comments relating to paragraphs 6.6.12 and 6.6.16 to 6.6.19 of Chapter 6. (The guidepost is outside of the District of South Somerset).		
240	South Somerset District Council	2.6.7	The Project  The embedded woodland and hedgerow creation is supported as a means to soften the visual impact of the scheme on heritage resources (although the impact on the setting of every heritage receptor will have to be judged on its merits). Of potential concern is the impact of embedded hard landscape features, in particular the extensive use of environmental/noise barriers in the absence of sufficient fill material for screening bunds (para. 2.5.39). The use of noise barriers, and their design, will need to be assessed in relation to the impact on the setting of sensitive heritage resources.	The embedded woodland and hedgerow creation form part of the landscape and biodiversity mitigation for the scheme; it is not designed to confer any specific mitigation for heritage impacts. However, the impact of all mitigation on heritage resources has been assessed within the ES, both adverse and beneficial (see Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
241	South Somerset District Council	Consultation	Biodiversity  The applicant is advised to consult with Somerset Bat Group and Somerset Wildlife Trust for comment.	National Highways confirms that Somerset Wildlife Trust and the Somerset Bat Group have been consulted as part of the scheme design development process.	N/A
242	South Somerset District Council	4.3.2	Environmental Assessment Methodology  The study area for non-designated built heritage resources is considered inadequate. Please see the comments against paragraph 6.5.6 of Chapter 6.	Following consultation at PEI Report stage, the study area was modified for some aspects of the cultural heritage assessment (see ES Chapter 6 Cultural heritage, Document Reference 6.2). The study area for non-designated assets remains as 250m for all non-material assets but has been extended to include all those within a 1km distance for the site for all non-material assets which fall within the Zone of Visual Influence (ZVI).	N/A
243	South Somerset District Council	4.3.9 to 4.3.11	Environmental Assessment Methodology  A desktop assessment and field survey of potential non-designated built heritage assets within the existing and an extended study area is required. Please see the comments against paragraph 6.6.12 and 6.6.16 to 6.6.19 of Chapter 6.	The comments against paragraphs 6.6.12 and 6.6.16 to 6.6.19 of Chapter 6 of the PEIR are acknowledged. The study area used in the ES for non-material assets has been extended to include all non-designated assets within 1km where they lie within the ZVI. A desk study of all of these assets has been completed and is presented in Chapter 6 of the ES (Document reference 6.2).	N/A
244	South Somerset District Council	4.3.11	Environmental Assessment Methodology  The two archaeological surveys are on-going, and the consultants are engaging with the appropriate LPA and statutory advisors (the SWHT and Historic England). Site visits to monitor the trial trenching will take place on a weekly (or otherwise arranged) basis. Desk-based assessment, Geophysical survey and Trial trenching are the professional standard methodologies applied to prospection for previously unknown archaeological assets and are the appropriate techniques for assessing the archaeological potential of the impact area.	National Highways have undertaken extensive geophysical survey and trial trenching to support the desk-based assessment also undertaken. The results have been reported within the ES Chapter 6 Cultural Heritage (Document Reference 6.2) and supporting appendices ES Appendix 6.5 Geophysical survey report and ES Appendix 6.6 Archaeological trial trenching report (Document Reference 6.4).	N/A
245	South Somerset District Council	General	Air Quality  The Council is largely in agreement with the methodologies and areas covered. Parts of the EMP that cover the likes of dust management should be dynamic and follow changes in ground conditions and construction methods.	National Highways acknowledge broad agreement for the air quality assessment methodology utilised and the areas covered within assessment.  The Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4) contains measures to mitigate the impacts of construction dust using best practice guidance.	N/A
246	South Somerset District Council	5.3.1	Air Quality  It is acknowledged that a simple method of assessment was appropriate as the proposed scheme has a low impact.	National Highways welcome support for the air quality assessment methodology utilised.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
247	South Somerset District Council	5.2.7	Air Quality The South Somerset Environment Strategy, 2019 is not local development document or part of the development plan for South Somerset. It is an internal strategy document. Any references to the development plan for South Somerset throughout the PEIR should only refer to the adopted Local Plan – South Somerset Local Plan 2006-2028, March 2015.	National Highways acknowledge comments made in relation to the South Somerset Environment Strategy; references to this document have been updated in the ES (Document Reference 6.2).	N/A
248	South Somerset District Council	5.9.7	Air Quality Although the impacts of construction dust on local air quality are deemed to be temporary, neutral and not significant, dust management should still be considered in the Environmental Management Plan and attached to the ESA along with mitigation measures. It should be anticipated that local conditions can and will differ to that modelled especially as detailed construction measures, haulage traffic are not known at this stage. This is acknowledge in paragraph 2.6.6 of the PEIR.	The impact of construction dust and construction traffic has been assessed and reported in ES Chapter 5 Air Quality (Document Reference 6.2). Best practice mitigation measures relating to construction dust and construction traffic have been included in the Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4).	N/A
249	South Somerset District Council	Table 6.5	Cultural Heritage (Archaeology) The assessment of impacts on buried archaeological heritage assets are reasonable and the mitigation strategies outlined are appropriate.	National Highways acknowledge support for the proposed assessment methodology and mitigation strategies.	N/A
250	South Somerset District Council	6.8.2	Cultural Heritage (Archaeology) The options of preservation by record (i.e. excavation and recording) of archaeological heritage assets is a recognised mitigation within development projects. Preservation in-situ is only appropriate where heritage assets are of high significance and their continued; preservation can be assured.	National Highways acknowledge support for the proposed assessment methodology and mitigation strategies.	N/A
251	South Somerset District Council	6.2.14	Cultural Heritage (Archaeology) Paragraph 6.2.14 refers to the “South Somerset Heritage Strategy”, this is incorrect the document is called the South Somerset Historic Environment Strategy <a href="https://www.southsomerset.gov.uk/your-council/your-council-plan-and-strategies/historic-environment-strategy/">https://www.southsomerset.gov.uk/your-council/your-council-plan-and-strategies/historic-environment-strategy/</a>	This reference has been corrected within Chapter 6 Cultural heritage of the ES (Document Reference 6.2).	N/A
252	South Somerset District Council	Summary (Archaeology)	Cultural Heritage (Archaeology) The suite of techniques described in the PEIR reflect the appropriate methods for detection, identification and assessment of buried archaeological heritage assets. The use of DMRB as an assessment tool is in line with other infrastructure projects and is a suitable methodology to appraise the significance of impacts. The identification and assessment of HLCAs is appropriate.	National Highways acknowledge support for the proposed assessment methodology.	N/A
253	South Somerset District Council	6.1.1	Cultural Heritage (Archaeology) The methodology (DMRB) is an accepted method to assess impacts on buried archaeology on infrastructure projects. DMRB sets out the techniques to apply to assets to understand their significance and to qualify the potential impacts on assets.		N/A
254	South Somerset District Council	6.6.20	Cultural Heritage (Archaeology) The initial assessment of potential for archaeological survival within the scheme boundary is broadly high. This is a reasonable assessment. The periods with the most potential are described and are on current		N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			knowledge are realistic. The assessment surveys described in 4.3.11 will further clarify the assets present on the scheme and enable the significance of assets to be described and any potential impacts assessed through the application of DMRB.		
255	South Somerset District Council	6.6.21	Cultural Heritage (Archaeology)  The division into 8 Historic Landscape Character Areas is a sensible method of cataloguing distinct areas. The identification of these 8 HLCAs is accepted based on their shared characteristics.		N/A
256	South Somerset District Council	6.5.6	Cultural Heritage (Built Environment)  A 250 metre buffer for all non-designated heritage resources is considered inadequate.  In conjunction with the observations on paragraph 6.3.3, some of the non-designated heritage resources may be of 'Medium' value (recognised at a regions scale). Thus, they could be subject to a 'Moderate' magnitude of impact if their setting makes a key contribution to their significance or appreciation and the proposed scheme is assessed as being highly intrusive.  This scenario could occur beyond a 250 metre buffer, although unlikely beyond the 1 km buffer set for designated heritage resources. The number of Local Heritage List candidate assets with a strong contribution from their setting within a 1 km buffer is likely to be minimal but to merit assessment.  The DMRB LA 106 Revision 1 does not set a limit on the study area for 'other cultural heritage resources' apart for being within the zone of visual influence.  A 250 metre buffer is accepted or all other non-designated heritage resources (of Low and Negligible value) as the construct of the Significance Matrix in DMRB LA 104 Revision 1 (Table 3.8.1) would not register a significant effect for a non-designated heritage resources without physical loss or severe damage.  An additional buffer of 1 km is required for the non-designated heritage resources of 'Medium' value and the baseline date for this study area assessed in line with the comments relating to paragraphs 6.6.12 and 6.6.16 to 6.6.19.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
257	South Somerset District Council	6.5.6	Cultural Heritage (Archaeology)  The study area of 250m is appropriate in terms of assessing adverse effects on non-designated heritage assets with archaeological interest (i.e. buried archaeology).	National Highways acknowledge support for the proposed assessment methodology.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
258	South Somerset District Council	6.6.24	Cultural Heritage (Archaeology) The assessment of the value of non-designated heritage assets is appropriate based on current knowledge.		N/A
259	South Somerset District Council	6.6.25	Cultural Heritage (Archaeology) The value of 6 HCLAs as low and two HLCAs with potential medieval activity as medium is appropriate.		N/A
260	South Somerset District Council	6.3.1	Cultural Heritage (Archaeology) Local guidance issued by the South West Heritage Trust (SWHT) is utilised in the Assessment methodology as well as the expected professional guidance issued by the Chartered Institute for Archaeologists and Historic England.	National Highways acknowledges this comment.	N/A
261	South Somerset District Council	6.3.3 and Table 6-2	Cultural Heritage (Built Environment) With regards to Table 6-2, the 'Medium' category of 'Value of resources' should include those built heritage and designed landscape non-designated heritage resources of regional and county significance, in addition to 'some non-designated heritage remains'. These resources would ideally be identified in a local heritage list. The Somerset Local Heritage List is currently emerging.  Candidates for the draft Local Heritage List should be identified through this decision-making process, and submitted to the LPA for confirmation prior to the submission of the DCO. These heritage resources should then be treated as being of 'Medium' value. With regards to Table 6-2, the 'Medium' category of 'Value of resources' should include those built heritage and designed landscape non-designated heritage resources of regional and county significance, in addition to 'some non-designated heritage remains'. These resources would ideally be identified in a local heritage list. The Somerset Local Heritage List is currently emerging.  Candidates for the draft Local Heritage List should be identified through this decision-making process, and submitted to the LPA for confirmation prior to the submission of the DCO. These heritage resources should then be treated as being of 'Medium' value.  Also regarding Table 6-2, Grade II Registered Parks or Gardens should be included within the 'High' value category of heritage resources; being of national value. Grade II Registered Parks and Gardens are included on the National Heritage List for England, and the Historic England selection guides for the Register of Parks and Gardens state that registered sites of all grades are considered to be of a sufficiently high level of special historic interest to merit a  national designation. Furthermore, paragraph 5.131 of the NPSNN makes no distinction between the value of Grade II Listed Buildings and Grade II Registered Parks and Gardens.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES (see Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.)).  Table 6-2 has been revised to include all Registered Parks and Gardens as high value heritage resources.	N/A

263	South Somerset District Council	6.5.2	<p>Cultural Heritage (Built Environment)</p> <p>The proposal for a 1 km buffer from the proposed scheme boundary for designated heritage resources is accepted, with the addition of particularly sensitive heritage resources captured in the Zone of Theoretical Visibility.</p>	National Highways acknowledges support for the proposed assessment methodology.	N/A
264	South Somerset District Council	6.6.12 and 6.6.16 to 6.6.19	<p>Cultural Heritage (Built Environment)</p> <p>The baseline data for non-designated built heritage resources (standing buildings and structures) is likely to be incomplete for the scheme boundary and a 250 metre buffer study area, and would on the current model be incomplete for non-designated built heritage resources of local heritage list potential within a 1 km buffer study area.</p> <p>The baseline condition for non-designated built heritage resources is set out in Appendix 6.1 and Appendix 6.2. The gazetteer is based on the entries in the Somerset HER. The HER is light on built heritage entries, especially farmstead and domestic buildings, which are normally added following their assessment for planning applications. Whereas industrial and infrastructure heritage resources are well represented following the activities of the local industrial archaeology group.</p> <p>The shortfall of historic farmstead and domestic buildings is demonstrated by the table below, which is an extract of all the extant non-designated built heritage resources within the 250 m buffer study area. This shortfall is despite the buffer encapsulation numerous historic farmsteads, individual buildings and hamlets (as identifiable from the 1902 2nd Edition OS). Very few historic buildings are identified in the gazetteer: only two former smithies; one farmhouse; one former tollhouse; and two former industrial building complexes. Only one other non-designated building, not included on the Somerset HER, is identified as having potential heritage interest, and flagged due to its proposed demolition: Bath Cottage, West Hatch (see section 4.2.1 of Appendix 6.1)</p>	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>(Table provided with extant non-designated built heritage resources within the 250m study area buffer).</p> <p>The baseline data for non-designated built heritage resources needs to be expanded with an assessment of:</p> <p>a) For the scheme boundary and a 250 m buffer, all potential non-designated built heritage resources, or cluster of resources, as evident from the 1902 Second Edition OS.</p> <p>b) For a 1 km buffer (including the 250 m buffer), all potential non-designated built heritage resources that fall with the Zone of Theoretical Visibility or would be subject to significant adverse noise impact, and satisfying the draft Selection Criteria of the Somerset Local Heritage List Project.</p> <p>The subsequent list of non-designated built heritage resources for these study areas should be shared with the LPA prior to the DCO submission, including for confirmation of which non-designated built heritage resources would be considered candidates for the emerging Somerset Local Heritage List.</p>		
265	South Somerset District Council	6.7.3 to 6.7.8	<p>Cultural Heritage (Built Environment)</p> <p>The report states that operational vibration has been scoped out of the noise topic assessment, and paragraph 6.7.8 states that the impact of the construction activities would be 'temporary, of limited duration and reversible'. It is unclear if construction vibration (compaction plant, rock-breaking machinery, impact piling, etc.) is scoped in or not. From our experience of considering mineral and highway activities, we are aware that traffic and ground-borne vibration can result in building damage; initially subtle (opening up of small cracks, plasterwork damage), which can be the forerunner of later structural failure. The seismic vibration from the 'bump down' of HGVs on an uneven road surface being of note. Historic buildings will often have elements of delicate or decayed fabric and poorly bedded masonry, which may not conform to standard empirical models.</p> <p>Construction and operational vibration should be included in the assessment of impacts, and a programme of monitoring implemented during the construction stage for sensitive historic building receptors.</p>	<p>National Highways acknowledges the concern regarding the impact of vibration on heritage assets. Consideration of noise and vibration effects on cultural heritage assets has been included within the ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4) and mitigation relating to construction techniques addressed where appropriate.</p> <p>Vibration construction mitigation measures are documented within ES Chapter 11 Noise and vibration (Document Reference 6.2) and within the Environmental Management Plan (ES Appendix 2.1, Document Reference 6.4).</p>	N/A
266	South Somerset District Council	Table 6-5	<p>Cultural Heritage (Built Environment)</p> <p>A record of the parish for each of the heritage resources in this and other tables would be useful.</p>	The ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) includes the data 'as received' from the Historic Environment Record.	N/A
267	South Somerset District Council	6.8.8	<p>Cultural Heritage (Built Environment)</p> <p>Mitigation measures may be required for non-designated built heritage resources following an extension of the baseline, as outlined in the above comments.</p>	All required mitigation is included within ES Chapter 6 Cultural heritage (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
268	South Somerset District Council	6.2.10	Cultural Heritage (Built Environment)  With regards to paragraph 203 of the NPPF, the same comment is applicable as made above against paragraph of 6.2.4 of Chapter 6.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES (see Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)).	N/A
269	South Somerset District Council	6.4.1	Cultural Heritage (Built Environment)  The planned historic building assessment of the non-designated Bath Cottage, West Hatch (outside of the District of South Somerset), is supported. However, there are other historic buildings, not ear-marked for demolition, that warrant an assessment. Please see the comments for paragraph 6.2.4, 6.6.12, and 6.6.16 to 6.6.19 of Chapter 6.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES (see Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4)).	N/A
270	South Somerset District Council	6.6.1	Cultural Heritage (Built Environment)  In line with the comments for paragraph 6.5.6, the baseline condition for the study area for non-designated heritage resources of local heritage list potential is considered inadequate.		N/A
271	South Somerset District Council	6.6.22 to 6.6.25	Cultural Heritage (Built Environment)  The values assigned to Grade II Registered Parks and Gardens and to non-designated built heritage resources of regional and county interest (candidate assets for the Somerset Local Heritage List) are challenged. Please refer to the comments against paragraph 6.3.3 and Table 6-2.	Chapter 6 Cultural heritage of the ES (Document Reference 6.2), and its supporting appendices (Document Reference 6.4), has been updated in line with these comments.	N/A
272	South Somerset District Council	6.4.2	Cultural Heritage (Built Environment)  Photomontages will be an equally valuable tool for assessing the impact on the 'setting' of sensitive heritage assets. Agreement on key views from sensitive designated and non-designated heritage resources, and the production of additional photomontages, should be undertaken with the LPA prior to the DCO submission.	Consultation with the relevant stakeholders has been undertaken by National Highways and is reflected in the ES submitted within the DCO (Document Reference 6.2). See ES Figure 7.4 ZTV and representative viewpoints and ES Figure 7.7 Viewpoint photographs.	N/A
273	South Somerset District Council	Appendix 6.3	Cultural Heritage (Built Environment)  A review of the gazetteer of heritage resources will be undertaken when the baseline data is complete.  A record of the parish for each of the heritage resources in this and other tables would be useful.	The ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) includes the data 'as received' from the Historic Environment Record.	N/A
274	South Somerset District Council	6.9	Cultural Heritage (Built Environment)  A review of the construction and operational significant effects will be undertaken when the baseline data and assessment are complete.	National Highways has assessed the impact of construction noise and vibration on heritage assets within the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
275	South Somerset District Council	6.6.21 to 6.6.25	Cultural Heritage (Built Environment)  Comments on the Historic Landscape Character are submitted under Cultural Heritage (Archaeology).	National Highways notes this comment.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
276	South Somerset District Council	Appendix 6.4	<p>Cultural Heritage (Built Environment)</p> <p>A review of the impact assessment or each of the heritage resources will be undertaken when the baseline data and assessments are complete. Where tree cover is sites as a screen, it should be borne in mind that deciduous trees are without leaf for 6 months of the year and individual trees, small clumps or narrow belts do not provide a good screen during this period. This needs to be taken into considered for the assessment.</p> <p>It would be helpful to have a combined version of the Magnitude of impact (Table 1-1) and the Significance of effect (Table 1-2). This would only require the addition of the significance of effect columns to Table 1-1.</p> <p>A record of the parish for each of the heritage resources in this and other tables would be useful.</p>	National Highways notes the comments made. Summer and winter views are incorporated into the ES Chapter 7 Landscape and visual effects (Document References 6.2 and ES Figure 7.7 Viewpoint photographs). National Highways has presented the tables as requested by SSDC in the ES Appendices (Document Reference 6.4). The ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) includes the data 'as received' from the Historic Environment Record.	N/A
277	South Somerset District Council	6.11.9	<p>Cultural Heritage (Built Environment)</p> <p>An extension of the baseline data for non-designated built heritage resources is required, as outlined in the comments for paragraphs 6.6.12 and 6.6.16 to 6.6.19.</p>	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES (see Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
278	South Somerset District Council	Tables 7-9 to 7-11	<p>Landscape</p> <p>An issue with Chapter 7 is that there is no description of where each viewpoint is actually located. There is a list of 45 locations, but no detail as to where each one might be. Tables 7-9, 7-10 and 7-11 need to be revised to include information on the locations.</p>	The photograph locations are shown on ES Figure 7.4 ZTV and representative viewpoints are shown on ES Figure 7.7 (Document Reference 6.3) and this is noted in ES Chapter 7 Landscape (Document Reference 6.2).	N/A
279	South Somerset District Council	Figure 7.3	<p>Landscape</p> <p>Figure 7.3 Visual receptors and barriers Sheet 3 of 3 (as an example) is not very useful in that it is at 1:25,020 (which is not a recognised scale) and does not include the road alignment. This means they are of very little use in gaining any understanding of the impact. Road alignment needs to be added and they need to be to the same scale (1:5,000) as all the other tree / planting drawings.</p>	<p>National Highways note the scale shown as 1:25,020 in the PEIR figure as an error, although 1:25,000 is a recognised scale and the difference (0.08%) would not make enough to change any interpretation or measurements from this drawing and its purposes.</p> <p>Each plan shows a key plan locating the sheet location in relation to the scheme alignment, sheet three is located to the south-west of the alignment to show the AONB context and distant viewpoints to the scheme, the road alignment is not shown on this sheet as it is too far away from the viewpoints when presented at this scale.</p> <p>Drawings at a scale of 1:5,000 would provide little context for the purpose of landscape and visual impact assessment, and 1:25,000 is a recognised scale for this type of information. At 1:5,000 there would be many drawings across the study area without the scheme shown, and providing little landscape/visual context. The tree/planting drawings are at 1:5,000 as they relate only to elements within or adjacent to the scheme boundary, while</p>	N/A

				other plans relate to the landscape and visual context within the wider study area.	
280	South Somerset District Council	Figure 7.4	<p>Landscape</p> <p>Figure 7.4 ZTV and Representative Viewpoints Sheet 1 of 3 (for example) is at 1:25,000 which is much too large. These need to be much smaller scale, suggest 1:5000 as with the other plans (trees/planting) so there can be a direct 'comparison'.</p> <p>The viewpoint locations need to be presented so the reader can see what is already there, what will be lost and what the new scheme might look like. This will assist in the discussion around landscape character as well as matters of visual impact.</p> <p>In addition, this set of plans includes coloured ZTV information as solid blocks which completely covers the information underneath, so again, this does not assist in gaining a true understanding of what will change.</p>	<p>The viewpoint photographs on ES Figure 7.7 (Document Reference 6.3) are annotated to note the position of the A358 where it can be seen from stated locations to illustrate the nature of change in a range of contexts and distances.</p> <p>Drawings at a scale of 1:5,000 would provide little context for the purpose of landscape and visual impact assessment, 1:25,000 is a recognised scale for this type of information. At 1:5,000 there would be many drawings across the study area without the scheme shown and providing little landscape/visual context. The tree/planting drawings are at 1:5,000 as they relate only to elements within or adjacent to the scheme boundary, while other plans relate to the landscape and visual context within the wider study area.</p>	N/A
281	South Somerset District Council	Figures 7.8 and 7.9	<p>Landscape</p> <p>Figure 7.9 Viewpoint Photographs (for example) are described as being 'annotated' images. The only annotation on each of these photographs is an arrow pointing out the name of a property or elements such as named woodlands. There is no annotation or indication as to where the roadworks are to happen or any indication as to which (or how) any of these elements may be affected. They are fine photographs, but do not add much to an understanding of the likely impact of the scheme. Information such as a coloured line (to an appropriate level of transparency) showing the new route needs to be added onto each photo. All documentation must be produced on the premise that the viewer is not familiar with the area and so needs a degree of direction.</p> <p>It is fully acknowledged that there are significant engineering, geometrical and physical constraints limiting the flexibility of the proposed route and therefore dictating the changes to the existing route. It is therefore most important that there is a fine scale identification and assessment of those receptors that will be most affected. Appropriate mitigation can then be designed to deal with these in the most appropriate manner. It appears on the plans that the mitigation scheme is dealing with the land affected by and the land leftover from the scheme as opposed to being designed to deal with, say, the changes in the view from any existing properties (either singular or as a group).</p> <p>It would be very helpful if there was a more detailed and graphically presented analysis of the impact on local receptors. This can then be cross-referenced to the mitigation / landscape strategy i.e. this is what is changing and this is what is being proposed to address it.</p> <p>Figure 7.8 Environmental Mitigation Plan Sheet 5 of 9 (as an example) is very helpful in respect of the detailed soft landscape scheme.</p>	<p>It would not be legible to present all information on singular drawing, for example what is there now and what is proposed, and the figures should be read as a series. Representative viewpoint photographs have been prepared within the ES (Figure 7.7, Document Reference 6.3) from stated locations to illustrate the nature of change in a range of contexts and distances.</p> <p>The environmental mitigation design for the scheme has been further developed since statutory consultation to take account of ecological survey data, consultation with stakeholders and changes to the scheme design (see ES Figure 7.8 Environmental Masterplans, Document Reference 6.3). The scheme includes extensive hedgerow, trees, scrub, and woodland creation along the length of the A358. All new planting would use native species that reflect the species composition of those habitats lost to the construction of the scheme and those of greatest wildlife benefit. The Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4) including Annex D Landscape and Ecological Management Plan (LEMP) details the proposed mitigation and enhancement measures. This document also details management prescriptions and monitoring protocols for all habitat creation areas to ensure the successful establishment and long term viability of the habitats created. This should be read in conjunction with the Ecological Mitigation Strategies presented in ES Appendices 8.24-8.35 (Document Reference 6.4).</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>However, as with most of the other overlay type images, the top layer is, in many areas, included as a solid colour, so it is not possible to see what is being replaced by what. The purpose of this stage of the scheme is to inform the reader / viewer as to what the changes are going to be, and this information does not come across.</p> <p>There are vast swathes of grass being proposed. There is an opportunity to plant significant quantities of trees. Unless there is a need for visibility splays, then all other areas within the longer term 'road corridor' should be planted with a range of native shrub / native woodland mix planting.</p> <p>SSDC planting guidance is somewhat outdated and all proposed planting should follow current (Forestry based) best practice / best advice regarding the choice of species, size of plants, spacing, management and so on. Planting must be resilient, robust and appropriate for the area.</p>		
282	South Somerset District Council	7.11.2	<p>Landscape</p> <p>The conclusions of the study are unsurprising i.e. at 7.11.2 it notes that the greatest impact where the road deviates from the existing or where new structures are installed. We would expect more detail to explain where and why this happens.</p>	This is the summary section of the report, and the detail for specific locations and receptors is located elsewhere within the Chapter and Appendices. However, the comment is noted and National Highways have sought to provide a more informative summary to the ES Chapter 7 Landscape and visual effects (Document Reference 6.2)	N/A
283	South Somerset District Council	7.6.69	<p>Landscape</p> <p>Noted that a description of the baseline condition of each of the 45 viewpoints is included at Appendix 7.2. However, 7.2 is Topography and Drainage.</p>	To provide clarity, ES Figure 7.2 Topography and drainage (Document Reference 6.3) and ES Appendix 7.2 Visual baseline (Document Reference 6.4).	N/A
284	South Somerset District Council	General - Tree Planting	<p>Landscape</p> <p>The Council would welcome a positive focus upon making the most of the opportunity that this project provides to secure the establishment of thousands of new trees and shrubs. Not only as an attempt to mitigate for losses, but also to partially offset the carbon intensive nature of the future maintenance of the Highway verges and embankments.</p> <p>This might be achieved by carefully designing-out to a bare minimum, the surface area of grassland that requires a continual maintenance regime in-accordance with the principles of The Woodland Trusts 'Trees or Turf' report of May 2011.</p> <p>Furthermore, we would encourage the use of good forestry practice, using a diverse and resilient taxonomical palette to suit the rather inhospitable environmental conditions likely to be provided by the steeply sloped and machine- compacted earth-moulding.</p>	The environmental mitigation within the highway estate will be designed and delivered in accordance with National Highways standards, which respond to the balance needed between operational requirements, safety, and the environment.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Meeting the exponential challenges of climate change and increased pests & diseases requires a different approach to the usual conventions most typically employed by those within the Landscape industry.		
285	South Somerset District Council	General	Landscape  Whilst the underlying methodology follows guidance, the diagrams and tables are presented at a scale and in a manner that is not very helpful. It is suggested that they be presented in the same scale as the planting / trees (for example). They need to include more clarity on the location and type of landscape receptor and a clearer analysis of what is actually changing in any given location and what is being proposed to rectify any resulting harm.  It would be extremely helpful to include some (even basic) mapping and diagrams within the main body of Chapter 7.	Drawings at a scale of 1:5,000 would provide little context for the purpose of landscape and visual impact assessment, 1:25,000 is a recognised scale for this type of information. At 1:5,000 there would be many drawings across the study area without the scheme shown and providing little landscape/visual context. The tree/planting drawings are at 1:5,000 as they relate only to elements within or adjacent to the scheme boundary, while other plans relate to the landscape and visual context within the wider study area.  National Highways have addressed the points raised in relation to the presentation of information within the ES Chapter 7 Landscape and visual effects (Document Reference 6.2) to enable understanding of impacts.	N/A
286	South Somerset District Council	7.11.6, 9 and 11	Landscape  The simple list of 'very large' or 'large effects' at 7.11.6, 7.11.9 and 7.11.11, after 71 pages of assessment, appears a very 'method' driven conclusion. It would helpful to include a more nuanced and detailed set of conclusions.	National Highways note the comment and have sought to provide a more informative summary to the Chapter 7 Landscape and visual effects of the ES (Document Reference 6.2).	N/A
287	South Somerset District Council	Dormouse Bridges	Biodiversity (Design)  • The ES should detail and justify how dormouse bridge proposals will (in addition to other measures) 'provide an equivalent level of connectivity and dispersal function to that lost' as claimed in the PEIR.  • Specifications of proposed bridges is required.	The Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4) including Annex D Landscape and Ecological Management Plan (LEMP) details the proposed mitigation and enhancement measures. This document also details management prescriptions and monitoring protocols for all habitat creation areas to ensure the successful establishment and long term viability of the habitats created. This should be read in conjunction with the Ecological Mitigation Strategies presented in ES Appendices 8.24-8.35 (Document Reference 6.4). The mitigation strategy for hazel dormouse is presented within ES Appendix 8.30 (Document Reference 6.4).  Details of the proposed bridge would be confirmed at detailed design stage, subject to successful DCO consent; they would be tied into suitable habitat types to allow dormice to cross the scheme at specific locations chosen to maximise connectivity.	N/A
288	South Somerset District Council	Biodiversity Net Gain	Biodiversity  The applicant is expected to use DEFRA's Biodiversity Metric (currently version 3.0) to demonstrate how mitigation proposals will account for loss of habitats (particularly the wealth of NERC Act (2006) Priority Habitats that are present within the application site). A BNG assessment was not submitted with the PEIR, and it is expected that this will be submitted with the ES at a later stage.  The Environment Bill has now received Royal Assent and is enacted.	The Defra Biodiversity Metric 3.1 (published April 2022) has been used to account for habitat losses and gains on the project. The results of this assessment are provided in the Biodiversity Metric Report found within Appendix 8.6 of the ES (Document Reference 6.4).	N/A
289	South Somerset District Council	Beavers	Biodiversity (Habitats and Protected Species)  Eurasian beavers (Castor Fiber) are present within Somerset and neighbouring counties, and with the species likely to be given 'Native' recognition much like in Scotland it is suggested that this species should be considered as part of the EIA. Especially with the sensitivity of the	The potential for beaver to be present along the scheme is considered as part of the Future Baseline section within ES Chapter 8 Biodiversity (Document Reference 6.2). If beaver do come to colonise this part of Somerset, they would benefit from the mammal crossings designed for otter and badger. Whilst B.R.A.T. might be a useful tool (although designed for	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>area to flooding, this links to the comment above whereby suitable mammal structures should be incorporated into the design on all water crossings for the proposed scheme.</p> <p>Using Beaver Restoration Assessment Tool (B.R.A.T) areas of potential beaver establishment can be predicted and so those key points could be particularly protected from future high risk impacts such as damming and tree felling.</p>	<p>North American species and landscapes), the potential impacts of damming and tree-felling is also likely to be affected by beaver density, size of territories etc, which at present is unknown and which would also be dependent on habitat suitability/availability (within and beyond the scheme) not only now but also in the future. Given the number of unknown variables at this stage, National Highways consider that any future flood risk resulting from beavers on watercourses and adjacent land within the scheme could be adequately managed through habitat management and working in consultation with local landowners.</p>	
290	South Somerset District Council	Breeding Birds	<p>Biodiversity (Habitats and Protected Species)</p> <p>There is concern with the judgement of the breeding bird assemblage to be of local 'local importance'. Furthermore, there is a strong argument that the loss of approximately 28ha of woodland and over 16 miles of hedgerow would undoubtedly result in a likely significant effect to breeding birds. Further details should be submitted within the ES that outline how the proposed provision of habitat creation and bird boxes prior to construction would alleviate these effects, noting the significant timeline it would take for replanted habitats to establish and that not all breeding birds utilise boxes.</p>	<p>National Highways have completed further breeding bird surveys in 2021, and based on this additional information, the breeding bird assemblage was found to contain species populations of local and county level importance. Areas of existing vegetation of high biodiversity value including woodland, individual trees and hedgerows have been retained or protected where possible or minimised through design.</p> <p>Details of the breeding bird surveys are presented in ES Appendix 8.12 Ecological Baseline Report – Breeding birds (Document Reference 6.4). Ecological mitigation strategies have been prepared for various habitat and species to support ES Chapter 8 Biodiversity (Document Reference 6.2), these include breeding birds (see ES Appendix 8.28, Document Reference 6.4), which detail any requirements for pre-commencement surveys. The assessment of effects on breeding birds is presented within ES Chapter 8 Biodiversity (Document Reference 6.2).</p> <p>As part of the DCO application, National Highways has prepared an Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4) that details the proposed mitigation and enhancement measures, which includes extensive areas of grassland, hedgerow and woodland creation. Alongside this extensive habitat creation, the details of nest box schemes are provided within EMP. Nest boxes scheme have been specifically designed for farmland/hedgerow bird species, starling, woodland bird species, tawny owl/little owl/stock dove/jackdaw, and grey wagtail, the locations of which have been informed by the breeding bird surveys. Nest box schemes would be provided prior to construction where possible. For those species that do not use nest boxes, the habitat retention and creation is considered sufficient to avoid significant impacts.</p>	N/A
291	South Somerset District Council	Barn Owl	<p>Biodiversity (Habitats and Protected Species)</p> <p>The applicant is advised to explore opportunities to mitigate for loss of potential barn owl breeding sites away from the proposed scheme footprint, as well as encouraging the species to disperse from the vicinity of the A358.</p> <p>Highways are a leading cause of barn owl fatalities as the chapter acknowledges. Provisioning of barn owl boxes with suitable landowners at least 10km away from the proposed scheme is recommended.</p>	<p>ES Chapter 8 Biodiversity and supporting appendices present the results of barn owl surveys completed by National Highways in 2021 and an assessment of the impact of the scheme on barn owls and measures to mitigate these impacts.</p> <p>Details of the barn surveys are presented in ES Appendix 8.14 Ecological Baseline Report – Barn owl (Document Reference 6.4). Ecological mitigation strategies have been prepared for various habitat and species to support ES Chapter 8 Biodiversity (Document Reference 6.2), these include barn owl (see ES Appendix 8.29, Document Reference 6.4),</p> <p>The Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4) details measures to be taken during both the construction and operational phases of the scheme to protect barn owls. Measures designed into the scheme (based on published research) focus on discouraging barn owls from the live carriageway and include tall hedgerows/treelines retained where possible along the highway boundary, and the creation of new vegetated screens (hedgerows and treelines) to</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>encourage any barn owls within the scheme to fly high over the live carriageway.</p> <p>Habitat creation and management has been designed to reduce the extent of suitable barn owl foraging habitat (rough grassland) directly alongside the live carriageway, and where new barrier planting would take time to establish, the use of fencing has been considered. Although mitigation measures have focused on identified barn owl traffic hotspots, measures have also been considered for the full length of the scheme. No barn owl boxes would be provided within the scheme boundary and no potential barn owl breeding sites fall within the site clearance boundary (no loss of potential breeding or resting/roosting sites). A barn owl box is proposed west of the scheme, located 1.5km from the main carriageway, to encourage barn owls to nest further away from the scheme.</p>	
292	South Somerset District Council	Impact Assessment	<p>Biodiversity</p> <ul style="list-style-type: none"> <li>• A complete response to impacts and mitigation proposals will be provided upon submission of the ES, noting many ecological surveys are on-going and the PEIR lacks cumulative impact assessment.</li> <li>• When describing impacts to habitats, the applicant is advised to quantify habitat loss and additionally categorise respective habitat loss in relation to cause for destruction. The PEIR is not clear in explaining the reasons behind significant amounts of habitat loss; labelling as 'construction' is not sufficient. Considering the abundance of arable and agricultural farmland in the area, destruction of Priority Habitats to accommodate temporary work zones such as borrow pits, access roads, and site compounds would not be supported. Location convenience for such work zones is not considered acceptable.</li> <li>• There are concerns with potential short-, medium-, and therefore long-term impacts to designated wildlife sites, biodiversity, and ecosystem functioning. The application supports what could be considered a nationally important level of biodiversity, including species that have endured drastic national declines, European Protected Species, and NERC Act (2006) Priority Species. Protected and Priority Species include otter, dormouse, breeding birds (including Schedule 1 species of the Wildlife and Countryside Act (1981) such as kingfisher and barn owl), bats (including four rare European Annex II species), great crested newts, brown hare, pole cat, hedgehog, harvest mouse, badger, water vole, reptiles, fish, aquatic and terrestrial invertebrates (including the nationally rare brown hair streak butterfly), and common toad. These species are supported by the 27 different habitat types recorded within the application site, which includes Priority Habitats. It is considered that the adequacy of proposed mitigation relies heavily in the long-term when habitats would be established, which for woodland as an example will take decades. Paragraph 174 of the NPPF 2021 states that 'planning policies and decisions should contribute to and enhance the natural and local environment by (inter alia): protecting sites of biodiversity; recognising the wider benefits from natural capital and ecosystem services; minimising impacts on and providing net gains for biodiversity'.</li> </ul>	<p>The PEI Report detailed initial results of ecological surveys and an indication of the anticipated impacts of the proposed scheme at that stage within the design process. An extensive suite of ecological surveys has since been completed, the results of which have informed the scheme design, with measures taken to avoid and reduce impacts where possible. The ES Chapter 8 Biodiversity and its supporting appendices (Document Reference 6.2 and 6.4) details the results of these surveys, an assessment of the impact of the scheme and measures to mitigate these impacts.</p> <p>The PEI Report detailed the anticipated impacts of the proposed scheme at that stage within the design process. The ES provides greater detail and description of the source of impacts upon ecological receptors. Efforts have been made throughout the design process to reduce the impact of temporary features such as compounds, stockpiles and haul routes upon ecological features.</p> <p>National Highways have developed a scheme design which includes extensive areas of grassland, hedgerow, and woodland habitat creation, as well as new water channels and ponds. All new planting would use native species that reflect the species composition of those habitats lost to the construction of the scheme and those of greatest wildlife benefit. Habitat creation areas have been designed to form a network of habitats that would act as ecological dispersal corridors once established and facilitate the safe movement of wildlife through the landscape. Where possible habitat creation has been used to reconnect otherwise isolated parcels of semi-natural habitats, including small woodland blocks, within the local landscape along the A358. In key locations along the scheme, the creation of habitats will start in advance of construction works to allow as much time as possible within the construction window for habitats to develop.</p> <p>As part of the DCO application, National Highways has prepared an Environment Management Plan (EMP) (ES Appendix 2.1 Document Reference 6.4). The EMP including Annex D Landscape and Ecological Management Plan (LEMP). The EMP details the proposed mitigation and enhancement measures. This document also details management prescriptions and monitoring protocols for all habitat creation areas to ensure the successful establishment and long term viability of the habitats created. This should be read in conjunction with the Ecological Mitigation Strategies presented in ES Appendices 8.24-8.35 (Document Reference 6.4).</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
293	South Somerset District Council	Veteran Trees	<p>Biodiversity (Habitats and Protected Species)</p> <p>The chapter confirms two veteran oak trees would be lost to the proposed eastern carriageway, and a veteran black poplar may be impacted via drainage reconfiguration. Black poplars are considered one of the most endangered native trees in the UK and hold significant cultural and biodiversity value. Adverse impacts to this black poplar should be avoided entirely. The proposed 'veteranisation' of mature trees (involving wounding a healthy mature tree to encourage rot features) retained within the proposed scheme and wider landscape as a form of mitigation for veteran tree loss would not be supported.</p>	<p>The environmental mitigation presented on ES Figure 7.8 Environmental Masterplan (Document Reference 6.3) details how lost trees and vegetation will be mitigated. Areas of tree/woodland/screening planting and hedgerows with trees are proposed in locations where they are deemed to be required and most effective in mitigating impacts, however numbers of proposed trees are not quantified at this stage of design as the mixes, densities, and layouts will be developed at the detailed design stage, subject to successful DCO consent.</p> <p>The Habitat Mitigation Strategy, ES Appendix 8.24 (Document Reference 6.4) provides details on the unavoidable loss of two veteran trees at the eastern end of the scheme and measures proposed to compensate for this loss. These measures include the safeguarding of other veteran trees, for example through the installation of fencing to avoid poaching by livestock, in proximity to the scheme as well as reducing competition around mature and over-mature trees that comprise future veteran resource across the local landscape.</p> <p>Further measures proposed include the selective 'veteranisation' of existing semi-mature trees, which would be undertaken in collaboration with experienced arboriculturalists, and would be utilised in situations such as Jordan's Park and Bickenhall Wood to provide habitat to allow continuation of the important communities of flora and fauna that rely on the unique conditions created by the decay features associated with veteran trees.</p> <p>This matter is discussed in the Statement of Common Ground with Somerset Council (See Statement of Commonality Document Reference 7.3).</p>	N/A
294	South Somerset District Council	Scattered Trees	<p>Biodiversity (Habitats and Protected Species)</p> <p>Loss of scattered trees should be quantified to enable justification of 'local importance'.</p>	<p>Existing and impacted trees and groups are quantified in the Tree Survey and Arboricultural Impact Assessment presented in ES Appendix 7.3, Document Reference 6.4). The comment on local importance of scattered trees is considered in the preparation of ES Chapter 7 Landscape and visual effects (Document Reference 6.2).</p>	N/A
295	South Somerset District Council	Brown Hairstreak	<p>Biodiversity (Habitats and Protected Species)</p> <p>Further clarification is required for the judgement of the brown hairstreak population to be of 'local importance'. This colony breeder is one of Britain's rarest butterflies and is evidently breeding across almost half of the application site hedgerows. It is advised the ES sets out mitigation that includes the translocation of ovum to suitable receptor sites prior to destruction of hedgerows.</p>	<p>It is recognised that brown hairstreak is a species of principal importance and restricted in range beyond the south and western UK; however, Somerset is one of the strongholds for this species and whilst the species was found throughout suitable habitats across the scheme, this is as would be expected, given the habitats present and the location of the scheme.</p> <p>National Highways have designed a scheme that includes extensive areas of woodland, scrub and hedgerow creation. Species planting mixes will incorporate blackthorn, the food plant of brown hairstreak. Extensive hedgerow improvements are proposed along the length of the scheme, this will take the form of a reduced cutting regime to encourage a denser and taller hedgerow network to the benefit of a range of species including brown hairstreak. Hedgerow translocations are proposed in key locations along the scheme, with the intention of providing continuity of the available habitat structure. These measures would offer continued egg laying opportunities for brown hairstreak in the landscape while the new areas of habitat creation establish.</p> <p>The ES Chapter 8 Biodiversity includes an ecological mitigation strategy for terrestrial invertebrates which incorporates brown hairstreak butterfly (see ES Appendix 8.35, Document Reference 6.4). Brown hairstreak butterfly information is provided in ES Chapter 8 Biodiversity (Document reference</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				6.2), with a brown hairstreak ecological baseline report provided in ES Appendix 8.23 (Document Reference 6.4).	
296	South Somerset District Council	8.8.57	Biodiversity (Design)  The monitoring of, and requirement for long-term maintenance of otter protection fencing, as well as the potential requirement for beaver protection fencing is not currently listed in the mitigation.	Otter-proof fencing has been specified and included within the scheme design at watercourse crossing points (bridges and culverts) to prevent otter access to the live carriageway and to direct otters towards mammal crossing structures (e.g., dry ledges or dry tunnel). Details of the fencing and its maintenance are included within the EMP (Appendix 2.1, Document Reference 6.4). National Highways considers that this fencing would also benefit beavers.	N/A
297	South Somerset District Council	Environmental Mitigation Plan (Figure 7.8)	Biodiversity (Design)  In line with Somerset County Council's emerging Tree Canopy Strategy, we recommend increasing the tree cover proposed within the landscape design/ mitigation for the scheme (see Environmental Mitigation Plan). This would be able to be adjusted once the stated Tree Canopy Strategy has established a relevant goal for the county or specific region.  In addition, the Somerset Local Nature Partnership 'Nature Recovery Network' maps should be used to inform additional mitigation proposals in relation to wildlife corridors. Data from this development should be shared with the  Local Nature Partnership in order to inform the Nature Recovery Network mapping with finer detail.	National Highways have developed a scheme design which includes extensive areas of hedgerow, scrub, tree and woodland habitat creation, as well as grassland, new water channels and ponds. All new planting would use native species that reflect the species composition of those habitats lost to the construction of the scheme and those of greatest wildlife benefit. As part of the DCO application, National Highways has prepared an EMP (Appendix 2.1, Document Reference 6.4) that details the proposed mitigation and enhancement measures. This document also details management prescriptions and monitoring protocols for all habitat creation areas to ensure the successful establishment and long term viability of the habitats created.  The environmental mitigation for the scheme has been designed to improve connectivity between existing and proposed areas of semi-natural habitats along the scheme. Offsite mitigation has been proposed in key locations to bolster isolated blocks of semi-natural habitats helping to ensure the long term viability of these habitats and the species communities they support. As an example, large blocks of woodland have been created around the Griffin Lane area on either side of the A358 to complement the belt of woodland that runs through the landscape in this part of Somerset, extending from the levels south to the Blackdown Hills. This approach is in line with the aims of the Nature Recovery Network strategy.	N/A
298	South Somerset District Council	8.8.36	Biodiversity (Design)  Paragraph 8.8.36 The mitigation states that "for every pond lost to construction of the proposed scheme at least one would be created".  Other major infrastructure projects such as the A303 Stonehenge scheme and HS2 have proposed a minimum of 2 ponds are to be created for each pond lost due to the proposed development. We suggest that consideration be given to the provision of additional biodiversity-specific ponds.	Since statutory consultation, mitigation strategies for amphibians and habitats have been further developed, as detailed within the ES Appendix 8.25 Ecological Mitigation Strategy – Aquatic Environment (Document Reference 6.4). This includes for the provision of a minimum of two wildlife ponds for each pond lost to construction of the scheme. As detailed within ES Appendix 8.33 Ecological Mitigation Strategy – Amphibians (Document Reference 6.4), these will be designed to a size and profile and with a planting mix primarily for the benefit of amphibians but with benefits for a range of other species as well.	N/A
299	South Somerset District Council	Appendix D, Stage 2 Preliminary Ecological Appraisal	Biodiversity (Design)  This is dated 2016, which appears to be out of date (over 3 years) and should be updated to ensure all habitats along the route of the proposed scheme have been accurately identified and suitably surveyed.	National Highways have completed updated habitat surveys (2021) of the entire scheme, using the UK Habitat Classifications, and the UK Habitat Classification report is provided in ES Appendix 8.1 (Document Reference 6.2).	N/A
300	South Somerset District Council	Table 8-11	Biodiversity (Design)  The area of ancient woodland impacted at Bickenhall Wood should be calculated and listed in Table 8-11 for clear reference when interpreting the conclusion. Currently it only mentions the impacts in relation to 'root-protection' of the Ancient Woodland but the area of this impact should be provided for clarity.	ES Chapter 8 Biodiversity (Document Reference 6.2) includes quantification of the area at Bickenhall Wood impacted by the scheme.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
301	South Somerset District Council	8.9.67	<p>Biodiversity (Design)</p> <p>The PEIR states “it is recognised that orchid translocation has a high failure rate”. Yet the impact is stated as neutral and not significant because it assumes a successful translocation. This impact has been downplayed and the risk of failure should be considered within the residual impact as there is no guarantee that the orchids will survive.</p> <p>Similarly, there is no evidence provided in the PEIR to confirm that the orchids are only of local significance, which forms part of the conclusion.</p>	<p>An Ecological Mitigation Strategy – Habitats (ES Appendix 8.24, Document Reference 6.4) is submitted with the DCO application, and this details the proposed approach to the successful translocation of orchids on the scheme, including any remedial measures as required.</p> <p>As the scheme design and associated impacts have developed since statutory consultation, the impact assessment upon orchids has been updated in the ES accordingly. The proposed location of receptor areas within the scheme has also further developed since statutory consultation as shown on ES Appendix 8.24 Habitat mitigation strategy (Document Reference 6.4) and ES Figure 7.8 Environmental Masterplan (Document Reference 6.3).</p>	N/A
302	South Somerset District Council	Mammals	<p>Biodiversity (Design)</p> <p>The first two pages of the Environmental Mitigation Plan lack suitable crossing points for mammals, such as badger, deer, and brown hare (sheet 1 and 2). It is advised the new line incorporates mammal culverts to alleviate the inevitable effects of fragmentation from the proposed scheme in the land parcels between the existing A358 and the proposed new line. There is also a lack of suitable crossing points for mammals in the southern region of the proposed scheme, noting there are no crossing points shown on sheet 8 and 9.</p>	<p>Every watercourse crossed by the alignment will have a mammal crossing provided, in addition, there will be four standalone badger tunnels. Locations of mammal crossings are shown on General Arrangement Plans (Document Reference 2.5a).</p>	N/A
303	South Somerset District Council	Ancient Woodland	<p>Biodiversity (Habitats and Protected Species)</p> <ul style="list-style-type: none"> <li>• The avoidance of direct loss of ancient woodland is welcomed, and it is expected that this position will not change should the proposed scheme progress or evolve.</li> <li>• Ancient woodland is an irreplaceable habitat as the chapter acknowledges.</li> </ul>	<p>The scheme alignment has been designed to avoid ancient woodlands, since statutory consultation the Bickenhall Lane bridge has been relocated approximately 165m south of Bickenhall Wood ancient woodland so as to avoid direct impacts upon the ancient woodland. Following discussions and a site visit with Natural England an access track off the Bickenhall Lane bridge has been designed to avoid significant impacts upon the ancient woodland, details are provided within the ES (Document Reference 6.2). Where woodlands are located adjacent to construction areas, appropriate buffers would be established (including a 15m buffer between area of works and woodland edge) and fencing utilised to maintain root protection zones as detailed within ES Appendix 7.3 Tree Survey and Arboricultural Impact Assessment report (Document Reference 6.4) as part ES Chapter 7 Landscape and visual effects (Document Reference 6.2).</p>	Yes
304	South Somerset District Council	11.3.6	<p>Noise and Vibration</p> <p>SSDC notes that a baseline study was not carried out due to lockdown and as such instead was based on modelled outputs. A true baseline study is important to make certain that mitigation if proposed, is not only proportionate and effective, but is indeed needed. It is noted that a baseline survey is planned and will be included in the ES.</p>	<p>A baseline survey has been undertaken and full details of the noise survey are reported in Appendix 11.3 of the ES Appendices (Document Reference 6.4). The results from the baseline survey have informed the baseline (dominimum) noise modelling. The primary method for assessing potential noise impacts is via noise prediction as required by DMRB LA 111 and the Noise Insulation Regulations 1975. This enables testing of the existing road alignments against the future road alignments and is based on predicted traffic flows with and without the scheme in the opening year and a future year (+15 years). It also enables testing of a range of mitigation scenarios to ensure that mitigation is effective and proportionate.</p> <p>Road traffic noise levels are predicted using the method detailed in the Department of Transport technical memorandum - Calculation of Road Traffic Noise (CRTN) 1988 together with minor updates to methodology as outlined in DMRB LA 111 Appendix A. This is the standard method for calculation of road noise in the UK and there has been extensive validation of the method.</p>	N/A
305	South Somerset District Council	11.4.1 to 11.4.4	<p>Noise and Vibration</p>	<p>The effects of the scheme in relation to construction noise have been assessed. This is reported in the ES Chapter 11 Noise and vibration</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			There is a general theme that details of construction methods were largely not known and so no real assessment could be made. This assessment is still needed. No details were available of construction travel and haulage routes are provided. The Council looks forward to seeing more detail.	(Document Reference 6.2), which also set out the measures that National Highways proposes to mitigate adverse noise effects. National Highways has also produced an Environmental Management Plan (EMP) (Appendix 2.1, Document Reference 6.4), which includes further detail in relation to the control of construction related noise and vibration including a commitment to prepare a Noise and Vibration Management Plan.	
306	South Somerset District Council	General/Summary	Noise and Vibration  Whilst the general methodologies and outcomes are reasonable and in line with industry best practice etc. they are based on a lot of modelled rather than primary data. Real time data is needed for an accurate assessment of potential affects and effective mitigation.	The primary method for assessing potential noise impacts is via noise prediction as required by DMRB LA 111 and the Noise Insulation Regulations 1975. This enables testing of the existing road alignments against the future road alignments and is based on predicted traffic flows with and without the scheme in the opening year and a future year (+15 years). It also enables testing of a range of mitigation scenarios to ensure that mitigation is effective and proportionate.  Road traffic noise levels are predicted using the method detailed in the Department of Transport technical memorandum - Calculation of Road Traffic Noise (CRTN) 1988 together with minor updates to methodology as outlined in DMRB LA 111 Appendix A. This is the standard method for calculation of road noise in the UK and there has been extensive validation of the method.	N/A
307	South Somerset District Council	12.2.10	Population and Health  Curious as to why only economic policies are referred to when the chapter also references housing development and allocations.	Local housing policy and relevant allocations have been included in the ES (Document Reference 6.2).	N/A
308	South Somerset District Council	16.6.12	Population and Health  It is not clear if this paragraph is referring to settlements within the study area or not. From an SSDC perspective the settlement of Ilton is not within the 500m Study Area shown on Figure 12.1. If it is the intention to list settlements in the general vicinity of the A358 then from an SSDC perspective it should also include, Ilminster, Broadway, Horton, Donyatt, Beercombe and Curry Mallet.	The ES (Document Reference 6.2) includes descriptions of local communities in Chapter 12 Population and human health.	N/A
309	South Somerset District Council	12.6.42	Population and Health  Typo – 'Table' repeated.	Typos have been corrected in the ES (Document Reference 6.2).	N/A
310	South Somerset District Council	Figure 12.3	Population and Health  It is noted that Figure 12.3 identifies recreation facilities outside of the 500M Study Area – is that intentional?	ES Figure 12.3 should show community facilities, including recreation facilities, within the 500m study area only. This figure has been updated in the ES (Document Reference 6.2).	N/A
311	South Somerset District Council	12.9.25	Population and Health  It would be helpful if the three open spaces that have high sensitivity were listed in this paragraph.	The open spaces that have high sensitivity have been listed in the ES (Document Reference 6.2).	N/A
312	South Somerset District Council	12.9.2	Population and Health  Typo – a missing 'as'	Typos have been corrected in the ES (Document Reference 6.2).	N/A
313	South Somerset District Council	12.9.54	Population and Health  Typo- has to cross instead of "have to cross"		N/A
314	South Somerset District Council	12.9.10	Population and Health  Suggest Ashill is also referenced in this paragraph.	Ashill will be referenced in this paragraph in the ES (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
315	South Somerset District Council	12.6.6	Population and Health  There is a Direction of Growth at Ilminster – South Somerset Local Plan Policy PMT3, Ilminster is expected to deliver 496 new homes over the period 2006-2928 – South Somerset Local Plan Policy SS5. Link: <a href="https://www.southsomerset.gov.uk/your-council/your-council-plan-and-strategies/planning-policy/local-plan/">https://www.southsomerset.gov.uk/your-council/your-council-plan-and-strategies/planning-policy/local-plan/</a>	The Direction of Growth Local Plan Policy has been reviewed and considered within ES Chapter 12 Population and human health (Document Reference 6.2).	N/A
316	South Somerset District Council	Table 12-20	Population and Health  Should it be Landplat rather than “Land Plat”?	Typos have been corrected in the ES (Document Reference 6.2).	N/A
317	South Somerset District Council	14.9.2	Climate  When will the quantitative assessment of the before and after mitigation be done?	ES Chapter 14 Climate (Document Reference 6.2) has been undertaken in accordance with DMRB LA114 Climate.	N/A
318	South Somerset District Council	14.9.19	Climate  Suggested that trees, hedges and water management could also be considered receptors.	Table 14-22 of ES Chapter 14 Climate (Document Reference 6.2) includes the construction vulnerability to climate change impacts. This includes the following environmental receptors: watercourses and ecology; and soft landscape and habitats.	N/A
319	South Somerset District Council	14.5.10	Climate  Has the assessment of climate change scenarios considered local probability?  It would be helpful understand why 60 years is the lifetime projection.	ES Chapter 14 Climate has assessed the climate change resilience of the scheme during its design life, in accordance with the methodology presented within DMRB LA 114 Climate. UKCP18 climate change projections for average climate variables for the local area (25-kilometre grid square) have been utilised for the assessment presented within the ES (Document Reference 6.2).	N/A
320	South Somerset District Council	Table 14-21	Climate  Interested to understand what the design or mitigation measure is for the secondary impact of release of pollutants to watercourses.	A description of the embedded mitigation measures included within the scheme is provided within ES Chapter 2 The project. Essential mitigation measures required are described within each of the technical chapters 5-14. Those relevant to climate are presented within ES Chapter 14 Climate, and those relevant to the water environment are presented within ES Chapter 13 Road drainage and the water environment.  An Environmental Management Plan (EMP) is presented within ES Appendix 2.1 (Document Reference 6.4). The EMP outlines measures to be implemented by the contractor to control potential impacts during the construction stage, and this includes a Register of Environmental Actions and Commitments (REAC). The EMP is a live document and will be further refined prior to and during the construction stage.	N/A
321	South Somerset District Council	14.9.14	Climate  The Council is interested to understand when the construction emissions will become available and be added to the GHG emissions.	The updated assessment of greenhouse gas emissions is presented within ES Chapter 14 Climate (Document Reference 6.2).	N/A
322	South Somerset District Council	14.11.14	Climate  Concerned that vulnerability may be significant if mitigation measures in the design are not based on post 2010 precipitation and flooding events.	National Highways have made use of the most recent baseline period (1981 - 2010) available through the Met Office, which is the most robust dataset available for the UK. The Climate Vulnerability Assessment considers potential climate impacts across a range of climate scenarios relative to the baseline period. This does not include detailed consideration of individual flood events between 2010 to present. However, we have considered extreme climate scenarios for the future baseline in order to take a precautionary approach.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
323	South Somerset District Council	12.4.11	Climate Have the most recent EA projections on flooding due to climate change scenarios been included and have they been applied to the DCO boundary only? Have impacts outside of the DCO boundary been considered?	Climate change projections related for river flooding match those discussed and agreed in the meeting with the Environment Agency, Somerset County Council (as were) acting as the Lead Local Flood Authority and the Somerset Drainage Boards Consortium on 21 June 2022 (2080's higher 50% uplift). We have applied these to any receptor that may be affected to changes caused by the scheme.  Climate changes allowances related to peak rainfall, applied to drainage design is a 40% uplift on the 1% annual probability as the design was undertaken in April 2022 which was just in advance of the most up to date guidance (May 2022).	N/A
324	South Somerset District Council	General	Climate We recommend including a reference to confirm that this scheme will be compliant with Highways England's (National Highways) 2025 'Greening Government Commitment' to reduce its own carbon emissions by 75% compared with the 2017/18 baseline.  Where information on energy use, types and quantities of materials used, and waste generated require assumptions based on industry approximations, professional judgement or best practice will be made, these should be consistent with other aspects within the ES, for example the materials assessment.	National Highways has made a Greening Government Commitment to reduce our own carbon emissions by 75% compared with the 2017/18 baseline. The updated climate assessment presented in the Environmental Statement present emissions associated with the A358 scheme, not emissions associated to National Highways and therefore this commitment has not been included within ES Chapter 14 (Document Reference 6.2).  Data included within the assessment is consistent with data presented within other chapters, including ES Chapter 10 Material assets and waste, ES Chapter 5 Air quality and ES Chapter 7 Landscape and visual effects (Document Reference 6.2).	N/A
325	South Somerset District Council	14.4.4	Climate For transport-related emissions (module A4), data on default transport scenarios for UK projects contained within the RICS professional standards and guidance [23] document on whole life carbon assessment for the built environment (2017), were used. For locally manufactured materials and products, a transport distance of 50km by road has been applied. For nationally manufactured materials and products, a transport distance of 300km by road has been applied. It would be helpful to understand why only 30.1 miles and 186 miles for the emission calculations were used and what about ones from beyond these distances.	With regard greenhouse gas emissions, the climate chapter assesses both embodied and tailpipe carbon using the methodologies identified in DMRB LA114 Climate and the best information available to date.	N/A
326	South Somerset District Council	Table 14-14	Climate It is suggested that "could include renewable/and or low carbon energy sources" be replaced with "should include renewable/and or low carbon energy sources".	The ES Chapter 14 Climate (Document Reference 6.2) identifies, assesses and integrates measures to further reduce carbon through on or off-site offsetting and sequestration (e.g. through the use of renewable technologies)	N/A
327	South Somerset District Council	14.1.1	Climate Reference 1, DMRB 114 – Climate (2019) has been withdrawn and replaced with version 0.0.1 (2021). The assessment should align with the latest guidance.	The assessment presented within ES Chapter 14 Climate (Document Reference 6.2) has been undertaken in accordance with DMRB LA114 Climate.	N/A
328	South Somerset District Council	Table 14-15	Climate Construction stage GHG emissions –Will the table be updated once materials and design is finalised? How does this meet the zero carbon by 2050 objectives? Will the contractors vehicles be electric and prioritise using electric	The estimated construction greenhouse gas emissions presented within the PEI Report have been updated and presented in the ES Chapter 14 Climate (Document Reference 6.2). The ES (Document Reference 6.2) also identifies, assesses and integrates measures to further reduce carbon through on or off-site offsetting and sequestration (e.g. through the use of renewable technologies, hybrid/electric plant, generators and electric van fleet, etc.).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			machinery over fossil fuel GHG emitting vehicles to reduce GHG and will construction GHG be monitored?		
329	South Somerset District Council	14.8.9	<p>Climate</p> <p>Operational mitigation needs to be based on the flooding/precipitation events in the area since 2010. Materials need to not only enhance durability in extreme weather events but also mitigate against pollution from run off. Soft landscaping should be designed to slow the flow of floods and reduce contamination e.g. willows and be able to cope with the extreme fluctuations of excessive precipitation and drought. Inspection of drainage to include regular removal of blockages and contamination from road run off should be included.</p>	<p>Updated operational mitigation measures are included in the ES Chapter 14 Climate (Document Reference 6.2). A number of general mitigation and adaptation measures to address the potential impacts associated with climate change events have been considered. Most weather and climate-related resilience effects during operation are expected to be mitigated through measures embedded in the design of the scheme, providing a level of resilience throughout operation.</p> <p>Operational mitigation has been based on the Flood Risk Assessment (FRA) in ES Appendix 13.1 (Document Reference 6.4).</p> <p>A comprehensive list of embedded mitigation and adaptation measures for all climate risks identified within the Climate Change Risk Assessment (CCRA) are set out in ES Chapter 14 Climate (Document Reference 6.2). Additionally, embedded measures are described in ES Chapter 2 The project (Document Reference 6.2).</p> <p>Essential mitigation measures include use of construction materials with appropriate durability requirements (such as increased resilience to thermal loading from fluctuating temperatures); soft landscape features are to be maintained following establishment through watering in periods of dry weather and carrying out periodic inspections to monitor the establishment of new planting; and regular inspection of drainage infrastructure and structures has been specified to assess the condition after extreme weather events.</p> <p>An active system (i.e. valves and penstocks), and passive system (i.e. Sustainable Drainage Systems or SuDS, swales/grassed channels, or silt traps) will reduce the proportion of suspended solids from entering the drainage system via run-off.</p>	N/A
330	South Somerset District Council	Table 14-13	<p>Climate</p> <p>Precipitation change from baseline – has data from the flooding events from 2010 to present been factored in?</p>	<p>National Highways have made use of the most recent baseline period (1981 – 2010) available through the Met Office, which is the most robust dataset available for the UK. The Climate Vulnerability Assessment considers potential climate impacts across a range of climate scenarios relative to the baseline period. This does not include detailed consideration of individual flood events between 2010 to present. However, we have considered extreme climate scenarios for the future baseline in order to take a precautionary approach.</p>	N/A
331	South Somerset District Council	14.8.5	<p>Climate</p> <p>It is suggested that operation mitigation should include monitoring GHG emissions road users during the operational phase of the proposed scheme.</p>	<p>In line with DMRB LA 114, greenhouse gas emissions would be reported to National Highways quarterly during the operation stage. This has been stated within the ES (Document Reference 6.2).</p>	N/A
332	South Somerset District Council	Table 14-19	<p>Climate</p> <p>It would helpful to know the dates of when the example road infrastructure projects occurred, this would enable a valid comparison of the GHG emissions of other similar schemes.</p> <p>Has anywhere quantified the reduction in CO2 emissions due to the removal of existing woodland/trees/hedges?</p>	<p>Known dates of when the example road infrastructure projects occurred have been included within the ES submitted as part of the DCO application (Document Reference 6.2).</p> <p>The ES (Document Reference 6.2) also presents an assessment of land use change (including loss of woodland) and identify, assess and integrate measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., through the use of renewable technologies). Additionally, National Highways set out how they will manage the green</p>	N/A

				space for carbon removal, renewable generation, safety and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030.	
333	South Somerset District Council	14.6.6	Climate The data presented does not include the annual rainfall during the years mass flooding occurred in the local areas of South Somerset and Taunton which is likely to re-occur within the lifetime of the scheme.	National Highways have made use of the most recent baseline period (1981 - 2010) available through the Met Office, which is the most robust dataset available for the UK. Extreme flood events such as those in 2013 and 2014 are considered through the analysis of climate parameters such as projected changes in precipitation, in particular heavy rainfall events.	N/A
334	South Somerset District Council	14.8.2	Climate Please note that SSSDC has declared a climate and ecological emergency aiming for carbon neutrality zero carbon by 2030 and has a Climate Strategy. This is not referred to in this section of the PEIR along with the SCC and SW&T ones <a href="https://www.southsomerset.gov.uk/media/2690/environment-strategy-document-3-final.pdf">https://www.southsomerset.gov.uk/media/2690/environment-strategy-document-3-final.pdf</a>	ES Chapter 14 Climate (Document Reference 6.2) refers to the Somerset's Climate Emergency Strategy.	N/A
335	South Somerset District Council	Table 14-16	Climate Why has maintenance and refurbishment emissions not been separated from lighting energy use?	ES Chapter 14 Climate (Document Reference 6.2) has been undertaken in accordance with DMRB LA114 Climate. The assessment includes a breakdown of maintenance and lighting energy use greenhouse gas emissions.	N/A
336	South Somerset District Council	14.9.18	Climate Does the assessment during operation of climate change impacts include CO2e emissions, particulates and contamination of water?	ES Chapter 14 Climate (Document Reference 6.2) assesses the greenhouse gas emissions, particulates are assessed within ES Chapter 5 Air quality and contamination of water is assessed within ES Chapter 13 Road drainage and the water environment. (Document Reference 6.2).	N/A
337	South Somerset District Council	Table 14-29	Climate Will hoarding –be sustainably sourced (e.g. from reused/recycled materials and not virgin wood) and ideally reusable?	Where practicable, measures would be implemented to manage material resource use during construction including the use of materials with lower embodied greenhouse gas emissions.	N/A
338	South Somerset District Council	14.7.9	Climate Operational impacts from severe weather events does not mention damage to the road surfaces due to extreme heat.	ES Chapter 14 Climate (Document Reference 6.2) sets out the potential impact of heatwaves and higher temperatures which could lead to stress on road surfaces. Suitable road surface materials will be selected that are more resilient to warm temperatures and the pavement will be monitored, maintained and replaced as required. Surface replacement on structures will be replaced every 12-15 years or dependent upon condition.	N/A
339	South Somerset District Council	14.8.7	Climate The Council looks forward to seeing the comprehensive list of embedded mitigation and adaption measures during construction being further developed in the Environmental Statement.	A list of embedded mitigation measures has been included within ES Chapter 2 The project (Document Reference 6.2). Essential mitigation measures are detailed within each of the technical chapters 5-14 (Document Reference 6.2).  An Environmental Management Plan (EMP) has been prepared in accordance with best practice measure and is submitted within the Environmental Statement as ES Appendix 2.1 (Document Reference 6.4). This first iteration EMP for the design stage has been prepared in accordance with the Design Manual for Roads and Bridges (DMRB) guidance LA 120 Environmental Management Plans and will be updated throughout construction and handover in accordance with this guidance.	N/A
340	South Somerset District Council	14.9.12	Climate	Operational greenhouse gas emissions have been assessed within ES Chapter 14 Climate (Document Reference 6.2) in accordance with DMRB LA114 Climate. In line with DMRB LA 114, greenhouse gas emissions would	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Operation and maintenance emissions after 2037 should be aiming for net zero emissions.	be reported to National Highways quarterly during the operation stage. This has been stated within the ES (Document Reference 6.2).	
341	South Somerset District Council	14.11.2	Climate Emissions will however impact the ability for the local authorities who are key statutory stakeholder's in the area, to meet their zero carbon by 2030 targets in their Climate/Ecological Emergency/Environment Strategies.	All projects have a range of benefits and disbenefits on the environment, and it is unusual for a road project to meet all aspirations. Therefore, the measure of environmentally responsibility is always a balanced amalgam of all environmental benefits and disbenefits. With regards to carbon, we have assessed both embodied and tailpipe carbon using the methodologies identified in DMRB LA114 and the best information available to date. Whilst the assessment is made using a well-defined transport model, input from a construction partner has not occurred at this stage. Therefore, the construction assessment is based on a set of professional judgements regarding construction opportunities to reduce carbon. National Highways will update the assessment of both tailpipe emissions and construction carbon, and through the detailed design, seek to reduce embodied carbon through issues such as reused of geotechnical materials arising from the scheme, and reduction of vehicle emissions.	N/A
342	South Somerset District Council	Section 14.5	Climate The chapter does not appear to reference the loss of over 20ha of woodland and its capacity to sequester carbon during the construction phase (until the replacement planting is provided, a period of approximately 5 years); the impact should be considered within the assessment.	ES Chapter 14 Climate (Document Reference 6.2) presents an assessment of land use change (including loss of woodland) and identify, assess, and integrate measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., using renewable technologies). Additionally, National Highways set out how they will manage the green space for carbon removal, renewable generation, safety, and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five-year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030.	N/A
343	South Somerset District Council	14.6.13	Climate Interested to understand why no baseline data was available for wind. Could data be obtained from the MOD or monitoring be undertaken?	The wind baseline data is not readily available from the Met Office. Alternative sources have been considered for the climate assessment presented in ES Chapter 14 (Document Reference 6.2), though it is important to note the time period needs to be consistent with other climate parameters.	N/A
344	South Somerset District Council	14.6.12 and Table 14-12	Climate Extreme precipitation – it would be helpful to understand where the data for the local area comes from as projections seem low compared with what has happened since 2010. Precipitation projections for 2020s to 2079 seem low based on post 2010 flooding events.	National Highways have made use of the most recent baseline period (1981 - 2010) available through the Met Office, which is the most robust dataset available for the UK. Extreme flood events such as those in 2013 and 2014 are considered through the analysis of climate parameters such as projected changes in precipitation, in particular heavy rainfall events.	N/A
345	South Somerset District Council	14.7.7	Climate Concrete and asphalt are referred to here, has the use of kinetic energy generation or solar PV or other renewable energy generating road system solution been considered for this scheme?	ES Chapter 14 Climate (Document Reference 6.2) identifies, assesses, and integrates measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., through the use of renewable technologies)	N/A
346	South Somerset District Council	Table 15-7	Assessment of Cumulative Effects This table reflects that there will be "Permanent adverse significant effects on below ground archaeology (known and unknown) within the footprint of the proposed scheme". Also noted is the permanent adverse effect of the loss of several anciently enclosed fields. These are realistic assessments of impacts.	National Highways acknowledges the support provided by SSDC for the proposed assessment methodology. The results have been reported within the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) together with cumulative effects assessed within ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2).	N/A
347	South Somerset District Council	Table 15-8	Assessment of Cumulative Effects The following updates are provided:	The ES (Document Reference 6.2) has been updated to include the latest situation on planning applications in the study area. An assessment of the	N/A

348	South Somerset District Council	15.3.22	<p>Assessment of Cumulative Effects</p> <p>The Zone of Influence for non-designated heritage resources within the cultural heritage factor needs to be extended in line with the comments against paragraph 6.5.6 of Chapter 6.</p>	The comments against paragraphs 6.6.12 and 6.6.16 to 6.6.19 of Chapter 6 of the PEI Report are acknowledged. The study area used in the ES for non-material assets has been extended to include all non-designated assets within 1km where they lie within the ZVI. A desk study of all of these assets has been completed and is presented in Chapter 6 Cultural heritage of the ES (Document Reference 6.2).	N/A
349	South Somerset District Council	Appendix 3.2	<p>Assessment of Alternatives</p> <p>SSDC notes the consideration of the various alternative options within Tables 3.1 to 3.10 of Appendix 3.2.</p> <p>The Council is aware that a joint group of Parish Councils have proposed a number of options for amendments to the scheme which have been considered by NH and some of those options have already been incorporated into the design of the scheme. With particular reference to locations that fall within the South Somerset area the following is noted:</p> <p>Table 3.5 Broadway Street link option appraisals summary: Broadway Parish Council consider that this link would be improved by providing an off-slip onto Broadway Street.</p> <p>Table 3.9 Table 3.9 Southfields link option appraisal summary (and paragraph 3.6.10 of chapter 3): local parishes believe that the opportunity should be taken to provide a grade-separated junction at Southfields roundabout to permit A358 and A303 traffic (Taunton/M5 – Ilminster Bypass) to allow traffic to be separated from local traffic.</p> <p>SSDC would encourage NH to continue to liaise and work with local communities to find solutions to address the concerns they have raised where it is feasible and viable to do so.</p>	<p>A connection between Broadway Street and the A358 is provided via the proposed Broadway Street link and Ashill junction and this is considered to be an appropriate intervention to ensure connectivity and access to the A358 and other destinations. An additional off-slip directly onto Broadway Street would be in close proximity to the off-slip already proposed at Ashill junction and would be very lightly trafficked, benefiting very few users and would also introduce an additional conflict point onto the A358.</p> <p>National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>National Highways have continued to engage with local communities, including the Community of Parishes throughout the development of the scheme,</p> <p>The updated assessment of alternatives is presented as ES Chapter 3 (Document Reference 6.2).</p>	N/A
350	South Somerset District Council	Table 18-1	<p>Glossary</p> <p>A definition of a 'heritage asset' is provided, whereas the term 'heritage resource' is used throughout the PEIR. Either term is accepted.</p> <p>Descriptions of a 'non-designated heritage asset/resource', the 'local heritage list' and a 'local heritage list candidate' are required.</p>	Descriptions are provided in Chapter 17 Glossary of the ES (Document Reference 6.2).	N/A
351	South Somerset District Council	General Comment	<p>General Comment</p> <p>It is suggested that PEIR may wish to refer to the issue that is impacting on certain types of development across much of Somerset including in South Somerset and Somerset West and Taunton in relation to high levels of phosphates in the Somerset Levels and Moors. You can find</p>	National Highways welcomes comments made in relation to phosphates and for providing further information on the webpage. Our biodiversity team are aware of the issues related to phosphates in the Somerset Levels and Moors SPA.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			out more information here: <a href="https://www.southsomerset.gov.uk/services/planning/somerset-levels-and-phosphates/">https://www.southsomerset.gov.uk/services/planning/somerset-levels-and-phosphates/</a> .	National Highways are aware of the Biodiversity Emergency issued by Somerset Councils (as were) following advice issued by Natural England that the Somerset Levels and Moors SPA and Ramsar site is in unfavourable conditions primarily due to phosphate levels in surface water. In response, Somerset Council are considering phosphate emissions from developments given within planning applications, primarily developments such as residential, agricultural, and commercial developments. Road developments are not considered significant sources of phosphates. However, we have considered the potential impacts of phosphates from the scheme on designated sites and have reported the results (no significant effects) of this assessment in the Habitats Regulations Assessment: Screening and Statement to Inform Appropriate Assessment (Document Reference 6.5).	
352	Somerset County Council		<p>Executive Summary</p> <p>Parish Councils have also raised concerns about potential impacts associated with the displacement of traffic within the local highway network. Important to understanding this is the modelling of traffic movements. The County Council's response provides commentary on the modelling methodology and outputs provided to date and confirms that local impacts must be robustly assessed, taking into account the proposed stopping up of roads and resultant redistribution of traffic on the local network. Upon completion of a robust assessment, required solutions can be developed on the basis of evidence. The County Council makes the following requests:</p> <ul style="list-style-type: none"> <li>• Figure 9-1 should be revised to show all increases and decreases in traffic flow on the local network, perhaps by splitting into up to 250 vehicles above and below zero, instead of masking most of these in a wide band around zero, and an additional figure to show percentage increases included.</li> <li>• SCC should be consulted about the assessment process that National Highways propose to employ to determine whether the local roads are of a suitable standard to accommodate additional traffic.</li> <li>• Other criteria beyond congestion should be included when considering how the impact of increased traffic on communities and other road users should be measured and adverse impacts mitigated. Such criteria would need to consider the overall level and impact to specific localities and how these outputs are used to define triggers for solutions/ mitigation. SCC should be consulted about these criteria.</li> </ul>	<p>National Highways have been actively engaging with Somerset Council on the traffic impacts on the local road network throughout the preliminary design stage. As part of this engagement, detailed traffic data has been shared that sits behind the figures presented in the A358 Technical Traffic Note at statutory consultation. Since receiving this comment, a set of interactive traffic webmaps has been developed that provide more detailed traffic information about how the scheme will affect the surrounding local road network.</p> <p>National Highways has also been engaging closely with Somerset Council as the local highway authority for advice and comment on the local road network. During this stage of scheme development, National Highways and Somerset Council have jointly developed a Local Roads Strategy (LRS) and Local Roads Assessment (LRA) for the scheme. The LRS assesses suitable design methodologies and standards for those parts of the local roads network affected by the scheme while the LRA identifies risk and proposed mitigation. Further details on the process of developing mitigation measures on the local road network are included within the ComMA Report (Document Reference 7.4).</p>	Yes
353	Somerset County Council		<p>Executive Summary</p> <p>It is not clear at this stage what the strategy is for the existing dual carriageway section from Mattocks Tree Green to Henlade. Retention of this dual carriageway section for local traffic could involve unnecessary future maintenance and may attract antisocial behaviour. A single lane two-way road should be provided for vehicular traffic with access retained to properties, whilst separate non-motorised user provision is made in accordance with the proposals contained in the consultation drawings.</p>	<p>The scheme would retain this section of the existing A358 to maintain connections to local villages such as Henlade and Thornfalcon, and can be accessed via the existing M5 junction 25 and Nexus 25 junction, as well as the proposed Mattock's Tree Green junction.</p> <p>National Highways have discussed details in the Technical Working Groups to reach an agreed position with Somerset Council (formerly Somerset County Council) about how the existing A358 would be retained as a local road including consideration of the reallocation of the current eastbound carriageway to cycle travel. This matter is discussed in the Statement of Common Ground with Somerset Council (Appendix A of the Statement of Commonality, Document Reference 7.3).</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
354	Somerset County Council		<p>Executive Summary</p> <p>There are multiple locations where the design proposals will sever sections of the existing local road network and subsequently create cul-de-sacs. In such locations the local highway authority will look to maintain the part of that network that is necessary for access and provides public utility. Where the remaining local road network will serve either individual properties or businesses the local highway authority will look to explore the transfer of ownership responsibilities. Where possible the length of the cul-de-sac should be minimised. Consideration should be given to the relocation of any existing field accesses and private accesses accordingly with the remaining sections potentially returning to alternative uses.</p>	National Highways have agreed with Somerset Council the treatment of stopped-up local roads on a case-by-case basis, with special consideration of any existing or proposed diversions that have been requested to remain within public highway by utility providers.	N/A
355	Somerset County Council		<p>Executive Summary</p> <p>It is understood that National Highways will be applying DMRB (Design Manual for Roads and Bridges) GD300 as the design standard for the main line – this has been referenced in correspondence with affected Parish Councils and related briefings. However, the consultation material does not specify the design standards that have been applied to the proposals to date, therefore the County Council would welcome formal confirmation of the design standards to be applied going forward. SCC also seek clarity on design standards to be applied to the local road network where it interfaces with the proposed scheme.</p>	<p>National Highways are using DMRB standards for the design of the scheme and assets intended to be owned and maintained by National Highways. GD 300 is one of numerous standards in DMRB that have been, and will be, used.</p> <p>Standards for local roads have been listed in the Local Roads Strategy prepared by National Highways and have been agreed with Somerset Council.</p>	N/A
356	Somerset County Council		<p>Executive Summary</p> <p>The County Council has concerns regarding the current proposed configuration of the Mattock's Tree Green junction, in particular the proximity of the new simple priority junction (serving Hatch Beauchamp) to the northern roundabout and the subsequent right turn manoeuvres that would need to take place immediately after exiting the roundabout. It is considered that an alternative arrangement could be provided that improves the connectivity for all non-motorised users through the A358/A378 junction and facilitates the retention of the existing carriageway.</p>	Following statutory consultation in 2021, National Highways reviewed the configuration of the Mattock's tree Green junction and proposed an alternative arrangement for supplementary consultation 2022 in which the Village Road link (north) was connected directly into the northern roundabout at Mattock's Tree Green junction. This arrangement eliminates the separate junction with A378 and creates a more direct link to Hatch Beauchamp. This arrangement would improve safety by eliminating several conflicting traffic movements and simplify signposting. A signalized Pegasus type crossing would be provided to provide safer crossing opportunities to walkers, cyclists and horse-riders across the A378.	Yes
357	Somerset County Council		<p>Executive Summary</p> <p>Consideration should be given to diversionary routes in the event of the new A358 dual carriageway being closed in order to ensure route resilience and that potential impacts on the local highway network may be understood and addressed.</p>	The increased capacity provided by the scheme would mean that the A358 could operate with one lane closed in the event of an accident or breakdown, thus reducing the need for local diversions or closures, as would be the case with the existing single carriageway route. Any significant and planned road closures requiring strategic diversions would be planned in advance and agreed with Somerset Council as the local highway authority and would utilise other A roads on both the strategic and local road network.	N/A
358	Somerset County Council		<p>Executive Summary</p> <p>Application of the GD300 design standard has implications for the frequency and design of local connections that should be provided to the mainline carriageway. A number of local Parish Councils do not agree with use of the GD300 design standard – they seek more local connections to the dual carriageway. The County Council does not challenge the use of the design standard.</p>	<p>National Highways welcome confirmation that Somerset County Council do not challenge the use of the GD 300 design standard adopted in the development of the design.</p> <p>This matter is agreed in the Statement of Common Ground with Somerset Council (See Statement of Commonality Document Reference 7.3).</p>	N/A
359	Somerset County Council		<p>Executive Summary</p> <p>The connection between Ilminster and Horton Cross is shown as a Traffic Free Cycle Route. It is assumed that this does not exclude</p>	The path that links the A358 (west) and A303 would be widened and signed for use by walkers and cyclists.	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			pedestrians, but confirmation of provision for equestrians is sought. There are riding networks either side of Southfields Roundabout and every effort should be made through this project to reduce the severance caused by the current and proposed infrastructure and improve the situation for all users.		
360	Somerset County Council		Executive Summary Clarification is required regarding ownership, and subsequent maintenance responsibilities, of new assets installed as part of this scheme, and the extents of existing local highway to form part of the Strategic Road Network.	National Highways are continuing to develop the scheme and will continue ongoing engagement with Somerset Council regarding ownership and maintenance limits of the highway network and associated assets.	N/A
361	Somerset County Council		Technical Design Review - Summary The information provided in the Statutory Consultation does not significantly differ from the drawings at "Design Fix 2" which were the subject of response by the County Council in July 2021. The comments set out in that response are equally applicable and therefore form part of the County Council's response to this statutory consultation – set out in Appendix 1 (report reference Sa-6-0081-002-3 rev B dated 23rd July 2021). The July response provides comments on the various project features which form part of the consultation questions.	National Highways design team responded to the Council comments (included in report reference Sa-6-0081-002-3) via the Local Roads Strategy submitted on 13 October 2021.	N/A
362	Somerset County Council		Technical Design Review - Summary Additional observations of the County Council as Local Highway Authority are outlined below, together with any key points of emphasis from the July response to Design Fix 2.	National Highways acknowledges the observations made and responses are provided to each comment raised below.	N/A
363	Somerset County Council		Technical Design Review - Confirmation of the Design Standards applied to the Mainline (A358) It is understood that National Highways will be applying DMRB (Design Manual for Roads and Bridges) GD300 as the design standard for the main line – this has been referenced in correspondence with affected Parish Councils and in related briefings. However, the consultation material does not specify the design standards that have been applied to the proposals to date, therefore the County Council would welcome formal confirmation of the design standards to be applied going forward.	National Highways are using DMRB standards for the design of the A358 and assets intended to be owned and maintained by National Highways. GD 300 is one of numerous standards in DMRB that have been, and will be, used. Standards for local roads have been listed in the Local Roads Strategy prepared by National Highways and have been agreed with Somerset Council.	N/A
364	Somerset County Council		Technical Design Review - Confirmation of the Design Standards applied to the Mainline (A358) SCC also seek clarity on design standards to be applied to the local road network where it interfaces with the proposed scheme.	Standards for local roads have been listed in the Local Roads Strategy prepared by National Highways and have been agreed with Somerset Council.	N/A
365	Somerset County Council		Technical Design Review - Mitigation Works to the Existing A358 Dual Carriageway through Henlade A primary benefit of the scheme is the significant reduction of traffic that will use the existing A358 through Henlade, although the extent of the reduction will need to be established as part of the traffic modelling workstream. It is not clear at this stage what the strategy is for the existing dual carriageway section from Mattocks Tree Green to Henlade. Retention of this dual carriageway section for local traffic could involve unnecessary future maintenance and may attract antisocial behaviour. A single lane two- way road should be provided for vehicular traffic with access retained to properties, whilst separate non-motorised	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place. As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists	Yes

			user provision is made in accordance with the proposals contained in the consultation drawings.		
366	Somerset County Council		<p>Technical Design Review - Mitigation Works to the Existing A358 Dual Carriageway through Henlade</p> <p>Somerset County Council is generally supportive of the WCHR (Walkers, Cyclists and Horse Rider) proposals and offers a number of detailed comments at Section 4 of this response to help progress discussions and inform the detailed designs. The creation of a route for cyclists between Taunton and across Southfields Roundabout to Ilminster is welcomed but there is a need to ensure that this route and the routes that cross the new road take into account LTN 01/20 having regard to the increases in traffic volumes on key sections that may result and traffic speeds, together with the need to ensure the new grade separated junctions cater for all users.</p>	<p>National Highways plans to make use of the local road network and new off-road routes to create a cycle route that would run from Henlade to Southfields roundabout.</p> <p>The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.</p> <p>As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.</p> <p>The scheme would serve cyclists in the local communities, giving people the opportunity to get out of their cars and onto bicycles for local journeys. In developing the interurban proposals for the A358, National Highways recognises the advice of LTN 1/20 but been unable to meet all its recommendations.</p> <p>Taking into account scheme changes as an outcome of consultation, there are eight roads crossing the scheme that could use used by cyclists, namely:</p> <ul style="list-style-type: none"> <li>• Stoke Road overbridge</li> <li>• Mattock's Tree Green junction overbridge</li> <li>• Griffin Lane underbridge</li> <li>• Bickenhall Lane overbridge</li> <li>• Village Road overbridge</li> <li>• Sunnyside underpass</li> <li>• Ashill junction overbridge</li> <li>• Jordans overbridge</li> </ul> <p>Stoke Road and Village Road realignments would retain the existing cross-section that they tie into, i.e. a highway with a grass verge on both sides. Griffin Lane alignment would not be affected by the scheme. Bickenhall Lane, Sunnyside Underpass and Jordans overbridge would be largely traffic-free apart from landowners' accommodation access.</p> <p>Mattock's Tree Green junction overbridge would include traffic-free tracks on both sides that would be segregated from road traffic and useable by walkers, cyclists and horse-riders. Ashill junction overbridge would have footways on both sides and on the Ashill Road/Rapps Road approaches.</p> <p>Additional crossings would be available at:</p> <ul style="list-style-type: none"> <li>• Fivehead River underbridge but the status of connecting rights of way is outside the scope of the scheme</li> </ul>	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				• High Bridge underbridge (unsurfaced bridleway so attractive to off-road bikes only).	
367	Somerset County Council		Technical Design Review - Mattocks Tree Green Junction Configuration  The County Council has concerns regarding the current proposed configuration of the Mattock's Tree Green junction, in particular the proximity of the new simple priority junction (serving Hatch Beauchamp) to the northern roundabout and the subsequent right turn manoeuvres that would need to take place immediately after exiting the roundabout. It is considered that an alternative arrangement could be provided that improves the connectivity for all non-motorised users through the A358/A378 junction and facilitates the retention of the existing carriageway.	The scheme now proposes a revised arrangement at the junction's northern roundabout eliminating the right-turn that would need to take place immediately after exiting the roundabout, as well as improving safety and connectivity for all road users.	Yes
368	Somerset County Council		Technical Design Review - Mattocks Tree Green Junction Configuration  There are other options that could be explored. The County Council will work with National Highways on the development of a suitable design solution, which also encourages the use of the new dual carriageway where appropriate.	The scheme now proposes a revised arrangement at the junction's northern roundabout.	Yes
369	Somerset County Council		Technical Design Review - Capland Lane / Village Road Link still not provided  It is noted that the provision of a new single carriageway link between Capland Lane and Village Road, or the improvement of local roads to improve flood resilience, are options under consideration as set out in Question 3c of the Statutory Consultation. SCC will wish to engage through the technical workstreams to review the flooding issues and what measures might need to be taken. Confirmation from a modelling perspective is also required to support the option taken forward to detailed design so that the implications on the local road network can be fully assessed.	Based on consultation feedback, National Highways are taking forward Option 1, which would provide a connecting link road between Capland Lane and Village Road. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.  The traffic model indicates that Capland link would not be used by any through traffic. The link would facilitate access to properties along Capland Lane from Village Road at the western end or from Stewley Lane / Stocks Lane at the eastern end.  Due to the location of the Capland link not being within a floodplain, no fluvial modelling has been undertaken.	N/A
370	Somerset County Council		Technical Design Review - Additional Points  It is noted that the study area includes Bickenhall Lane Waste Transfer Station (WTS) which is operational. It is not discussed in Chapter 10 of the PEIR but the location is identified in Figure 10.1. Being an allocated WTS, engagement with the County Council will be required in terms of impact and potential relocation/ reprovision of this operational facility.	National Highways are continuing to engage with Somerset Council about an agreed way forward regarding the removal of the existing WTS facility and this will be updated in the Environment Statement (Document Reference 6.2).	N/A
371	Somerset County Council		Technical Design Review - Additional Points  Clarification is required regarding ownership, and subsequent maintenance responsibilities, of new assets installed as part of this scheme, and the extents of existing local highway to form part of the Strategic Road Network.	National Highways are continuing to develop the scheme and will continue ongoing engagement with Somerset Council regarding ownership and maintenance limits of the highway network and associated assets.	N/A
372	Somerset County Council		Technical Design Review - Additional Points  There are multiple locations where the design proposals will sever sections of the existing local road network and subsequently create cul-de-sacs. In such locations the local highway authority will look to maintain the part of that network that is necessary for access and provides public utility. Where the remaining local road network will serve either individual properties or businesses the local highway authority will look to explore the transfer of ownership responsibilities. Where	National Highways have agreed with Somerset Council the treatment of stopped-up local roads on a case-by-case basis, with special consideration of any existing or proposed diversions that have been requested to remain within public highway by utility providers.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			possible the length of the cul-de-sac should be minimised. Consideration should be given to the relocation of any existing field accesses and private accesses accordingly with the remaining sections potentially returning to alternative uses.		
373	Somerset County Council		Technical Design Review - Additional Points  Consideration should be given to diversionary routes in the event of the new A358 dual carriageway being closed in order to ensure route resilience and that potential impacts on the local highway network may be understood and addressed.	The increased capacity provided by the scheme would mean that the A358 could operate with one lane closed in the event of an accident or breakdown, thus reducing the need for local diversions or closures, as would be the case with the existing single carriageway route. Any significant and planned road closures requiring strategic diversions would be planned in advance and agreed with Somerset Council as the local highway authority and would utilise other A roads on both the strategic and local road network.	N/A
374	Somerset County Council		Technical Design Review - Additional Points  Traffic currently exiting the M5 motorway at J25 southbound is directed to use the existing A358 through Henlade. The County Council will wish to ensure that appropriate measures are taken to redirect traffic to the new A358 dual carriageway and reduce the risk of traffic through Henlade.	National Highways would propose an upgrade to signage and road markings in order to make it easier and clearer to get on to the A358 from M5 junction 25, a key link to the wider road network in the region.	N/A
375	Somerset County Council		Technical Design Review - Additional Points  It is noted at paragraph 2.5.70 of the PEIR that the mainline is not proposed to be lit, apart from the immediate approaches to the Nexus and Southfields roundabouts. The County Council has recently developed a new Technical Advice Note 22/20 which provides guidance for the design, installation and handover of street lighting and illuminated traffic signs and should be considered by National Highways in developing the next stage of the design process.	National Highways requests provision of the new Technical Advice Note 22/20 so we can consider further the guidance and see what can be implemented in the detailed design stage, subject to successful DCO consent.	N/A
376	Somerset County Council		Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.1 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000001 P04  The notation of 'Proposed off-line cycle route' does not describe who would be able to use this route, in particular whether it is on-road or off-road (vehicular or non-vehicular). Reference to other drawings suggests that on-road provision is envisaged and will therefore be available to all Non-Motorised Users (NMUs), not just cycles.	The offline cycle route comprises on-carriageway and off-carriageway sections. It is primarily for cyclists, but some sections would be shared with walkers and horse-riders. This is detailed in the Rights of Way and Access Plans (Document Reference 2.4).	N/A
377	Somerset County Council		Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.2 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P04  As noted at paragraphs 3.3. and 3.4 above, it is not clear at this stage what the strategy is for the existing dual carriageway section from Mattocks Tree Green to Henlade, but separate provision should be made for NMUs in accordance with the proposals contained in the WCHR consultation drawings. In relation to the current proposed configuration that involves a new slip to the roundabout, separate non-motorised user provision would need to be made between Glebe Cottages road and Mattocks Tree Green to avoid the need for NMUs to join and exit the new slip.	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.  A separate track would run from Glebe Lane and along most of Village Road link (north) for use by walkers, cyclists and horse-riders. This is detailed in the Rights of Way and Access Plans (Document Reference 2.4).	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
378	Somerset County Council		<p>Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.2 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P05</p> <p>Crossing facilities suitable for all NMUs (not just pedestrians) would need to be made at the existing A358/A378 intersection to enable flow to/ from Village Road. There is a lack of clarity without reference to other drawings as to what sections of the off-line cycle route are vehicular or non-vehicular.</p>	<p>Access is detailed in the Rights of Way and Access Plans (Document Reference 2.4). In summary and in response to the specific comments made, a signal-controlled crossing for use by walkers, cyclists and horse-riders would be provided at the A378 Langport Road. The track on either side of the crossing would be a segregated facility using the existing A358 carriageway that would be redundant because of the scheme.</p> <p>The offline cycle route comprises on-carriageway and off-carriageway sections. On-carriageway sections would be shared with vehicles and off-carriageway sections would be traffic-free. The walking, cycling and horse-riding strategy drawings indicate the traffic-free sections as either bridleways or restricted byways. In summary:</p> <ul style="list-style-type: none"> <li>• M5 junction 25 to Bushy Cross off-carriageway (extant shared footway/cycleway)</li> <li>• Bushy Cross to Glebe Lane on-carriageway (on the existing A358 dual carriageway section south of Henlade, the existing eastbound carriageway is proposed to be repurposed as a cycleway)</li> <li>• Glebe Lane to Village Road link (north) off-carriageway</li> <li>• Village Road-Ashill link-Ashill Road-Broadway Street link on-carriageway</li> <li>• Broadway Street link to Horton Cross off-carriageway.</li> </ul>	N/A
379	Somerset County Council		<p>Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.2 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P06</p> <p>The proposed bridleway across the dumbbell arrangement at Mattock's Tree Green junction is welcomed but this should be a dedicated NMU route with safe arm crossings for both directions of travel to avoid the need for NMUs to be on the carriageway at the roundabouts. Suitable height parapets will need to be provided to ensure they are appropriate for equestrians.</p>	<p>Mattock's Tree Green junction overbridge would include traffic-free tracks on both sides that would be segregated from road traffic and useable by walkers, cyclists, and horse-riders. Parapets on the overbridge would be suitable for horse-riders at 1.8m height with 1.0m solid infill. All arms of the dumbbell roundabouts would have formal uncontrolled crossings.</p>	N/A
380	Somerset County Council		<p>Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.2 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P07</p> <p>It is not clear what is proposed in relation to footpath number T 2/4 given that the footpath will be intersected by the proposed Bickenhall overbridge.</p>	<p>Bickenhall Lane alignment has changed as an outcome of consultation and footpath T 2/4 would not be affected by the scheme. A new footpath, shared with landowner and maintenance access, would connect T 2/4 with the lane. This is detailed in the Rights of Way and Access Plans (Document Reference 2.4).</p>	Yes
381	Somerset County Council		<p>Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.3 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P04</p> <p>There are sections of T 14/8 which will need stopping up/diverting but are not shown as such on the drawing.</p>	<p>This is detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by details of stopping up/diverting in the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4).</p>	N/A
382	Somerset County Council		<p>Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.3 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P05</p> <p>The permissive path to the Fivehead River underbridge showing as being stopped up has no formal permission in place, meaning there is nothing to formally stop up. The strategy for WCHR in this location requires more discussion to ensure a connected network. The Neroche Herepath in this location has no formal status hence any proposed route</p>	<p>The permissive path on the north side of Fivehead River underbridge is not shown on updated drawings including the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4). The strategy for walking, cycling and horse-riding has been reviewed and the revised scheme retains an ability for walkers to use the underbridge. Extant permissive connections would be unaffected by and are beyond the scope of the scheme.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			using the underbridge will ideally need to connect to Bickenhall Lane, or other possible solutions explored. The proposal is not accepted in its current form.		
383	Somerset County Council		<p>Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.3 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P06</p> <p>Every effort should be made to ensure that all improved or new underpasses allow for as many types of NMUs as possible adopting the inclusive approach. Signs, mounting blocks and TROs can deal with any restricted headroom issues and form a departure from standard as necessary.</p>	<p>The scheme includes three underbridges that would or could accommodate walkers, cyclists and horse-riders:</p> <ul style="list-style-type: none"> <li>• At Fivehead River underbridge, the headroom under the existing structure is approximately 2.3m and this would be maintained through the new section. The status of connecting rights of way is outside the scope of the scheme.</li> <li>• High Bridge underbridge would have a headroom of 2.3m, which is suitable for walkers only. National Highways anticipates that a departure from standard would allow a bridleway with restricted headroom to be provided including mounting blocks. The bridleway would run through the underbridge along the northern side of the river and connect to Capland Lane.</li> <li>• At Sunnyside underpass, the headroom under the existing structure is approximately 3.1m and this would be maintained through the new section. The underpass would be shared with the landowner and classified as a restricted byway. Mounting blocks including associated signage would be provided to enable horse-riders to dismount and lead the horse through the structure.</li> </ul>	N/A
384	Somerset County Council		<p>Walking, Cycling and Horse-riding Review - WCHR Drawings - 4.4 DRAWING NUMBER: HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P04</p> <p>The connection between Ilminster and Horton Cross is shown as a Traffic Free Cycle Route. It is assumed that this does not exclude pedestrians, but confirmation of provision for equestrians is sought. There are riding networks either side of Southfields Roundabout and every effort should be made through this project to reduce the severance caused by the current and proposed infrastructure and improve the situation for all users. The NPS has the following sections in support of such an approach:</p> <ul style="list-style-type: none"> <li>• 3.21 – Applicants are reminded of their duty to promote equality and to consider the needs of disabled people as part of their normal practice. Applicants are expected to comply with any obligations under the Equalities Act 2010. (There are equestrians that can ride or drive long distances but would be unable to do so on foot or pedal cycle and could therefore be considered disabled.)</li> <li>• 5.180 – Where green infrastructure is affected, applicants should aim to ensure the functionality and connectivity of the green infrastructure network is maintained and any necessary works are undertaken, where possible, to mitigate any adverse impact and, where appropriate, to improve that network and other areas of open space, including appropriate access to new coastal access routes, National Trails and other public rights of way.</li> <li>• 5.184 – Public rights of way, National Trails, and other rights of access to land (e.g. open access land) are important recreational facilities for walkers, cyclists and equestrians. Applicants are expected to take appropriate mitigation measures to address adverse effects on coastal access, National Trails, other public rights of way and open access land</li> </ul>	<p>The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. Details of the proposals are set out in in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4). The existing shared use path at Southfields roundabout between the A358 (west) and A303 (south) arms would be widened and a signal-controlled crossing provided on the A358 (west) near to the services' access.</p> <p>National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>All comments on walking, cycling and horse-riding proposals have been carefully considered and the proposals are detailed in in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4). An assessment of walking, cycling and horse-</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			and, where appropriate, to consider what opportunities there may be to improve access. In considering revisions to an existing right of way consideration needs to be given to the use, character, attractiveness and convenience of the right of way. The Secretary of State should consider whether the mitigation measures put forward by an applicant are acceptable and whether requirements in respect of these measures might be attached to any grant of development consent.	riding is provided in ES Chapter 12 Population and human health (Document Reference 6.2).	
385	Somerset County Council		Walking, Cycling and Horse-riding Review - Summary and Recommendations  There are few material changes between the draft WCHR drawings (previously seen at "Design Fix 2"), and the public consultation drawings WCHR now issued. The comments on the WCHR proposals set out in the response at that time are therefore equally applicable and form part of the County Council's response to this statutory consultation  – set out in Appendix 1 (report reference Sa-6-0081-002-3 rev B dated 23rd July 2021).		N/A
386	Somerset County Council		Traffic Technical Note Review - Introduction  This note considers the Technical Note HE551508-ARP-GEN-ZZ-RP-TR-000006 which has been shared with Somerset County Council by National Highways. The Technical Note sets out a summary of the transport modelling approach for the A358 Taunton to Southfields scheme (hereafter referred to as 'the Scheme') and provides commentary on a small set of selected results.	National Highways acknowledges these comments.	N/A
387	Somerset County Council		Traffic Technical Note Review - Introduction  This note considers the document with specific focus on how the local roads have been represented, and the impacts of the scheme as far as it is possible to determine these from the information provided.		N/A
388	Somerset County Council		Traffic Technical Note Review - Introduction  In preparing this response section sub-headings have been incorporated to match those of the reporting being commented upon with [square brackets] indicating specific paragraphs. A series of numbered notes has been added which are emboldened text if there are any concerns that the approach is likely to under or misrepresent impacts on the local network or italicised for queries where clarification is sought.		N/A
389	Somerset County Council		Traffic Technical Note Review - Explanation of Traffic Modelling  No comments.	National Highways acknowledges this comment.	N/A
390	Somerset County Council		Traffic Technical Note Review - Process of Developing a Traffic Model  The description sets out the overall process with some local factors such as specific developments identified. This description is consistent with National Highways modelling requirements.	National Highways acknowledges this comment.	N/A
391	Somerset County Council		Traffic Technical Note Review - Model Compared to Reality  This section provides some information about the model validation, comparing modelled flows to observed count data and modelled journey	The Technical Traffic Note was intended as a high-level overview of traffic modelling methodology and outputs to make this accessible to members of the public and stakeholders at statutory consultation. National Highways have continued to actively engage with Somerset Council to close out these follow up queries on traffic data and performance of the traffic model on the	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>times to observed journey times. The source of the observed data is not explicitly recorded in the Technical Note.</p> <p>1. The source of the observed data should be included in the Technical Note to identify the originator and age of the data.</p> <p>2. More details should be provided about the types of counts (long term or short term), and comment provided on the quality of the data.</p> <p>3. More points should be provided for comparison in the local network to allow a fuller understanding of model performance.</p>	<p>local road network throughout the preliminary design stage. More detail about the underlying source data is included in the ComMA Report (Document Reference 7.4).</p>	
392	Somerset County Council		<p>Traffic Technical Note Review - Model Compared to Reality</p> <p>The discussion of journey times indicates that 89 routes have been assessed during the model development but only presents two of these routes in all three modelled periods</p> <p>– albeit the most important routes.</p>	<p>A Technical Traffic Note was published to help people understand the likely traffic impacts of the proposed scheme so that they could make an informed response to the statutory consultation. The note was sufficiently detailed for the purposes of consultation and included information about traffic modelling, traffic flow and journey time, value for money assessment and impacts of Covid-19 on traffic. To support the supplementary consultation, an updated Technical Traffic Note was published, which included additional information on likely junction performance, accidents and mitigation on the local road network and proposed design changes. Furthermore, a 2D interactive mapping tool was provided to demonstrate traffic flow information, routeing and journey times.</p> <p>The methodology and results of the traffic modelling is reported in more detail in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	N/A
393	Somerset County Council		<p>Traffic Technical Note Review - Representation of Local Roads in the Model</p> <p>The Technical Note says that a detailed review of the local road network was undertaken to determine which parts were likely to see changes in traffic flows as a result of the scheme [5.1.3]. Unfortunately, the Technical Note does not reveal what analysis underpinned the detailed review, so it is not possible to determine if an appropriate range of factors was used nor whether appropriate weight was given to those factors. Added to this, there was no engagement with either the local highway authority or local communities to assist with determining which routes should be included in the model. Figure 4-2 is useful but would be more helpful if the flows were presented by direction which is especially important on the local roads.</p> <p>5. Details should be provided of the process for selecting additional network with SCC.</p> <p>6. Figure 4-2 should be expanded to show flow by direction.</p>	<p>Throughout the scheme development process, National Highways have been actively engaging with Somerset Council and parish councillors to identify where key impacts on the local road network are expected. We have engaged with Somerset Council and explained the methodology used to determine the need for inclusion of local road network within the traffic model. National Highways shared the following response to this query with Somerset County Council (as were) in October 2021:</p> <p>'The approach adopted was to review the local road network around the A358 corridor and to categorise roads into those that facilitate only local access (an example is Park Barn Lane) and those that act as collector and distributor roads to provide connections between local communities and the strategic road network (an example is Village Road). All roads classed as local collector and distributor roads were included in the traffic model. The effect that the closure of various existing accesses onto the A358 would have on changes in routeing was also considered separately. Local roads that may see an increase in traffic due to nearby roads being stopped up as part of the scheme proposal were therefore also included in the traffic model (an example is Meare Green Lane). A conservative approach was adopted meaning that roads that may ultimately experience no impact as a result of the A358 dualling scheme were included to give the traffic model the opportunity to re-route traffic onto them rather than ruling out any possibility of reassignment at the scoping stage (an example is Folly Drove).'</p>	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				National Highways have separately liaised with Somerset Council to provide the more detailed traffic flow information requested with regards to Figure 4-2 of the Technical Traffic Note.	
394	Somerset County Council		Traffic Technical Note Review - Forecast Traffic Flows and Journey Times  The information presented in Figure 6-1 is partially helpful but is lacking many of the locations which were reported in Figure 4-2 – predominantly those on the local network. Figure 6-1 also show the flows as “daily traffic” whereas Figure 4-2 presented flows from the modelled hours. Therefore, a direct and informative comparison is not possible from this data. 7. Figure 6-1 should be expanded to show direction of flow by modelled period.	National Highways are actively engaging with Somerset Council and have now provided the additional traffic data that underpins Figure 6-1 of the Technical traffic note.	N/A
395	Somerset County Council		Traffic Technical Note Review - Value for Money Assessment  The information here is limited but there is an implied BCR of 1.21 in [7.1.3]. However, as an estimate of benefits has been provided this implies that the impacts on road safety and the environment have been monetised. Of particular interest, from a traffic flow perspective would be the COBALT outputs which show where there are changes to flows which might result in additional collisions and casualties.  8. The status of any COBALT analysis and outputs should be shared with Somerset County Council	National Highways are actively engaging with Somerset Council and have provided an update on the status of the value for money assessment in the current stage of work. A value for money assessment has been undertaken and this is reported in the ComMA Report (Document Reference 7.4). Results from the COBALT accident assessment will be shared with Somerset Council.	N/A
396	Somerset County Council		Traffic Technical Note Review - Impact of COVID-19 on Traffic Patterns and Volumes  No comments on this section.	National Highways acknowledges this comment.	N/A
397	Somerset County Council		Traffic Technical Note Review - Impact on Traffic Flows on the Local Road Network  Figure 9-1 is not as helpful as it should be due to the selection of the range +/-250 vehicles which makes it impossible to determine whether there is an increase or decrease on many of the routes presented. The band itself is 500 vehicles wide – and the next neighbouring bands are 250 vehicles wide (+250 to +500 vehicles or -250 to -500 vehicles). This masks changes which might be up to 50% increases in some locations given the flows presented in Figure 4-2. For example, the road east of Broadway is shown with 24; 33; 25 vehicles in the AM; IP and PM respectively which can be converted by multiplying by 3; 6; 3 for the number of hours in the period and increased by 10% to estimate an average annual daily flow of 380 vehicles. This route is shown in blue so might experience an additional 249 vehicles which would be an increase of 65%. This might not be the case, but the presentation does not allow for an appropriate assessment.  9. Figure 9-1 should be revised to show all increases and decreases, perhaps by splitting into up to 250 vehicles above and below zero, instead of masking most of these in a wide band around zero, and an additional figure to show percentage increases included.	National Highways are actively engaging with Somerset Council and have now provided the additional traffic data that underpins Figure 9-1 for further inspection. A set of interactive webmaps was created as part of supplementary consultation to make the information about traffic impacts of the scheme more accessible to all consultees. We have also added figures that are the same as the one commented on here to our ComMA Report (Document Reference 7.4) that show impacts on the local road network in the way suggested by Somerset Council, both showing actual flow changes as well as percentage flow changes separately. These figures in the ComMA reflect the latest modelling in which the opening year has been changed to 2031 and other aspects such as growth forecast assumptions have been updated. In the figures that show the actual flow change the neutral band has been retained as being between -249 and +249 vehicles per day. This is classed as neutral because changes in traffic flow that are of this order of magnitude would be imperceptible among day-to-day variation in traffic flows as it equates to a maximum change in traffic of less than one vehicle every two minutes.	Yes
398	Somerset County Council		Traffic Technical Note Review - Impact on Traffic Flows on the Local Road Network	National Highways has actively engaged with Somerset Council on the traffic impacts on the local road network and proposed mitigation measures where considered appropriate based on the change in traffic flows. This	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>Where increases in traffic flow can be observed on the local network some are in sensitive locations such as on the narrow roads near Stoke St Mary and between Hatch Beauchamp and Bickenhall. A statement is made to the effect that an assessment is being undertaken to determine whether these routes are of a suitable standard to accommodate additional traffic [9.1.3] but details of this assessment have not been provided. The County Council would wish to inform the methodology of this assessment given its importance in ensuring that local impacts are robustly assessed, taking into account the proposed stopping up of roads and subsequent redistribution of traffic on the local roads, and that solutions are developed on the basis of evidence.</p> <p>CC should be consulted about the assessment process that National Highways propose to employ to determine whether the local roads are of a suitable standard to accommodate additional traffic.</p>	<p>process relies on outputs from the traffic forecasts and these in turn require the scheme design to be fixed as scheme design changes result in changes in traffic flows. At the time of statutory consultation, the scheme design was not yet fixed in order to allow for adaptations to the scheme design to be made following the receipt of feedback from members of the public and stakeholders from the consultation process.</p> <p>Following statutory consultation further liaison with Somerset Council has taken place with a view to agreeing a set of mitigation measures on local roads. Details of the latest mitigation proposals on local roads are included as part of the ComMA Report (Document Reference 7.4).</p>	
399	Somerset County Council		<p>Traffic Technical Note Review - Impact on Traffic Flows on the Local Road Network</p> <p>The same paragraph [9.1.3] appears to present the conclusion of the assessment stating "In most cases the affected roads have sufficient capacity to cater for the forecast uplift in traffic."</p> <p>Modelled increases in traffic flows on Toneway, Taunton are, in particular, noted which is a traffic sensitive route where traffic congestion is an existing concern.</p> <p>11. Confirmation should be provided regarding whether the assessment is pending or already completed.</p> <p>12. Further detailed assessment is required of the modelled increases in traffic flows on Toneway, Taunton and the effect of the corridor to accommodate growth in the area.</p>	<p>National Highways has actively engaged with Somerset Council on the traffic impacts on the local road network and proposed mitigation measures where considered appropriate based on the change in traffic flows. National Highways' discussions with Somerset Council include impacts along the A358 Toneway, which have been determined to be sufficiently small meaning that no mitigation measures along Toneway are required as part of this scheme.</p>	No
400	Somerset County Council		<p>Traffic Technical Note Review - Impact on Traffic Flows on the Local Road Network</p> <p>The following paragraph [9.1.4] the states that</p> <p>"improvements are under consideration at selected locations where the forecast increase in traffic may potentially lead to congestion and these will be reviewed with Somerset County Council as the local highway authority."</p>	<p>National Highways acknowledges this comment.</p>	N/A
401	Somerset County Council		<p>Traffic Technical Note Review - Impact on Traffic Flows on the Local Road Network</p> <p>The criteria of "congestion" is not always the most appropriate one to determine the need for an intervention. There is no definitive description of congestion and within traffic model outputs reporting will be a function of the capacity which has been coded into the model. This capacity in turn is likely to be determined by the junctions as opposed to the links, whereas it is the links in rural locations which are of particular</p>	<p>Our consideration of impacts on the local road network includes consideration of capacity thresholds that have been defined based on best practice from other projects for the assessment of narrow single-track lanes. National Highways has also considered impacts on walkers, cyclists, and horse-riders, as well as other safety related aspects such as conflicts between vehicles or changes in vehicle speeds that would be likely to arise. Details of the methodology used for the assessment of local roads mitigation are given in the ComMA Report (Document Reference 7.4).</p>	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>importance to and are unlikely to be congested in an “urban” sense of queuing traffic.</p> <p>Therefore, the criteria should be extended to include for example whether there are sufficient opportunities for vehicles to safely pass one another on narrow lanes and whether there are other traffic management measures which are necessary to reduce the potential for adverse impacts to all users (including pedestrians, cyclists and equestrians) which additional traffic will be associated with, including reduced sense of safety associated with more interactions with traffic. The County Council would wish to inform the methodology of this assessment.</p> <p>13. Details of locations where improvements are currently being considered by National Highways should be provided to Somerset County Council</p> <p>14. Other criteria beyond congestion should be included when considering how the impact of increased traffic on communities and other road users should be measured and adverse impacts mitigated. Such criteria would need to consider the overall level and impact to specific localities and how these outputs are used to define triggers for solutions/ mitigation. SCC should be consulted about these criteria.</p>		
402	Somerset County Council		<p>Traffic Technical Note Review - Impact on Routing through the Local Road Network</p> <p>Figure 10-1 presents a schematic of routes which trips from local communities are likely to take to access the dual carriageway A358 with its two junctions for northbound or southbound movements. The junctions are to be grade separated and located at the A378 Mattock’s Tree and at Ashill. The assessment appears to be based on intuition as opposed to model outputs – which will be available from the forecast models using select link analysis. It would be preferable to include a composite of model outputs to confirm which routes the model is adopting.</p> <p>15. Model outputs should be provided to demonstrate the routes which are being used to assist with the analysis of whether the model outputs are reasonable.</p>	The material presented in Figure 10-1 of the A358 Technical traffic note was prepared on the basis of traffic model outputs.	N/A
403	Somerset County Council		<p>Traffic Technical Note Review - Summary and Recommendation</p> <p>The Technical Note provides some information but there are numerous areas where that information is presented inconsistently, so comparisons between base year model outputs and forecasts are not possible or presented in a format which is not immediately helpful and masks the actual impacts. The information provided about the local network in the Technical Note would also be improved by additional reporting, as noted above, to be provided for the base and forecast scenarios.</p>	National Highways acknowledges this comment.	N/A
404	Somerset County Council		<p>Traffic Technical Note Review - Summary and Recommendation</p> <p>Ultimately, the analysis appears to be showing that changes in traffic flows are relatively small and a function of local trips re-routing to access the A358 at the proposed new grade separated junctions at Matlocks Tree and Ashill. This localised re-routing means that there are</p>		Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			some roads which experience more traffic and others which will expect a decrease in traffic.		
405	Somerset County Council		Traffic Technical Note Review - Summary and Recommendation  The note is silent upon how impacts will be robustly assessed, taking into account the proposed stopping up of roads and subsequent redistribution of traffic on the local roads, to ensure solutions are developed on the basis of evidence. SCC should be consulted about the assessment process that National Highways propose to employ to determine whether the local roads are of a suitable standard to accommodate additional traffic and the criteria to consider the overall level and impact to specific localities and how these outputs are used to define triggers for solutions/ mitigation. This includes the potential for interventions in areas such as Ashill and Henlade to manage the speed of traffic through these locations.	Our consideration of impacts on the local road network includes consideration of capacity thresholds that have been defined based on best practice from other projects for the assessment of narrow single-track lanes. National Highways has also considered impacts on walkers, cyclists, and horse-riders, as well as other safety related aspects such as conflicts between vehicles or changes in vehicle speeds that would be likely to arise. Details of the methodology used for the assessment of local roads mitigation are given in the ComMA Report (Document Reference 7.4).	Yes
406	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 1, Introduction  SCC acknowledge and support the range of engagement undertaken through Community Forums, the Walking, Cycling and Horse-riding Forum and meetings with landowners and stakeholders, including the various Parish Councils.	National Highways acknowledges the range of views expressed, including those received in support of the approach to engagement on the project.	N/A
407	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 1, Introduction  SCC acknowledge that the emerging Environment Bill will likely be enacted during the design and construction stages of the proposed scheme and that an updated National Policy Statement for National Networks (NSPNN) is also expected in Spring 2023. SCC would encourage the National Highways Project Team to ensure stakeholders are kept informed of potential legislative and policy updates as the scheme progresses towards determination.	National Highways acknowledges the range of views expressed, including those received in support of the project. National Highways will continue to engage with stakeholders as legislation emerges.	N/A
408	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 1, Introduction  Reference should be made to the Somerset County Transport Plan-- Somerset's Local Transport Plan (called Somerset's Future Transport Plan) which sets out the County's long-term strategy for getting the best from transport: <a href="https://www.somerset.gov.uk/roads-and-transport/future-transport-plan/">https://www.somerset.gov.uk/roads-and-transport/future-transport-plan/</a>	A summary of key policies is provided within ES Chapter 1 Introduction (Document Reference 6.2). Policies relevant to each of the technical assessments are detailed within each of the ES Chapters 5-15 (Document Reference 6.2).	N/A
409	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 1, Introduction  SCC note that, subject to the DCO being Granted by the Secretary of State, construction is planned to start in late 2024 and the proposed scheme is due to open to traffic in mid-2028.	National Highways acknowledges reference to the anticipated scheme delivery timescales, subject to successful grant of the DCO.	N/A
410	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project  The Council strongly supports the need for the A358 between Taunton and Southfields to be upgraded to dual carriageway as part of an end-end whole route improvement of the A303/A358 between the M3 and the M5 at Taunton. If designed appropriately, the improvement will improve connectivity and access to the South West Region, improve the	National Highways acknowledges the range of views expressed by Somerset County Council, including those received in support of the project, and the objective to address the environmental impacts of traffic through the Air Quality Management Area (AQMA) of Henlade. Further detail of the assessment in relation to the AQMA is presented within ES Chapter 5 Air quality (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			resilience of the strategic road network and help to promote economic growth in the region. A principal objective and essential component of the scheme involves addressing the environmental (air quality and congestion) impacts of traffic flow through Henlade which is an Air Quality Management Area.		
411	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project</p> <p>Paragraph 2.5.1 sets out that the proposed scheme would be completed in line with current trunk road design standards. It is understood that National Highways will be applying DMRB (Design Manual for Roads and Bridges) GD300 as the design standard for the main line – this has been referenced in correspondence with affected Parish Councils and in related briefings. However, the consultation material does not specify the design standards that have been applied to the proposals to date, therefore the County Council would welcome formal confirmation of the design standards to be applied going forward. SCC also seek clarity on design standards to be applied to the local road network where it interfaces with the proposed scheme.</p>	<p>National Highways are using DMRB standards for the design of the scheme and assets intended to be owned and maintained by National Highways. GD 300 is one of numerous standards in DMRB that have been, and will be, used.</p> <p>Standards for local roads have been listed in the Local Roads Strategy prepared by National Highways and have been agreed with Somerset Council.</p>	N/A
412	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project</p> <p>It is noted that (Para.2.5.28) the provision of a new single carriageway link between Capland Lane and Village Road or the improvement of local roads to improve flood resilience, are options under consideration. SCC will continue to work collaboratively with NH and local stakeholders to find the most appropriate alternative. SCC will wish to engage through the technical workstreams to review the flooding issues and what measures might need to be taken. Confirmation from a modelling perspective is also required to support the option taken forward to detailed design so that the implications on the local road network can be fully assessed. SCC would also note that the options appraisal will need to consider any direct impact on the potential non-designated built heritage resources of the stone bridge on Stewley Lane and the bridge/culvert (unknown) and guidepost at the north end of Stock's Lane, and the impact on the setting of all local heritage resources.</p>	The options for the Capland area have been assessed and the Capland link option 1 has been chosen as the preferred option. This is included in the project design taken forward to DCO and is included in the ES (Document Reference 6.2). This decision has been discussed with the Council and has been presented at the supplementary public consultation undertaken in mid-2022.	Yes
413	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project</p> <p>It is noted that (Para.2.5.29) additional areas within the proposed scheme boundary have been included to allow for the inclusion of any resultant design changes. SCC welcome the addition of these areas and will continue to work constructively with National Highways as the scheme develops to ensure that all measures, including mitigation measures beyond the immediate corridor of the route are included as appropriate. Indeed, careful consideration should be given to the extent of the red line boundary for the scheme. The results of the traffic model are yet to be agreed and may conclude the need for mitigation works to the local road network outside of the current perceived footprint of the scheme. Should this be the case, alternative legal mechanisms for delivery would need to be considered where working on the public highway. It would be prudent therefore to ensure that any potential locations for mitigation works are contained within the red line boundary</p>	National Highways welcomes Somerset County Council comments in relation to mitigation measures and can confirm that the ES (Document Reference 6.2) and DCO documentation incorporates a revised scheme boundary. This incorporates mitigation required for the scheme.	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			of the scheme, and form part of the DCO application with the associated powers should consent be granted.		
414	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project  It is noted at paragraph 2.5.70 that the mainline is not proposed to be lit, apart from the immediate approaches to the Nexus and Southfields roundabouts. The County Council has recently developed a new Technical Advice Note 22/20 which provides guidance for the design, installation and handover of street lighting and illuminated traffic signs and should be considered by National Highways in developing the next stage of the design process.	National highways acknowledge the Technical Advice Note 22/20 and a concept lighting design in accordance with BS5489-1:2020 has been carried out using 'Lighting Reality' software in conjunction with the junction alignments developed for the preliminary design.	N/A
415	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project  Para. 2.5.71 – The Environmental Mitigation Plan and the fly-through video highlight the use of environmental/noise barriers along extensive lengths of the road corridor. This element of the scheme design is not covered in paragraph 2.5.71. The design of these barriers needs to be confirmed as part of the DCO submission (rather than as a matter of detailed design for the Requirements) as this will be relevant to determining their impact on the setting of heritage resources— please see comments relating to paragraph 2.6.7.	The fly-through video presented at statutory consultation in 2021 showed the initial proposed locations for noise barriers (bunds and fencing). The design has been further developed to finalise the location, heights and extents of noise barriers and the noise assessment presented in ES Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barriers is shown on Figure 7.8 Environmental Masterplan (Document Reference 6.3).	Yes
416	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project  SCC will wish to work collaboratively with National Highways and their contactors to manage any necessary local road closures and mitigate impacts to the local road network (Para. 2.5.89).	National Highways acknowledges this comment from Somerset County Council.	N/A
417	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project  Paragraph 2.6.7 – The embedded woodland and hedgerow creation is supported as a means to soften the visual impact of the scheme on heritage resources (although the impact on the setting of every heritage receptor will have to be judged on its merits). Of potential concern is the impact of embedded hard landscape features, in particular the extensive use of environmental/noise barriers in the absence of sufficient fill material for screening bunds (para. 2.5.39). The use of noise barriers, and their design, will need to be assessed in relation to the impact on the setting of sensitive heritage resources.	The landscape and visual impacts of any bunds or barriers has been assessed within ES Chapter 7 Landscape and visual effects (Document Reference 6.2). Noise mitigation measures have been incorporated into the design following an assessment of the noise impacts and effects of the scheme at all noise sensitive receptors. Noise mitigation measures including low noise surfacing, bunds and fence barriers, have been used to reduce or remove significant noise effects, or provide enhancement, where it is effective and sustainable to do so. Bunding has been considered, by preference, in each location and only ruled out where other engineering or environmental constraints have dictated it. The appearance and specification of noise barriers will be developed during detailed design, subject to successful DCO consent. An updated description of the design including embedded mitigation is presented in ES Chapter 2 The project (Document Reference 6.2).	N/A
418	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project  Paragraph 2.6.9 – The mitigation measures will be described within the Detailed Archaeological Mitigation Strategy and Overarching Written Scheme of Investigation. It is agreed that this is a sensible approach to implementation of a mitigation strategy.	National Highways welcomes support for approach to mitigation strategy.	N/A
419	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project	Discussions were undertaken with the council with relation to the Bickenhall Lane WTS. The loss of this facility has been included in the ES and is assessed within ES Chapter 9 Geology and soils, ES Chapter 10 Material	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Paragraph 2.7.16 – should also make reference to the SCC waste transfer station at Bickenhall Lane. Being an allocated WTS, engagement with the County Council will be required in terms of impact and potential relocation/ reprovion of this operational facility	assets and waste and ES Chapter 12 Population and human health (Document Reference 6.2).	
420	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 2, The Project  SCC note (Para. 2.9.1 & 2.9.2) a Maintenance and Repair Strategy Statement (MRSS) would be prepared following engagement with the National Highways Maintenance and Operation team. SCC consider that, as the Local Highway Authority, we should also be included in the preparation of the MRSS.	The Maintenance and Repair Strategy Statement (MRSS) is a National Highways internal document and focussed on the National Highways asset. If any aspects of the MRSS relate to the local road network, these will be shared with Somerset Council as required.	N/A
421	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 3, Assessment of Alternatives  It is noted that three design changes that have been made since Project Control Framework stage 2 which have not been subject to an options appraisal as they are considered design development by National Highways being:  • Improvements to Nexus 25 roundabout  • Omission of retaining walls at Stoke Road overbridge  • Provision of a segregated left turn lane (SLTL) between the A358 and A303 eastbound at Southfields roundabout	National Highways acknowledges the comments made.	N/A
422	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 3, Assessment of Alternatives  Comments in relation to the Stoke Road overbridge are set out at paragraph 3.1 of the Appendix A.	National Highways acknowledges the comments made; responses are provided in full on the relevant sections.	N/A
423	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 3, Assessment of Alternatives  In relation to the Nexus 25 and Southfields Roundabouts, further work is required to substantiate the junction designs but this can only be determined once the transport model is considered robust (inputs, methodology and assessment of findings all agreed). The County Council will wish to be satisfied with the outputs of the detailed design processes in relation to the operational performance of the local highway network.	Following statutory consultation in 2021, the proposed arrangement at Nexus 25 has been amended from a roundabout to a signalised junction. This design change has been assessed as part of the ES within ES Chapter 3 Assessment of alternative (Document Reference 6.2) and has been modelled in the transport model.	Yes
424	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 3, Assessment of Alternatives  It is noted that options appraisals have been undertaken following feedback received through Community Forums and dialogue directly with affected Parish Councils. SCC would encourage National Highways to continue to liaise and work with local communities to find solutions to address the concerns they have raised where it is feasible and appropriate to do so.	National Highways acknowledges the comments made, engagement with local communities is ongoing outside of consultation periods and detailed in Chapters 2, 6 and 9 of the Consultation Report (Document Reference 5.1).	N/A
425	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 4, Environmental Assessment Methodology	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Paragraph 4.3.2 – The study area for non-designated built heritage resources is considered inadequate. Please see the comments against paragraph 6.5.6 of Chapter 6.	qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	
426	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 4, Environmental Assessment Methodology  Paragraph 4.3.9 to 4.3.11 – A desktop assessment and field survey of potential non-designated built heritage assets within the existing and an extended study area is required. Please see the comments against paragraph 6.6.12 and 6.6.16 to 6.6.19 of Chapter 6.		N/A
427	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 5, Air Quality  SCC continues to work with SSDC and SWT to review the proposals being developed by National Highways. Each authority is responding on matters within their direct remit only – for that reason, SCC does not offer detailed comments on this topic, other than to suggest that appropriate references are made to its Future Transport Plan given in particular its commitment to work to minimise the effect that any changes to Somerset's transport systems have on air pollution.	National Highways acknowledges the collaborative work undertaken by the Joint Councils (as were) and the scope of SCC's response to statutory consultation. The Future Transport Plan has been reviewed as part of ES Chapter 5 Air quality (Document Reference 6.2).	N/A
428	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 5, Air Quality  In addition, the County Council is pleased that a principal objective and essential component of the scheme involves addressing the environmental (air quality and congestion) impacts of traffic flow through Henlade which is an Air Quality Management Area.	National Highways acknowledges the range of views expressed, including those received in support of the project, and the objective to address the environmental impacts of traffic through the Air Quality Management Area of Henlade.	N/A
429	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.1.1 – The methodology (DMRB) is an accepted method to assess impacts on buried archaeology on infrastructure projects. DMRB sets out the techniques to apply to assets to understand their significance and to qualify the potential impacts on assets.	National Highways acknowledges support for the proposed assessment methodology.	N/A
430	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.3.1 – Local guidance issued by the South West Heritage Trust (SWHT) is utilised in the Assessment methodology as well as the expected professional guidance issued by the Chartered Institute for Archaeologists and Historic England. This is welcomed by SCC.		N/A
431	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.5.6 – The study area of 250m is appropriate in terms of assessing adverse effects on non-designated heritage assets with archaeological interest (i.e. buried archaeology).		N/A
432	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.6.20 – The initial assessment of potential for archaeological survival within the scheme boundary is broadly high. This is a reasonable assessment. The periods with the most potential		N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			are described and on current knowledge are realistic. The assessment surveys described in 4.3.11 will further clarify the assets present on the scheme and enable the significance of assets to be described and any potential impacts assessed through the application of DMRB.		
433	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.6.21 – The division into 8 Historic Landscape Character Areas (HLCAs) is a sensible method of cataloguing distinct areas. The identification of these 8 HLCAs is accepted based on their shared characteristics.		N/A
434	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.6.24 – The assessment of the value of non-designated heritage assets is appropriate based on current knowledge.		N/A
435	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.6.25 – The value of 6 HLCAs as low and two HLCAs with potential medieval activity as medium is appropriate.		N/A
436	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.2.4 – With regards to paragraph 5.125 of the NPSNN, the PEIR is unlikely to include a full assessment of all non-designated heritage resources as the Somerset Heritage Environmental Record (HER) has limited information on non-designated built heritage (standing buildings and structures) resources and there is no evidence of any further assessment work, or confirmation from the Local Planning Authority of the non- designated heritage assets in the study area.	The limitation in the Historic Environment Record (HER) data is noted. National Highways has undertaken wider desk-based assessment, including reference to published studies, historic mapping and walkover survey. This is reported in the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
437	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  This matter is discussed further in relation to paragraphs 6.6.12 and 6.6.16 to 6.6.19 of Chapter 6.	National Highways acknowledges this comment.	N/A
438	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Further assessment of the baseline data for non-designated built heritage resources is required in line with the comments below for 6.5.6, 6.6.12 and 6.6.16 to 6.6.19.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority or where they are within the zone of theoretical visibility (ZTV). If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
439	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage	National Highways acknowledges this comment.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			Paragraph 6.2.10 – With regards to paragraph 203 of the NPPF, the same comment is applicable as made above against paragraph of 6.2.4 of Chapter 6.		
440	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.3.3 and Table 6-2 – With regards to Table 6-2, the 'Medium' category of 'Value of resources' should include those built heritage and designed landscape non- designated heritage resources of regional and county significance, in addition to 'some non-designated heritage remains'. These resources would ideally be identified in a local heritage list. The Somerset Local Heritage List is currently emerging.	National Highways acknowledges this comment and has addressed it within the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
441	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Candidates for the draft Local Heritage List should be identified through this decision- making process, and submitted to the relevant Local Planning Authority for confirmation prior to the submission of the DCO. These heritage resources should then be treated as being of 'Medium' value.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
442	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  In relation to Table 6-2, Grade II Registered Parks or Gardens should be included within the 'High' value category of heritage resources; being of national value. Grade II Registered Parks and Gardens are included on the National Heritage List for England, and the Historic England selection guides for the Register of Parks and Gardens state that registered sites of all grades are considered to be of a sufficiently high level of special historic interest to merit a national designation. Furthermore, paragraph 5.131 of the NPSNN makes no distinction between the value of Grade II Listed Buildings and Grade II Registered Parks and Gardens.	National Highways acknowledges this comment and has addressed it within the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
443	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.4.1 – The planned historic building assessment of the non-designated Bath Cottage, West Hatch (outside of the District of South Somerset), is supported. However, there are other historic buildings, not ear-marked for demolition, that warrant an assessment. Please see the comments for paragraph 6.2.4, 6.6.12, and 6.6.16 to 6.6.19 of Chapter 6.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
444	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.4.2 – Photomontages will be an equally valuable tool for assessing the impact on the 'setting' of sensitive heritage assets. Agreement on key views from sensitive designated and non-designated heritage resources, and the production of additional photomontages,	National Highways acknowledges this concern. Key views have been included in the description of heritage resources' setting, where applicable, in the ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4), specifically Appendix 6.3 Gazetteer of Heritage Resources (Document Reference 6.4).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			should be undertaken with the relevant Local Planning Authority (LPA) prior to the DCO submission.		
445	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.5.2 – The proposal for a 1 km buffer from the proposed scheme boundary for designated heritage resources is accepted, with the addition of particularly sensitive heritage resources captured in the Zone of Theoretical Visibility.	National Highways acknowledges support for the proposed assessment methodology.	N/A
446	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.5.6 – A 250 metre buffer for all non-designated heritage resources is considered inadequate.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
447	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  In conjunction with the observations on paragraph 6.3.3, some of the non-designated heritage resources may be of 'Medium' value (recognised at a regions scale). Thus, they could be subject to a 'Moderate' magnitude of impact if their setting makes a key contribution to their significance or appreciation and the proposed scheme is assessed as being highly intrusive. This scenario could occur beyond a 250 metre buffer, although unlikely beyond the 1 km buffer set for designated heritage resources. The number of Local Heritage List candidate assets with a strong contribution from their setting within a 1 km buffer is likely to be minimal but to merit assessment. The DMRB LA 106 Revision 1 does not set a limit on the study area for 'other cultural heritage resources' apart for being within the zone of visual influence.		N/A
448	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  A 250 metre buffer is accepted for all other non-designated heritage resources (of Low and Negligible value) as the construct of the Significance Matrix in DMRB LA 104 Revision 1 (Table 3.8.1) would not register a significant effect for a non-designated heritage resources without physical loss or severe damage.	National Highways acknowledges support for the proposed assessment methodology.	N/A
449	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  An additional buffer of 1 km is required for the non-designated heritage resources of 'Medium' value and the baseline date for this study area assessed in line with the comments relating to paragraphs 6.6.12 and 6.6.16 to 6.6.19.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
450	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.6.1 – In line with the comments for paragraph 6.5.6, the baseline condition for the study area for non-designated heritage resources of local heritage list potential is considered inadequate.		N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
451	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.6.22 to 6.6.25 – The values assigned to Grade II Registered Parks and Gardens and to non-designated built heritage resources of regional and county interest (candidate assets for the Somerset Local Heritage List) are challenged. Please refer to the comments against paragraph 6.3.3 and Table 6-2.	National Highways acknowledges this comment and has addressed it within the ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4).	N/A
452	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.6.12 and 6.6.16 to 6.6.19 – The baseline data for non-designated built heritage resources (standing buildings and structures) is likely to be incomplete for the scheme boundary and a 250 metre buffer study area, and would on the current model be incomplete for non-designated built heritage resources of local heritage list potential within a 1 km buffer study area.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
453	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  The baseline condition for non-designated built heritage resources is set out in Appendix 6.1 and Appendix 6.2. The gazetteer is based on the entries in the Somerset HER. The HER has limited information on built heritage entries, especially farmstead and domestic buildings, which are normally added following their assessment for planning applications. Whereas industrial and infrastructure heritage resources are well represented following the activities of the local industrial archaeology group.	The limitation in the Heritage Environment Record (HER) data is noted. National Highways has undertaken wider desk-based assessment, including reference to published studies, historic mapping, and walkover survey. This is reported in the ES submitted within the DCO Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
454	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  The shortfall of historic farmstead and domestic buildings is demonstrated by the table below, which is an extract of all the extant non-designated built heritage resources within the 250 m buffer study area. This shortfall is despite the buffer encapsulation numerous historic farmsteads, individual buildings and hamlets (as identifiable from the 1902 2nd Edition OS). Very few historic buildings are identified in the gazetteer: only two former smithies; one farmhouse; one former tollhouse; and two former industrial building complexes. Only one other non-designated building, not included on the Somerset HER, is identified as having potential heritage interest, and flagged due to its proposed demolition: Bath Cottage, West Hatch (see section 4.2.1 of Appendix 6.1). (Table provided)	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural Heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
455	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  The baseline data for non-designated built heritage resources needs to be expanded with an assessment of:  a) For the scheme boundary and a 250 m buffer, all potential non-designated built heritage resources, or cluster of resources, as evident from the 1902 Second Edition OS.		N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			b) For a 1 km buffer (including the 250 m buffer), all potential non-designated built heritage resources that fall with the Zone of Theoretical Visibility or would be subject to significant adverse noise impact, and satisfying the draft Selection Criteria of the Somerset Local Heritage List Project.		
456	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  The subsequent list of non-designated built heritage resources for these study areas should be shared with the relevant Local Planning Authority prior to the DCO submission, including for confirmation of which non-designated built heritage resources would be considered candidates for the emerging Somerset Local Heritage List.		N/A
457	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.7.3 to 6.7.8 – The report states that operational vibration has been scoped out of the noise topic assessment, and paragraph 6.7.8 states that the impact of the construction activities would be ‘temporary, of limited duration and reversible’. It is unclear if construction vibration (compaction plant, rock breaking machinery, impact piling, etc.) is scoped in or not. From our experience of considering mineral and highway activities, we are aware that traffic and ground-borne vibration can result in building damage; initially subtle (opening up of small cracks, plasterwork damage), which can be the forerunner of later structural failure. The seismic vibration from the ‘bump down’ of HGVs on an uneven road surface being of note. Historic buildings will often have elements of delicate or decayed fabric and poorly bedded masonry, which may not conform to standard empirical models.		N/A
458	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Construction and operational vibration should be included in the assessment of impacts, and a programme of monitoring implemented during the construction stage for sensitive historic building receptors.	National Highways acknowledges this concern. The impact of vibration on heritage assets. Consideration of noise and vibration effects on cultural heritage assets has been included within the ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4) and mitigation relating to construction techniques addressed where appropriate.  Vibration construction mitigation measures are documented within ES Chapter 11 Noise and vibration (Document Reference 6.2) and within the Environmental Management Plan (ES Appendix 2.1, Document Reference 6.4). Should monitoring of a heritage asset be required this is recorded in ES Chapter 6 Cultural heritage.	N/A
459	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.8.8 – Mitigation measures may be required for non-designated built heritage resources following an extension of the baseline, as outlined in the above comments.	National Highways acknowledges the comment made in relation to mitigation measures. Where mitigation is required, this has been described in the ES Chapter 6: Cultural heritage (Document Reference 6.2) and Appendix 2.1 Environmental Management Plan (Document Reference 6.4).	N/A
460	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.9 – A review of the construction and operational significant effects will be undertaken when the baseline data and assessment are complete.	National Highways notes this comment.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
461	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Table 6-5 of Chapter 6 – A record of the parish for each of the heritage resources in this and other tables would be useful.	The ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) includes the data 'as received' from the Historic Environment Record.	N/A
462	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Paragraph 6.11.9 – An extension of the baseline data for non-designated built heritage resources is required, as outlined in the comments for paragraphs 6.6.12 and 6.6.16 to 6.6.19.	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
463	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Appendix 6.3 – A review of the gazetteer of heritage resources will be undertaken when the baseline data is complete. A record of the parish for each of the heritage resources in this and other tables would be useful.	The ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) includes the data 'as received' from the Historic Environment Record.	N/A
464	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Appendix 6.4 – A review of the impact assessment or each of the heritage resources will be undertaken when the baseline data and assessments are complete. Where tree cover is cited as a screen, it should be borne in mind that deciduous trees are without leaf for 6 months of the year and individual trees, small clumps or narrow belts do not provide a good screen during this period. This needs to be taken into considered for the assessment.	National Highways notes the comments made. Summer and winter views from representative viewpoints across the scheme for the year of opening and 15 years after following the establishment of mitigation. The viewpoints are assessed and presented within ES Chapter 7 Landscape and supporting appendices (Document References 6.2 and 6.4).  The cultural heritage assessment has taken into consideration the landscape viewpoints within the assessment of effects on heritage assets presented in ES Chapter 6 Cultural heritage and supporting appendices (Document Reference 6.2 and 6.4).	N/A
465	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  It would be helpful to have a combined version of the Magnitude of impact (Table 1-1) and the Significance of effect (Table 1-2). This would only require the addition of the significance of effect columns to Table 1-1.	National Highways has presented the tables as requested in ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
466	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  A record of the parish for each of the heritage resources in this and other tables would be useful.	The ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4) includes the data 'as received' from the Historic Environment Record.	N/A
467	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage  Table 6.5 – The assessment of impacts on buried archaeological heritage assets are reasonable and the mitigation strategies outlined are appropriate.	National Highways acknowledges the support for the proposed assessment methodology and mitigation strategies.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
468	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 6, Cultural Heritage</p> <p>Summary &amp; Recommendations</p> <p>6.6.41 The suite of techniques described in the PEIR reflect the appropriate methods for detection, identification and assessment of buried archaeological heritage assets. The use of DMRB as an assessment tool is in line with other infrastructure projects and is a suitable methodology to appraise the significance of impacts. The identification and assessment of HLCAs is appropriate. However, a 250 metre buffer for all non-designated heritage resources is considered inadequate. The baseline condition for the study area for non-designated heritage resources of local heritage list potential is considered also</p>	National Highways acknowledges the significance of non-designated heritage assets, which can potentially be of national importance. As such, a qualitative approach has been taken to the assessment. National Highways considers that the 250m study area is appropriate for the assessment on non-designated heritage assets and all non-designated heritage assets within that area have been assessed. Additionally, however, National Highways has undertaken assessment to consider specific buildings of local importance within 1km where these are proposed by the local planning authority. If a significant effect is likely to occur, it has been reported in the updated assessment presented within ES Chapter 6 Cultural heritage and supporting appendices (Document References 6.2 and 6.4).	N/A
469	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 7, Landscape</p> <p>SCC continues to work with SSDC and SWT to review the proposals being developed by National Highways. Each authority is responding on matters within their direct remit only – for that reason, SCC does not offer comments on this topic.</p>	National Highways acknowledges the comments raised by each of the Joint Councils (as were), and notes that the roles and responsibilities of each have since been subsumed into the new unitary authority of Somerset Council, as set out in the Statement of Common Ground with Somerset Council (see Statement of Commonality Document Reference 7.3).	N/A
470	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 8, Biodiversity</p> <p>SCC continues to work with SSDC and SWT to review the proposals being developed by National Highways. Each authority is responding on matters within their direct remit only – for that reason, SCC does not offer comments on this topic.</p>	National Highways acknowledges the comments raised by each of the Joint Councils (as were), and notes that the roles and responsibilities of each have since been subsumed into the new unitary authority of Somerset Council, as set out in the Statement of Common Ground with Somerset Council (see Statement of Commonality Document Reference 7.3).	N/A
471	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 9, Geology and Soils</p> <p>Detailed matters associated with geology and soils that impact road construction will be reviewed as part of the detailed design proposals, however the information laid out appears to be appropriate and factually accurate.</p>	National Highways acknowledges this comment.	N/A
472	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Minerals)</p> <p>The alignment of the proposed new road will not affect any existing quarry site, nor will it be located in any Mineral Safeguarding Area. Thus, no policy issues are raised in respect of mineral safeguarding.</p>	National Highways acknowledges no issues raised in respect of mineral safeguarding.	N/A
473	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Minerals)</p> <p>With regard to aggregate use for the project, the PEIR does refer to seeking to maximise use of site won and recycled material assets which is to be welcomed. Policy SMP1 of the Somerset Minerals Plan deals with the supply of recycled and secondary aggregates. It is noted that due to the scheme being at an early design stage, estimates of the quantity of primary and secondary materials required at this stage are not available. Thus, a high level assessment has been undertaken at this stage focusing upon those construction activities requiring the most significant quantities of material. The PEIR does refer to the last published Local Aggregate Assessment which shows a healthy</p>	National Highways acknowledges this comment. Engagement with aggregate suppliers will take place during detailed design, subject to successful DCO consent.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			landbank for crushed rock. However, early engagement with aggregate suppliers will be important to ensure adequate supply.		
474	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Minerals)</p> <p>It is noted at para 2.5.85 that borrow pits are not currently envisaged required but this will be reviewed as the detailed designs are progressed. SCC would draw attention to Policy DM13: Borrow Pits. From a mineral policy perspective, borrow pits are supported subject to it being adequately demonstrated that the borrow pit</p> <ul style="list-style-type: none"> <li>• lie on or in close proximity to the construction project so that material can be conveyed to its point of use with minimal use of public highways;</li> <li>• be limited to the life of the project;</li> <li>• serve only the project; and</li> <li>• be restored to its original levels or an alternative acceptable landform only utilising materials from the construction project.</li> </ul>	National Highways acknowledges this comment.	N/A
475	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Waste)</p> <p>The PEIR states clearly that this construction project will be managed in accordance with the Waste Hierarchy as defined in the Waste Regulations 2011. Moreover, a clear priority is to use as much of site won material as is possible and practicable within the project. In particular, it is noted that in regard to earthwork material assets, 99% shall be re-used and recycled meaning that only a minimal amount will need to be sent to landfill, thus achieving a very near earthworks balance. Approximately 11,000 tonnes has been calculated as unfit for recycling. The PEIR states that this can be accommodated within the existing South West landfill capacity.</p>		N/A
476	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Waste)</p> <p>The PEIR states that the scheme will be accompanied by a Materials Management Plan, a Site Waste Management Plan and in compliance with the CL:AIRE code of practice for the re-use of excavated materials. The approach set out for reducing the level of waste and the re-use of material as part of the project is in accord with Policies WSC1 (Waste Prevention) and WCS2 (recycling and re-use) of the adopted Waste Core Strategy.</p>		N/A
477	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Waste)</p> <p>In respect of waste site safeguarding, it is noted that the study area does include Bickenhall Lane Waste Transfer Station (WTS) which is operational. It is not discussed in Chapter 10 but the location is identified in Figure 10.1 (waste management facilities for CDW in the second study area). Being an allocated WTS, engagement with the Council will be required in terms of impact and potential relocation/reprovision of this operational facility.</p>	Discussions were undertaken with Somerset Council with relation to the Bickenhall Lane Waste Transfer Site. The loss of this facility has been included in ES Chapter 9 Geology and soils, ES Chapter 10 Material assets and waste and ES Chapter 12 Population and human health (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
478	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Waste)  It is also important to raise the proximity of the route alignment to Ham Street WWTW, which includes two permitted waste management facilities (sludge treatment and digestion). It is advised that the respective facility operators are consulted on the proposals.	National Highways acknowledges the comments in relation to Ham Street WWTW, the respective facility operators will be engaged during detailed design, subject to successful DCO consent.	N/A
479	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Waste)  Six historic landfill sites have been identified within 500 metres of the site with 2 of those being intersected by the new road. It is noted that appropriate mitigation will be designed and incorporated into the Environmental Statement once further work and a land contamination risk assessment is undertaken. Mitigation is important to ensure that no harmful adverse impacts are caused to the environment or any local residents once the historic landfills are disturbed by the construction work.	National Highways acknowledge support for the proposed mitigation in respect of historic landfills.	N/A
480	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 10, Material Assets and Waste (Waste)  In addition, with regard to hazardous landfill, whilst Walpole landfill is non-hazardous, it does have a stable non-reactive hazardous waste cell for disposal of asbestos containing materials. Also, we note the comment regarding no inert landfill in Somerset (para 10.6.9), but there are a number of inert recovery sites operating that provide some capacity. Details can be provided if required.	Details relating to Walpole landfill have been included within ES Appendix 13.1 Material assets and waste baseline (Document Reference 6.4).	N/A
481	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 11, Noise and Vibration  SCC continues to work with SSDC and SWT to review the proposals being developed by National Highways. Each authority is responding on matters within their direct remit only – for that reason, SCC does not offer comments on this topic.	National Highways acknowledges this comment.	N/A
482	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 12, Population and Health  SCC support the potential health benefits related to improved air quality and the potential for enhanced active travel and recreational opportunities.	National Highways welcome support for the scheme in relation to population and health benefits.	N/A
483	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 12, Population and Health  The following detailed points are offered in connection with the consideration of Public Rights of Way  Table 12.1 - This should also include 3.15, 3.21, 4.60, and 5.180.  12.2.9 - This should include Somerset's Rights of Way Improvement Plan 2. Some relevant extracts being:  · Action 1.4: Continue to ensure that improvements to the rights of way network are secured through planning applications and that the necessary funds and agreements are sought to implement improvements.	The majority of public rights of way in the study area involve footpaths. The revised scheme, as an outcome of consultation, would affect 29 footpaths. Ten bridleways would also be affected: T 31/36, T 14/8, T 14/25, CH 1/UN, CH 1/25, CH 1/26, CH 1/27, CH 2/23, CH 2/25, CH 2/26.  Many rural roads are attractive to walkers, cyclists and horse-riders and the numbers of people can be greater than the numbers of vehicles. The baseline for population and health includes all local roads in the environmental assessment.  All comments on walking, cycling and horse-riding (WCH) proposals have been carefully considered and the proposals are detailed in in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>· Policy Statement 3.1: When improving PRoW or creating new PRoW, an inclusive approach will be taken from the outset, so that wherever possible the routes will be accessible to horse riders, cyclists, walkers and those with visual and mobility impairments.</p> <p>· Policy Statement 3.2: When creating, improving or diverting PRoW, we will endeavour to improve connectivity of the network and improve safety when emergence onto or crossing a road is part of the proposal.</p> <p>· Action 3.18: Work with developers and relevant stakeholders to streamline, develop and improve the PRoW network within and in the vicinity of development. Local mitigation and strategic improvements will be sought through public path orders and where necessary, physical works.</p> <p>12.3.7 Please confirm if Strava Metro data was sourced (free) and analysed to help inform the baseline for walking/cycling/running.</p> <p>Table 12-2 Low - Disuse through past severance should not fall into low sensitivity. There can often be considerable latent demand that is held back by severance, or lowly used at great safety risk.</p> <p>12.6.27 - Public bridleways are also affected by the scheme.</p> <p>12.6.30 - Other Routes with Public Access (ORPAs) only represent a minority of unclassified roads. All local roads should be considered available for NMU use and not be overlooked as part of the baseline. Not all of the path network is truly connected for all NMUs, therefore many classified and unclassified roads form essential parts of NMU journeys, complementing the path network.</p> <p>12.9.46 &amp; 47 - This is a very narrow assessment of the effect of the scheme and it is suggested that the routes within the 500m buffer should be considered from a direct amenity effect, not indirect. Taking a too narrow approach when looking at effects can leave a very non-sensical or illogical network remaining and does not fully recognise the broader effect on the use and relevance of routes when they are disconnected or significantly diverted by a scheme such as this. Suggestions have been made where a broader approach would be to everyone's benefits (see Appendix A).</p> <p>12.9.50 - This should also reference connections to the Neroche Herepath</p> <p>12.9.55 - This should not disregard the Neroche Herepath, despite a section being under temporary closure currently.</p> <p>12.9.61 This is not the case all structures as some are excluding cyclists and horse riders.</p> <p>12.9.62 Should refer to SCC not SWT</p> <p>12.9.83 This suggests the scheme improves journey times and thereby the sense of connectivity. It is not clear what network and which users this is referring to. It is assumed it is only referring to the dual carriageway and not the local road and path networks which experience some severance, albeit that it is acknowledged that the scheme should enable active travel modes where currently at-grade crossings act as a deterrent.</p>	<p>by the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4). An assessment of walking, cycling and horse-riding is provided in ES Chapter 12 Population and human health (Document Reference 6.2). That assessment has been undertaken in accordance with the DMRB LA112 standard. The assessment focusses on direct effects on those routes crossing the alignment of the scheme which will be affected during construction and operation of the route. In addition, the assessment has looked at indirect effects on other PRoW / WCH routes within 500m, focussing on, but not excluding, those running parallel to the route.</p> <p>The strategy for walking, cycling and horse-riding has been reviewed and the revised scheme retains an ability for walkers to use the Fivehead River underbridge. The status of connecting rights of way to the underbridge is outside the scope of the scheme</p> <p>Most new structures would be classified as either public highway or a public right of way. Taking into account scheme changes as an outcome of consultation, there are nine crossings that could be used by walkers, cyclists and horse-riders. Fivehead River underbridge would be for walkers only and is subject to permissive rights of way, the status of which is outside the scope of the scheme. One crossing would be a cattle creep, not publicly accessible, and some additional structures would cater for watercourses.</p>	

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
484	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 13, Road Drainage and Water Environment  SCC as Lead Local Flood Authority (LLFA) have been engaging directly with National Highways consultants regarding the flood risk aspects and surface water drainage design for this project, and look forward to continuing to work with National Highways as their fluvial modelling, detailed surface water drainage design and Final Flood Risk Assessment (FRA) for the Environmental Statement (ES) progresses.	As stated, the project team and Somerset Council as Lead Local Flood Authority have been in regular contact, and we are aiming to continue to discuss flood risk issues as the design and assessment develops. ES Chapter 13 Road drainage and the water environment and its supporting appendices (Document Reference 6.2 and 6.4) provides an assessment of flood risk and surface water drainage.	N/A
485	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 13, Road Drainage and Water Environment  Whilst the surface water drainage scheme and accompanying FRA is still being developed, early consideration should be given to providing a betterment to downstream flood risk through controlling flows from the upstream catchments.	Opportunities to remove existing flood risk issues have been implemented by introducing flood compensation measures and providing a sustainable system that operates up to the 1% annual probability storm including a 40% allowance in terms of rainfall intensity to take account of climate change. Open surface water features have been implemented as attenuation features, although they will provide a water quality treatment function as well.	N/A
486	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 13, Road Drainage and Water Environment  We are pleased to see that our previously recommended discharge rates of 2l/s/ha for the River Tone catchment and QBar of 5.06l/s/ha have been taken forward into the detailed drainage design (Section 3.2.30 of the FRA in Appendix 13.1). In existing sections of the route, the development should provide a betterment on existing flows starting from QBar. The requirements for 'Long Term Storage' / Sustainable Drainage Systems (SuDS) must also be considered when determining discharge volumes for each section / network of the development.	The drainage design key principle is to provide a sustainable system that operates up to the 1% annual probability storm including a 40% allowance in terms of rainfall intensity to take account of climate change. Open surface water features have been implemented as attenuation features, although they will provide a water quality treatment function as well.  Where the design has to deviate from these principles a clear rationale has been provided as to why and any mitigation provided.	N/A
487	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 13, Road Drainage and Water Environment  SuDS should be above ground where possible and include swales and basins in order to provide multiple levels of treatment. Multiple smaller features should be considered, increasing the resilience of the design and cascading drainage through a series of SuDS features. The design should avoid as much as feasible, a 'pipe-to-pond' arrangement. As included in the PEIR FRA, the drainage design must include a +40% climate change allowance. Detailed information will be required as the drainage design progresses to demonstrate how any flooding will be retained / directed to drainage features.	The drainage design key principle is to provide a sustainable system that operates up to the 1% annual probability storm including a 40% allowance in terms of rainfall intensity to take account of climate change. Open surface water features have been implemented as attenuation features, although they will provide a water quality treatment function as well. The drainage design has been assessed using the National Highways Water Risk Assessment (HEWRAT) tool to determine where multiple levels of treatment are required, and this approach has been implemented where necessary. However, it has often been necessary to utilise pipes to connect the carriageway to attenuation features due to other constraints. These has been clearly explained in the final drainage design report. The methods used to ensure surface water is directed into the proposed drainage infrastructure have also been clearly described.	N/A
488	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 13, Road Drainage and Water Environment  As stated in section 13.8.5, Land Drainage Consent (LDC) will be required from the LLFA for any works (temporary or permanent) that impede the flow of an Ordinary Watercourse. This includes but is not limited to alterations or realignments of existing watercourses, extensions to existing culverts or installation of new culverts.	The project team has recognised the need for Land Drainage Consents and much of the analytical work done at this preliminary design stage will be taken and enhanced to support permit applications made post submission of the DCO application.	N/A
489	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 13, Road Drainage and Water Environment  With regards to the future maintenance of structures, an easement of 5-8m from top of banks and any culverts etc should be provided to allow sufficient gradient for self-cleansing velocity. A maintenance schedule	These requirements reflect comments received during engagement that took place through the design and development stage s of the scheme and have been taken account of in design decisions.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			will also be required so that the LLFA understands who will maintain the drainage infrastructure and also how often.		
490	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 13, Road Drainage and Water Environment</p> <p>It is noted that the provision of a new single carriageway link between Capland Lane and Village Road or the improvement of local roads to improve flood resilience, are options under consideration. SCC will continue to work collaboratively with NH and local stakeholders to find the most appropriate alternative. The LLFA will wish to engage through the technical workstreams to review the flooding issues and what measures might need to be taken.</p>	Somerset Council's proactive stance on engagement and help with design development is welcomed by National Highways.	N/A
491	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate</p> <p>The Somerset Local Authorities adopted a Climate Emergency Strategy in 2020 which identifies the outcomes to be achieved and the steps each organisation, individual community and household needs to commit to, to work towards Somerset being carbon neutral by 2030 and help build our resilience against the impacts of Climate Change both now and in the future. Transport is a main source of emissions in Somerset and has a direct impact upon how we manage and respond to Climate Change in Somerset, and the following measures are set out in the Strategy:</p> <ul style="list-style-type: none"> <li>• An urgent, radical shift is needed away from conventional petrol and diesel vehicles to electric and low emission vehicles to cut emissions and air pollution from transport.</li> <li>• Greater investment is needed in public transport to improve the quality and the size of the public transport network across the County.</li> <li>• Changes to travel behaviours - everyone needs to reduce the number of miles travelled in cars, vans etc.</li> <li>• Improvements to footpaths and cycleways are needed to encourage more local journeys to be undertaken by cycling and walking.</li> <li>• The transport and drainage networks need to be 'futureproofed' to cope with more extremes of weather and climate.</li> <li>• Future developments need to be centred around local services and places to work to reduce the need to travel.</li> </ul>	<p>All projects have a range of benefits and disbenefits on the environment, and it is unusual for a road project to meet all aspirations. Therefore, the measure of environmental responsibility is always a balanced amalgam of all environmental benefits and disbenefits. With regards to carbon, we have assessed both embodied and tailpipe carbon using the methodologies identified in DMRB LA114 Climate, and the best information available to date. Whilst the assessment is made using a well-defined transport model, input from a construction partner has not occurred at this stage. Therefore, the construction assessment is based on a set of professional judgements regarding construction opportunities to reduce carbon. National Highways will update the assessment of both tailpipe emissions and construction carbon, and through the detailed design, seek to reduce embodied carbon through issues such as reused of geotechnical materials arising from the scheme, and reduction of vehicle emissions.</p> <p>The updated assessment is presented as ES Chapter 14 Climate (Document Reference 6.2).</p>	N/A
492	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate</p> <p>Paragraph 14.3.3 identifies that three sources of green-house gas emissions will be created during the construction and operation of the project. The emissions generated through the operation of the scheme will be included within Somerset's area-wide transport emissions metrics and will therefore be taken into account in Somerset's transition to net zero. This must be balanced, however, with the benefits that the scheme will deliver, especially in relation to the improvements to connectivity and access to the South West Region, improvement in the resilience of the strategic road network and the promotion of economic growth in the region. In working with National Highways on the development of the detailed design, the County Council will therefore</p>	<p>All projects have a range of benefits and disbenefits on the environment, and it is unusual for a road project to meet all aspirations. Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			wish to explore opportunities for the scheme to contribute to the transport measures described in Somerset's Climate Emergency Strategy.	through issues such as reused of geotechnical materials arising from the scheme, and reduction of vehicle emissions.	
493	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate  The Somerset Councils' Electric Vehicle Charging Strategy describes how the use of conventional fuelled petrol and diesel vehicles must transition to 'Zero Emission' Electric vehicles, in line with national policy, as well as setting out the opportunities and the challenges that this will bring to decarbonise transport across Somerset to help tackle the Climate Emergency. Delivery of the Strategy requires the engagement with and commitment of a wide variety of stakeholders, including National Highways.	National Highways acknowledges the range of views expressed. The provision of electric car charging points is outside of the scope of this scheme.	N/A
494	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate  In relation to the development of public transport, the journey time reliability of commercial bus services between Taunton and Ilminster is affected by the need to route on and off the existing A358. The consultation proposals developed by National Highways will enable direct routing of buses through villages located along the A358 corridor without the need to use the dual carriageway. The County Council will therefore wish to work with the public transport operators to explore opportunities for enhanced provision and with National Highways in the facilitation of modal shift. Added to this, Somerset's Bus Service Improvement Plan (BSIP) drafted in partnership with local operators sets out a radical overhaul of services in the County, the aim being to make bus services greener, more attractive, more affordable, easier to use, as well as faster and more reliable as an integral part of the Somerset's Climate Emergency Strategy by getting more people out of cars and onto public transport.	National Highways acknowledges the range of views expressed relating to the need for the scheme and has carefully considered alternatives to the scheme during the refinement of current design and through the options identification and appraisal process, including alternative modes of transport.  National Highways support actions recommended by Committee on Climate Change on modal shift and managing the demand as these will help reduce the growth in traffic on our network. National Highways is taking actions to integrate net zero into their statutory consultee responses to planning applications from 2022, work with the sub-national transport bodies to agree priorities and actions to support delivery of our net zero strategies by 2022, develop and implement a programme to improve public transport operations on the strategic road network, promotion of walking and cycling, and measures to reduce the need to travel and implement a comprehensive plan to reduce, re-mode and re-time journeys in the third road period.	N/A
495	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate  Section 3 of this response deals with the proposals affecting walkers, cyclists and horse-riders and encourages enhancements that will help to reduce dependency on the car, in particular for short trip journeys between villages. In addition to these measures, the County Council will wish to explore with National Highways the scope of activities that may be feasible to reduce the overall need to travel.	National Highways acknowledges the range of views expressed relating to the need for the scheme and has carefully considered alternatives to the scheme during the refinement of current design and through the options identification and appraisal process, including alternative modes of transport.  The scheme objectives include creating an accessible and integrated network. Facilities and connectivity for walkers, cyclists and horse-riders alongside the route would be retained, and connections between communities either side of the scheme would be maintained. The needs of walkers, cyclists, horse-riders and disabled users have been considered as part of the design development of the scheme, in line with the appropriate design standards. This has included engagement with a range of user groups, including Somerset Council.	N/A
496	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate  In relation to the vulnerability to climate change, paragraph 14.7.5 is noted in as much as the proposed scheme is expected to increase the resilience of transport systems in the region to hazards arising from climate change and that it would improve safety for all road users and provide benefits for the overall resilience of the region. The County Council will wish to work proactively with National Highways through the	National Highways are continuing to engage with Somerset Council in respect of climate change measures.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			detailed design process to ensure that local highway elements in particular are 'futureproofed' to cope with more extremes of weather and climate.		
497	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate</p> <p>It is noted that the carbon assessment of the scheme has only been undertaken at a scheme level. The A358 improvement forms part of a much wider whole-corridor programme to create a more attractive second strategic route from London to the South West as an alternative to the M4/M5 corridor. The A303/A358 route is some 16 miles (and circa 10%) shorter, and the improved journey time should result in a significant proportion of traffic switching to the shorter route resulting in lower emissions from those vehicles due to the reduced distance travelled. We note that a programme-level carbon appraisal is not included and consider that the project level appraisal is likely to significantly over-estimate the carbon emissions related to the scheme by omitting consideration of the strategic function and impact of the project in the wider corridor strategy.</p>	<p>The net-zero ambition is set out within the amendments (July 2019) to the Climate Change Act 2008. The Secretary of State supports delivery of emission reductions through a system of five- year carbon budgets that set a trajectory for reducing greenhouse gas production to 2050. In response to the carbon budgets, the Department for Transport has published The Road to Zero which sets out steps towards cleaner road transport and delivering the Industrial Strategy.</p> <p>National Highways recognises the concern raised about the scheme within the context of concerns about global warming and is aware of the changes which the Climate Change Act 2008 (2050 Target Amendment) Order 2019 introduced on 27 June 2019.</p> <p>National Highways is required by the National Policy Statement for National Networks to assess the effects of the scheme in relation to carbon emissions and climate change, including an assessment of the significance of any increase within the context of the relevant UK carbon budget period. The climate assessment considers impacts over a 60 year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). In all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate. This assessment has also been included within the ES (Document Reference 6.2) that is submitted as part of the DCO application, and outlines the measures taken to avoid and mitigate carbon emissions through the design of the scheme. ES Chapter 14 Climate (Document Reference 6.2) describes an assessment of any likely significant climate factors in accordance with the requirements in the EIA Regulations and guidance within DMRB LA 114 Climate.</p>	N/A
498	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate</p> <p>It is noted at paragraph 14.4.7 that an area of between 200-300 hectares (ha) of forest would be required to sequester the embodied carbon impacts of the proposed scheme over its design life and that an intervention to sequester the carbon impacts of the proposed scheme is not considered feasible and has not formed part of the green- house gas emissions preliminary assessment. It is further noted that a more detailed assessment will be presented within the Environmental Statement. The County Council wishes to understand how the carbon emissions for the scheme will be accounted for and either offset or sequestered.</p>	<p>The ES (Document Reference 6.2) submitted as part of the DCO application, presents an assessment of land use change and identify, assess and integrate measures to further reduce carbon through on or off-site offsetting and sequestration (e.g., through the use of renewable technologies). Additionally, National Highways set out how they will manage the green space for carbon removal, renewable generation, safety and biodiversity in an Environmental Sustainability Strategy which is published every road period and in the five year Delivery Plans. National Highways will plant at least an additional 3 million trees by 2030.</p> <p>The updated assessment is presented as ES Chapter 14 Climate (Document Reference 6.2).</p>	N/A
499	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate</p> <p>Whilst the National Highways' commitment to achieve construction and maintenance 'net zero' emissions by 2040 is welcome, it is noted that this date is well after the A358 project will have been completed. The County Council will therefore wish to engage with National Highways in seeking to reduce green-house gas emissions associated with construction of the dual carriageway by informing the design in the way set out in paragraph 14.8.4 of the Climate chapter:</p>	<p>National Highways is committed to reducing carbon emissions during construction and maintenance before 2040 and has considered carbon throughout the stages of the scheme. ES Chapter 14 Climate (Document Reference 6.2) sets out the mitigation measures proposed to avoid, reduce or remediate impacts during the scheme construction.</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<ul style="list-style-type: none"> <li>• Avoid/prevent – maximise the potential for re-using and/or refurbishing existing assets to reduce the extent of new construction required, and/or explore alternative lower carbon options to deliver the proposed scheme objectives.</li> <li>• Reduce – low carbon and/or reduced resource consumption solutions (including technologies, materials and products) to minimise resource consumption during the construction, operation, and at end of life.</li> <li>• Remediate – measures to further reduce carbon through on or off-site offsetting or sequestration.</li> </ul>		
500	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate</p> <p>It is noted that the assessment states at paragraph 14.9.13 that the “proposed scheme is estimated to contribute approximately 0.004% of the 4th carbon budget. Operation of the proposed scheme is estimated to contribute approximately 0.007% of the 5th carbon budget and 0.014% of the 6th carbon budget”. These figures should not, however, be viewed in isolation and consideration should be given to the overall impact to both local and national carbon emissions. Added to this, in relation to Table 14-18 at paragraph 14.9.12, it is noted that the operation of the scheme will bring an additional 265,000 tCO<sub>2</sub>e from opening to 2037, but it is unclear if this takes into account that extent to which the additional network capacity will result in additional emissions across the wider local highway network in Somerset.</p>	<p>ES Chapter 14 Climate (Document Reference 6.2) has been undertaken in accordance with DMRB LA114 Climate. The assessment has been undertaken using data from the traffic model for the scheme which takes into account the local highway network in Somerset. Details of the methodology and results of the traffic modelling is reported in more detail in the ComMA Report (Document Reference 7.4) submitted within the DCO application.</p> <p>Emissions from construction and operation have been quantified in ES Chapter 14 Climate (Document Reference 6.2) The climate assessment considered impacts over a 60-year period and compared emissions against the UK 4th Carbon Budget (construction emissions) and the 5th and 6th Carbon budgets (for operation). In all cases the emissions calculated demonstrated no impact on the ability of the UK Government to meet these carbon budgets, and no significant effect on climate.</p>	N/A
501	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 14, Climate</p> <p>In relation to construction emissions, it is noted at paragraph 14.9.14 that further information will become available and incorporated in the Environmental Statement that will likely lead to an increase. It would have perhaps been helpful if a more realistic estimate or even over-estimate of construction emissions had been considered within the PEIR.</p>	<p>The emissions identified for the construction period were based on the best information available at PEI Report consultation. These have been updated within the ES Chapter 14 Climate (Document Reference 6.2).</p>	N/A
502	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 15, Assessment of Cumulative Effects</p> <p>With regard to Table 15-8 and the shortlist of projects to be used for the CEA, further consideration should be given to the inclusion of sites for which the submission of planning applications are imminent. In this respect, it is noted that a planning application in respect of the Monkton Heathfield Phase 2 development is expected to be submitted shortly.</p>	<p>The Monkton Heathfield 2 development has been included in ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2).</p>	N/A
503	Somerset County Council		<p>Preliminary Environmental Issues Report (PEIR) Review - Chapter 15, Assessment of Cumulative Effects</p> <p>SCC acknowledge that (Para.15.7.2) that full Cumulative Impacts and Combined Effects Assessments have not been undertaken as the proposed scheme environmental assessments are still being undertaken. However, the methodology as set out in Chapter 15 is an accepted method to assess cumulative impacts of major infrastructure projects. SCC will continue to work collaboratively with the National Highways Project Team as further information and assessments become available, to inform the Environmental Statement.</p>	<p>National Highways acknowledge support for the methodology for the assessment of cumulative effects and continue to engage with Somerset Council throughout the development of the scheme. The assessment has been updated and is presented as ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2).</p>	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
504	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 15, Assessment of Cumulative Effects  SCC acknowledge (Para. 15.7.3) that the CEA will identify any significant cumulative or combined effects which would result in any new or different significant effects to those identified in each environmental factor chapter of the ES. It will also identify any requirement for mitigation measures further to those set out in the individual environmental factor chapters and EMP. SCC consider it important that both potentially significant effects and resulting mitigation activities/actions are considered holistically and that these are clearly investigated with local stakeholders, including SCC, SWT and SSSC.	National Highways acknowledges comments raised in relation to cumulative effects and continue to engage with Somerset Council throughout the development of the scheme. The assessment has been updated and is presented as ES Chapter 15 Assessment of cumulative effects (Document Reference 6.2).	N/A
505	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 16, Summary  Paragraph 16.1.1 – SCC acknowledge that a scheme of this scale and in this location mean that several different aspects of the environment would potentially be affected during both the construction and operational phases (Para. 16.1.2).	National Highways acknowledges the comment made.	N/A
506	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 16, Summary  Paragraph 16.1.5 notes that the ongoing Environmental Impact Assessment (EIA) will consider these effects and assess their significance, taking into account proposed mitigation measures and that this will be presented in the Environmental Statement (ES) prepared to accompany the Development Consent Order (DCO) application. SCC will continue to work positively and collaboratively with National Highways to understand potential impacts and agree necessary mitigation measures through existing Project Governance arrangements.	National Highways welcomes support from Somerset Council and continue to engage through meetings and working groups as detailed in the Statement of Commonality (Document Reference 7.3).	N/A
507	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 17, Abbreviations  No comments or suggested additions.	National Highways acknowledges the comment made.	N/A
508	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 18, Glossary  Table 18-1 A definition of a 'heritage asset' is provided, whereas the term 'heritage resource' is used throughout the PEIR. Either term is accepted.	A description is provided in ES Chapter 17 Glossary (Document Reference 6.2).	N/A
509	Somerset County Council		Preliminary Environmental Issues Report (PEIR) Review - Chapter 18, Glossary  Descriptions of a 'non-designated heritage asset/resource', the 'local heritage list' and a 'local heritage list candidate' are required.		N/A
510	Somerset County Council	Appendix 1 - Scheme Description	Scheme Description  The scheme would provide 8.5 miles (13.6km) of new, rural all-purpose dual carriageway for the A358. The new dual carriageway would connect the existing A303 at Southfields Roundabout near Ilminster and with	National Highways acknowledges reference to the scheme description, the scope of Somerset County Council's review and response provided at statutory consultation.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>junction 25 of the M5 at Taunton. The new dual carriageway would be completed in-line with current trunk road design standards.</p> <p>This report considers a second version of the layout following consultation with the parish councils affected by the scheme. There are no responses to the previous report, sa-6-0081-002-1, due to short timescales. Therefore, the following comments and observations are based on the incoming drawings and the additional information provided.</p>		
511	Somerset County Council	Appendix 1 - Strategic Decisions	<p>Strategic Decisions</p> <p>The A358 Taunton to Southfields Scheme is part of a programme of improvements planned along the A303/A358 corridor aimed at improving connectivity between London, the south-east and the south-west. The A303, alongside the A30, forms part of the strategic road network (SRN) and together with the A358, provides the link between London, the south-east and the south-west.</p> <p>The programme of improvements, as set out in the Government's Road Investment Strategy made a commitment to, "...upgrade all remaining sections of the A303 between the M3 and the A358 to dual carriageway standard, together with creating a dual carriageway link from M5 at Taunton to the A303, as part of a long-term commitment to creating a new Expressway to the South-West".</p> <p>Funding for delivery of the scheme has been confirmed within the second Road Investment Strategy (RIS2), which covers the period between 2020 and 2025 which was published on the 11th March 2020.</p> <p>The announcement of the preferred route alignment (PRA) was made in June 2019:</p> <p><a href="https://highwaysengland.citizenspace.com/he/taunton-to-southfields-duallingscheme/results/a358_taunton-southfields_brochure_final_digital_19.06.19.pdf">https://highwaysengland.citizenspace.com/he/taunton-to-southfields-duallingscheme/results/a358_taunton-southfields_brochure_final_digital_19.06.19.pdf</a></p>	National Highways acknowledges reference to the wider strategic improvements to the A303/A358 corridor, as set out in Somerset County Council's consultation response.	N/A
512	Somerset County Council	Appendix 1 - Scheme objectives	<p>Scheme objectives</p> <p>The project objective is to create a dual carriageway link from the M5 at Taunton to the A303, incorporating upgraded stretches of the existing road into the strategic road network, where appropriate, which would address the traffic issues and long delays currently experienced along the route and the negative impact this has on the southwest economy.</p> <p>The Road Investment Strategy outlines an overall ambition to improve connectivity between the southeast and southwest.</p> <p>In order to deliver this ambition, the following scheme objectives have been set:</p> <ul style="list-style-type: none"> <li>- Support economic growth: facilitate growth in jobs and housing by providing a free-flowing and reliable connection between the southeast and the southwest</li> <li>- Resilience: to improve journey time reliability and resilience, and provide extra capacity to make it easier to manage traffic when incidents occur</li> </ul>	National Highways acknowledges reference to the scheme objectives set out in Somerset County Council's consultation response.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<ul style="list-style-type: none"> <li>- Connectivity: to improve the connectivity of the southwest to the rest of the UK and improve business and growth prospects</li> <li>- Local communities: to reduce community severance and promote opportunities for improving their quality of life</li> <li>- Safety: to improve safety for all, including pedestrians, cyclists and other nonmotorized users</li> <li>- Environment: to avoid unacceptable impacts on the surrounding landscape, natural historic environment while exploring opportunities for enhancement</li> <li>- Capacity: to reduce delays and queues that occur during peak hours and at seasonal times of the year</li> </ul>		
513	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	It is also noted that the horizontal alignment of the carriageway has been altered and the bridge structure is offset to the southwest. This appears to result in a short length of service road for the properties 'Vermont', 'Wayside' and 'The Nook' on the northern side of the mainline cutting. There is some concern about the tie-in of the southern side junction radius of the service road (approx. ch50) due to potential level differences.	The arrangement proposed at statutory consultation was further modified for supplementary consultation and included a revised alignment of Stoke Road and improvement of the tie-in to the service road for the existing properties.	Yes
514	Somerset County Council	Appendix 1 - Design Standards	<p>Design Standards</p> <p>The Technical Note provided by Highways England states that they are currently developing a technical note outlining the stage 3 local roads strategy. This note will be submitted to Somerset County Council as the second submission of the Alignment focus group. At the time of writing this report no additional Technical Note has been provided.</p>	During the course of preliminary design, National Highways has developed a more appropriate approach to local road design standards in conjunction with Somerset Council through a Local Roads Strategy document. This was submitted to Somerset Council and follow up meetings have been held to review and agree the proposals.	Yes
515	Somerset County Council	Appendix 1 - Bath House Farm Link	Details of the Entry Path Radius and deflection will be required to show compliance with CD 116 3.26.	The Entry Path Radius was measured as 54m which complies with CD 116 paragraph 3.26	N/A
516	Somerset County Council	Appendix 1 - Design Standards	<p>Design Standards</p> <p>The design of any scheme shall be in accordance with the relevant national design standards recognised by the highway authority as applicable for the road classification and traffic volumes, etc. Any safety implications associated with design shall be fully considered against the objectives set out in GG119 Road Safety Audit.</p>	National Highways has undertaken the preliminary design of the scheme in accordance with relevant design standards and in discussion with Somerset Council. The preliminary design has also been subject to a Stage 1 Road Safety Audit in accordance with DMRB GG119.	N/A
517	Somerset County Council	Appendix 1 - Design Speed	<p>Design Speed</p> <p>The mainline A358 is proposed to be a dual carriageway. It will be subject to the national speed limit, with a design speed of 120kph in accordance with Figure 1 of TD 9/93. It is proposed that slip roads have a design speed of 70 kph as per Table 4/1 of TD 22/06. Design speeds for local roads would be subject to agreement with the local highway authority.</p>	National Highways acknowledges the comment. Design speeds for local roads have been agreed with Somerset Council as per the Statement of Common Ground with Somerset Council (Document Reference 7.3).	N/A
518	Somerset County Council	Appendix 1 - Traffic Information and Transport Assessment (TA)	<p>Traffic Information and Transport Assessment (TA)</p> <p>The suitability of the proposed layout in respect to envisaged flows and turning movements will need to be established through relevant modelling to prove the layout</p>	National Highways has undertaken operational modelling of all key junctions along the scheme. These show that all junctions will operate within their practical capacity.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			has adequate capacity. The proposals will be assessed not only in terms of effect on vehicles, but also on the wider impact/integration of the development on pedestrians, cyclists, equestrians and passenger transport facilities.		
519	Somerset County Council	Appendix 1 - Design Standards	Design Standards It is also noted from one of the Parish Council responses that the mainline carriageway is to be designed to GD300 Requirements for new and upgraded all-purpose trunk roads (expressways). The design team should clarify the latest design standards being used.	The design of the mainline carriageway is undertaken in accordance with a suite of design standards that form part of the DMRB. GD 300 is one of a number of different standards within DMRB that have been used.	N/A
520	Somerset County Council	Appendix 1 - Bickenhall Lane	180m and 300m radii are proposed along with transitions which would be acceptable.	National Highways acknowledges the comments made.	N/A
521	Somerset County Council	Appendix 1 - Visibility	The envelope of visibility for non-motorised users should comply with the requirements of CD143.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent. If site constraints prevent this in specific locations, a departure from standard may be required in accordance with established processes.	N/A
522	Somerset County Council	Appendix 1 - Visibility	The designer should check all visibility splays in the vertical plane to ensure the views in the horizontal plane are not compromised.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent. If site constraints prevent this in specific locations, a departure from standard may be required in accordance with established processes.	N/A
523	Somerset County Council	Appendix 1 - Village Road	Gradients of 0.17% and 0.79% have been proposed and although they may be in keeping with the existing gradients, ideally a minimum 1% gradient should be provided for drainage purposes. The 3.39%, 4.67% and 1.39% would be acceptable. The sag curve K-values of 30 and 20 would be acceptable as would the crest curve K-values of 100 and 40.	National Highways acknowledges the request for minimum 1% gradients and this can be reviewed for detailed design, subject to successful DCO consent.	N/A
524	Somerset County Council	Appendix 1 - New and existing structures	Clarification is also required about the ownership of all structures, old and new, either affected by the scheme or provided to deliver the scheme.	As a general expectation, National Highways would be responsible for the ownership and maintenance of the new/upgraded A358 and connecting junction slip roads and the assets that form part of this, whilst Somerset Council would be responsible for the ownership and maintenance of the local road network and the assets that form part of this. Further details will be clarified during detail design and National Highways will continue ongoing engagement with Somerset Council regarding ownership and maintenance limits of the highway network and associated assets.	N/A
525	Somerset County Council	Appendix 1 - Drainage	All matters relating to drainage will be covered as part of a separate submission.	National Highways has continued to engage with the Somerset Council drainage team.	N/A
526	Somerset County Council	Appendix 1 - Village Link Road	A Road Restraint Risk Assessment should also be provided given the proximity of the old A358 with the new mainline A358 dual carriageway.	National Highways acknowledges this comment.	N/A
527	Somerset County Council	Appendix 1 - Visibility	No visibility splays have been plotted at this time. Drawings will be required indicating all visibility splays for all users as this will help to determine the extents of the red line plan.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and the scheme boundary accommodates	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				these. Details will be refined and finalised during detailed design, subject to successful DCO consent.	
528	Somerset County Council	Appendix 1 - Ash Road	Adverse camber should be eliminated.	The design was changed at supplementary consultation, and it is no longer proposed for Ash Road to tie into the southern roundabout at Mattock's Tree Green junction.	Yes
529	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	It is also noted that there are a number of horizontal radii proposed. Ideally the minimum radius should be 90m.	The alignment of Stoke Road was further modified for supplementary consultation and all proposed radii in the horizontal alignment are greater than 90m.	Yes
530	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	It is also noted that there is a section near Thornwater Farm that has been highlighted and within the red line boundary. Please provide further details of the proposed works in this area.	A footway is proposed within the existing verge at this location to provide an alternative route to footpaths that would be stopped up.	N/A
531	Somerset County Council	Appendix 1 - Ash Road	Gradients, sag curves and crest curves are considered acceptable.	The design was changed at supplementary consultation, and it is no longer proposed for Ash Road to tie into the southern roundabout at Mattock's Tree Green junction.	Yes
532	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	Please confirm the design speed. The assumption is 50/60kph which would be acceptable.	A proposed design speed of 60kph has been assumed.	N/A
533	Somerset County Council	Appendix 1 - Affected Local Roads	Affected Local Roads Existing local roads as identified by the design team that are affected by the scheme and associated Stage 2 proposals are listed in the following table.	National Highways acknowledges the comment which included a large table of existing roads affected by the scheme, but that table is not reproduced here.	N/A
534	Somerset County Council	Appendix 1 - Carriageway Separation	It would appear that there are sections of the proposed new A358 and associated earthworks that will impact on the old A358. Consideration will need to be given to the provision of road restraint systems and fencing as they could also be a problem for the pavement foundation.	National Highways has taken into account the provision of road restraint systems and fencing.	N/A
535	Somerset County Council	Appendix 1 - Village Link Road	It is noted that this section of the of the A358 will be retained and tie into Village Road. The existing A358 is a wide single carriageway with 2 lanes north and a single lane south separated with a double white line. The overall width should be reduced but include dedicated cycle lanes (as identified on drawing HE551508-ARP-ENM-DR-CH-000002 Rev P01.01) which will help with separation between the old A358 and the new mainline carriageway.	The intention is to re-use parts of the existing A358 carriageway that will become redundant as cycle lanes, within existing carriageway widths, between the A378 and the Village Road link (north).	N/A
536	Somerset County Council	Appendix 1 - New and existing structures	It is noted that there are a number of proposed new structures throughout the scheme that are not directly related to the dualling of the A358. It is recommended that the Somerset County Council structures team are consulted at an early stage to identify all existing structures that might be affected as well as those new ones that are proposed.	National Highways has liaised with Somerset Council to identify existing and proposed structures required as part of the scheme	N/A
537	Somerset County Council	Appendix 1 - Road signs and markings	It is also recommended that the Somerset County Council traffic management team are consulted as the proposals may have an impact on existing weight and height restrictions that might be in effect.	National Highways acknowledges this comment.  Existing signage to remain, be removed or redesigned have been identified as part of the traffic sign strategy. No new weight or height restrictions have been added or identified at this stage. An existing weight restriction on the A378 Langport Road has been identified and included in the current signage strategy and shown on proposed Advance Direction Signs at Mattock's Tree Green junction. The appropriateness of the weight restriction positioning on the route will be further investigated at detailed design	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
538	Somerset County Council	Appendix 1 - Bickenhall Lane	In a further note from Beercrocombe Parish Council on June 23rd 2021 they note a specific design issue with the Bickenhall Lane and that it will funnel traffic in to the centre of Hatch Beauchamp increasing the risk of accidents within the village.  Whilst Bickenhall Lane itself is quite narrow, Village Road is of a much higher standard. A check on the collision database did not reveal any collisions in the area. There was one collision at the junction of Griffin Lane to the north, but this was due to adverse weather conditions.  It is recommended that traffic calming measures are provided within the village if required to overcome those concerns and that the Minor Improvements team are consulted to see if there are any proposals independent of the A358 dualling project.	Following supplementary consultation, the design was changed, and it is no longer proposed for Bickenhall Lane and the overbridge over the A358 to be open to public vehicular traffic	Yes
539	Somerset County Council	Appendix 1 - Greenway Lane	The section of carriageway on the northern side should be grubbed out as it no longer serves any purpose.	The section of Greenway Lane to the north of the new A358 is required to be maintained as a public highway as there is existing statutory undertakers utilities along this road.	No
540	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	Details will be required for the width of the structure. It is likely that two traffic will be required alongside suitable provision for non-motorised users  identified on drawing HE551508-ARP-ENM-DR-CH-00001 Rev P02.	The minimum carriageway width proposed for the bridge is 6m with a minimum verge width of 1.5m. The carriageway would continue to be shared space for all users as per the existing situation. The minimum verge width would be retained on the structure with parapets suitable for horse-riders.	N/A
541	Somerset County Council	Appendix 1 - Ash Road	There are some concerns over the tie-in of the northern side junction radius to the 'old' Ash Road (approx. ch.175) due to the potential level difference.	The design was changed at supplementary consultation, and it is no longer proposed for Ash Road to tie into the southern roundabout at Mattock's Tree Green junction	Yes
542	Somerset County Council	Appendix 1 - Bath House Farm Link	However, it would appear from the drawing that the original proposal for a link to West Hatch Lane is still shown and there are no details for the existing A358. Please confirm if the link is still to be provided and what works will be carried out to the old A358 at this location.	West Hatch Lane has been extended and now provides a connecting link to Huish Woods Lane, which in turn provides a connection through to Mattock's Tree Green junction via the Scout Camp link. The alignment of the West Hatch Lane extension reuses part of the old A358 carriageway.	Yes
543	Somerset County Council	Appendix 1 - Ash Road	Please confirm the design speed. The road is derestricted although speeds are likely to be much lower due to the characteristics of the existing road. The assumption is 50/60kph which would be acceptable.	The design was changed at supplementary consultation, and it is no longer proposed for Ash Road to tie into the southern roundabout at Mattock's Tree Green junction. The proposed design now includes a link between Ash Road and the Scout Camp link and the proposed design speed for this is 60kph, which is considered in-keeping with the existing rural surroundings.	Yes
544	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	Adverse camber should be eliminated.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent.	N/A
545	Somerset County Council	Appendix 1 - Route resilience	Consideration should be given to diversionary routes in the event of the new A358 dual carriageway being closed.	The increased capacity provided by the scheme would mean that the A358 could operate with one lane closed in the event of an accident or breakdown, thus reducing the need for local diversions or closures, as would be the case with the existing single carriageway route. Any significant and planned road closures requiring strategic diversions would be planned in advance and agreed with Somerset Council as the local highway authority and would utilise other A roads on both the strategic and local road network.	N/A
546	Somerset County Council	Appendix 1 - Ash Road	Details of the Entry Path Radius and deflection will be required to show compliance with CD 116 3.26.	The design was changed at supplementary consultation, and it is no longer proposed for Ash Road to tie into the southern roundabout at Mattock's Tree Green junction	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
547	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction (A358 Ilminster Road)	The current layout for the western arm of the northern roundabout appears to show it tie back into the dual carriageway of the existing A358. Further discussions will be required with regards to the retention of the dual carriageway as a result of these proposals.	National Highways agree with the comment and further discussions will be held with Somerset Council in regard to this layout and the proposed repurposing of the existing A358 eastbound dual carriageway (south of Henlade) into a cycleway.	Yes
548	Somerset County Council	Appendix 1 - Staple Fitzpaine Road	It is noted from the revised drawings that the overbridge is to be shifted away from a number of properties and that this has been welcomed by the Beercrocombe Parish Council 23rd June comments. Further detail will be required to show how the remaining section joins the realigned road.	National Highways acknowledges the comment made.	N/A
549	Somerset County Council	Appendix 1 - Non Motorised User Provision	Footways, cycleways and equestrian infrastructure should comply with CD 143 Designing for Walking, Cycling and Horse-riding.	National Highways acknowledges this comment, and DMRB CD 195 Designing for cycle traffic has also been considered in respect of the design of this infrastructure.	N/A
550	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	It is noted that there are a number of proposed maintenance accesses to attenuation basins served from the existing A358 dual carriageway section.  Further discussions are required regarding the future use of this section of dual carriageway and whether only one carriageway is retained limiting the future maintenance liability for the county.	The scheme would retain this section of the existing A358 to maintain connections to local villages such as Henlade and Thornfalcon, and can be accessed via the existing M5 junction 25 and Nexus 25 junction, as well as the proposed Mattock's Tree Green junction.  National Highways has worked through details in the Technical Working Groups to reach an agreed position with Somerset Council about how the existing A358 would be retained as a local road including the reallocation of the current eastbound carriageway to cycle travel.	Yes
551	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction Overbridge	Details of the Entry Path Radius and deflection will be required to show compliance with CD 116 3.26.	Entry Path Radius was measured as 62m (Northbound) and 90m (Southbound) which comply with CD 116 paragraph 3.26	N/A
552	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction (A358 Ilminster Road)	On the A378 Langport Link gradients of 3.01% and Sag Curves with K-value of 20 are acceptable but the sag curve K-value of 4 and crest curve K-value of 3 are too small to be considered acceptable.	The K values of 4 (sag) & 3 (crest) replicates the existing carriageway levels of the A358 - these have been replaced with a gradient on the approach to the roundabout.	Yes
553	Somerset County Council	Appendix 1 - Existing services	It is unclear from the submitted drawings whether the proposed works impact upon any existing services and utility apparatus. If any services are to be diverted, lowered or protected as a result of the works the works themselves will have to meet the requirements of both the relevant statutory undertaker and the highway authority.	While National Highways acknowledges this comment, no detailed information regarding utilities was available at statutory consultation, National Highways have compiled utilities information and spoken to statutory undertakers regarding the impact of the scheme and proposed diversions are shown on the Works Plans (Document Reference 2.3).	N/A
554	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000001 P02	A suggested alternative Page 37	The suggested alternative for footpath T 22/7 is included in the application scheme.	Yes
555	Somerset County Council	Appendix 1 - Environmental Constraints	No details have been provided at this time about any environmental constraints that may affect the works to both the dualling of the A358 and the surrounding highway network.	Drawings were made available as part of the Preliminary Environmental Information (PEI) Report for statutory consultation. Environmental Features are shown on the DCO Application Plans (Document Reference 2.7 - 2.11).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
556	Somerset County Council	Appendix 1 - Connection to April Cottage	40m and 350m radii are proposed which would be acceptable.	National Highways welcomes support for the proposed geometry.	N/A
557	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	Gradients, sag curves and crest curves are considered acceptable provided it affords at least the same as the existing provision.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent.	N/A
558	Somerset County Council	Appendix 1 - Village Link Road	Removal of the adverse camber on the curves should be applied.	National Highways agrees with this statement and the design as presented at statutory consultation includes the appropriate elimination of adverse camber in compliance with CD 109 table 2.10	N/A
559	Somerset County Council	Appendix 1 - Greenway Lane	If Greenway Lane is to be stopped up, a suitable turning head will be required to the southern side to cater for refuse vehicles. This may require additional land take.	In the proposed design for supplementary consultation, a suitably sized turning head to cater for refuse vehicles was included at the end of Greenway Lane to the south of the new A358.	Yes
560	Somerset County Council	Appendix 1 - Bath House Farm Link	Huish Woods Lane is a private road not maintained by the local highway authority. It is noted that a new road will be constructed providing access to the Progressive School and Nightingale Farm Units along with a number of businesses close by and the Huish Woods Scout Camp from the new southern roundabout which is likely to be an acceptable alternative.	National Highways acknowledges and welcomes support for the scheme.	N/A
561	Somerset County Council	Appendix 1 - Bath House Farm Link	Removal of the adverse camber on the 127m radius curve should be applied.	Superelevation will be applied at the next design stage to a maximum of 2.5% to remove adverse camber for local roads with a design speed of lower than 60kph.	N/A
562	Somerset County Council	Appendix 1 - Bath House Farm Link	Please confirm the design speed. The road is assumed to be derestricted although speeds are likely to be much lower due to the characteristics of the road and surrounding area. The assumption is 50/60kph which would be acceptable.	A proposed design speed of 60kph has been assumed for the new link to Scout Camp/Somerset Progressive School.	N/A
563	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction (A358 Ilminster Road)	Details of the Entry Path Radius and deflection will be required to show compliance with CD 116 3.26.	Entry Path Radius measured as 72m which complies with CD 116 paragraph 3.26	N/A
564	Somerset County Council	Appendix 1 - Village Link Road	Gradients of 6.26%, 2.14%, 1.07% and 1.60% would be acceptable. The sag curve K-values of 20 would be acceptable as would the crest curve K-value of 30.	National Highways acknowledges the comment on acceptable gradients and K-values.	N/A
565	Somerset County Council	Appendix 1 - West Hatch Lane	The last property along this section is Vincents Farm. A turning head should be provided just beyond the Farm and the remaining section of carriageway grubbed out and returned to rural land.	Following statutory consultation, National Highways changed the scheme design in this location and an extension to West Hatch Lane is proposed which connects Mattock's Tree Green junction via Huish Woods Lane and the Scout Camp link; a turning head is therefore not necessary.	Yes
566	Somerset County Council	Appendix 1 - West Hatch Lane	West Hatch Lane to the south east is to be stopped up which may have an adverse effect on local traffic requiring access to West Hatch and the surrounding settlements such as Thurlbear and the primary school. Alternative routes include Griffin Lane, but this lane is narrow (approximately 3m) and is used frequently by pedestrians, cyclists and equestrians as a Quiet Lane. Further information is required regarding alternative routes for those settlements in and around West Hatch.	It is expected that local traffic in these areas would use the new Mattock's Tree Green junction to join the A358, A378 or access Hatch Beauchamp. Alternatively, they could travel further south to the proposed Village Road overbridge, to access Hatch Beauchamp. Further details on the outputs of the traffic modelling on the local road network is provided in the CoMMA Report (Document Reference 7.4).	N/A
567	Somerset County Council	Appendix 1 - Griffin Lane - Underbridge	There are no observations at this time. However, see 3.9 above.	National Highways acknowledges these comments.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
568	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction (A358 Ilminster Road)	It is noted from the revised drawings that the existing signalised junction will now be removed altogether. This will require further discussion and information regarding modelling and traffic flow data to determine the most appropriate junction type at this location. There are concerns about the proximity of the new simple priority junction to the northern roundabout as traffic heading towards Hatch Beauchamp will have to turn right across oncoming traffic immediately after leaving the roundabout.	Following statutory consultation in 2021, National Highways reviewed the configuration of the Mattock's Tree Green junction and proposed an alternative arrangement for supplementary consultation 2022 in which the Village Road link (north) was connected directly into the northern roundabout at Mattock's Tree Green junction. This arrangement eliminates the separate junction with A378 and creates a more direct link to Hatch Beauchamp. This arrangement would improve safety by eliminating several conflicting traffic movements and simplify signposting. A signalized Pegasus type crossing would be provided to provide safer crossing opportunities to walkers, cyclists and horse-riders across the A378.	Yes
569	Somerset County Council	Appendix 1 - Bickenhall Lane	Please confirm the design speed. The road is assumed to be derestricted although speeds are likely to be much lower due to the characteristics of the road and surrounding area. The assumption is 50/60kph which would be acceptable.	Bickenhall Lane is no longer proposed to be open to public vehicular traffic.	N/A
570	Somerset County Council	Appendix 1 - Stewley Lane	Gradients of 0.70%, 0.50% and 0.79% have been proposed and although they may be in keeping with the existing topography, ideally a minimum 1% gradient should be provided for drainage purposes. The 4.00%, 3.50%, 1.67%, 2.30%, 1.07%, 1.50%, 5.80%, 1.85%, 1.53% and 2.36% gradients would be acceptable. The sag curve K-values of 20 and 45 would be acceptable as would the crest curve K-values of 17 and 30.	National Highways acknowledges this and minimum 1% gradients can be reviewed for detailed design, subject to successful DCO consent.	N/A
571	Somerset County Council	Appendix 1 - Bickenhall Lane	Superelevation of 7.0% and 3.5% has been shown as proposed for the 180m and 360m radius curves respectively. It is considered that only the removal of the adverse camber need be applied.	Following supplementary consultation, the design was changed, and it is no longer proposed for Bickenhall Lane and the overbridge over the A358 to be open to public vehicular traffic	Yes
572	Somerset County Council	Appendix 1 - Incoming Documents	Incoming Documents The following drawings have been provided for consideration: Stoke Road – Plan and Profile HSR-OB_2450-DR-CH-000001 P01.01 Mattocks Tree Green [Sheet 1 of 3] HSR-JN_MTG_Z-DR-CH-000001 P01.01 Mattocks Tree Green [Sheet 2 of 3] HSR-JN_MTG_Z-DR-CH-000002 P01.01 Mattocks Tree Green [Sheet 3 of 3] HSR-JN_MTG_Z-DR-CH-000003 P01.01 Village Road Link HSR-LK_MTG_Z-DR-CH-000001 P01.01 Bickenhall Lane Link HSR-LN_BICKEN_Z-DR-CH-000006 P01.01 Village Road [Sheet 1 of 2] HSR-SR_BEAU_Z-DR-CH-000001 P01.01 Village Road [Sheet 2 of 2] HSR-SR_BEAU_Z-DR-CH-000002 P01.01 Stewley Link [Sheet 1] HSR-LK_STEWLEY_Z-DR-CH-000001 P01.01 Stewley Link [Sheet 2] HSR-LK_STEWLEY_Z-DR-CH-000002 P01.01 Ashill Road [Sheet 1] HSR-SR_ASHILL_Z-DR-CH-000001 P01.01 Ashill Road [Sheet 2] HSR-SR_ASHILL_Z-DR-CH-000002 P01.01 Broadway Street Link HSR-SR_BRDWAY_Z-CH-000001 P01.01 Broadway Street Link HSR-SR_BRDWAY_Z-CH-000002 P01.01	National Highways acknowledges reference to the incoming drawings used to inform the consultation response.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			<p>General Arrangement Sheet 1 of 9 HGN-DR-CH-000001 P03</p> <p>General Arrangement Sheet 2 of 9 HGN-DR-CH-000002 P03</p> <p>General Arrangement Sheet 3 of 9 HGN-DR-CH-000003 P03</p> <p>General Arrangement Sheet 4 of 9 HGN-DR-CH-000004 P03</p> <p>General Arrangement Sheet 5 of 9 HGN-DR-CH-000005 P03</p> <p>General Arrangement Sheet 6 of 9 HGN-DR-CH-000006 P03</p> <p>General Arrangement Sheet 7 of 9 HGN-DR-CH-000007 P03</p> <p>General Arrangement Sheet 8 of 9 HGN-DR-CH-000008 P03</p> <p>General Arrangement Sheet 9 of 9 HGN-DR-CH-000009 P03</p> <p>WCHAR Strategy [Sheet 1 of 4] ENM-DR-CH-000001 P02</p> <p>WCHAR Strategy [Sheet 2 of 4] ENM-DR-CH-000002 P02</p> <p>WCHAR Strategy [Sheet 3 of 4] ENM-DR-CH-000003 P02</p> <p>WCHAR Strategy [Sheet 4 of 4] ENM-DR-CH-000004 P02</p> <p>The following additional information has also been provided for consideration:</p> <ul style="list-style-type: none"> <li>- Parish Council Proposals - 14th June 2021</li> <li>- Beercrocombe Parish Council Points Arising - 23rd June 2021</li> <li>- A358 Taunton to Southfields - DF2 Update - 25th June 2021</li> <li>- Community Forum Notes - CLF1 - 11th May 2020 - 5.30pm</li> <li>- Community Forum Notes - CLF3 - 12th May 2021 - 5.30pm</li> <li>- Community Forum Notes - CLF4 - 12th May 2021 - 7pm</li> <li>- Community Forum Notes - CLF5 - 13th May 2021 - 12.30pm</li> </ul>		
573	Somerset County Council	Appendix 1 - Bickenhall Lane	Provision of this route is likely to ease traffic flow on the surrounding network and provide an alternative route between West Hatch and Hatch Beauchamp easing concerns about the use of Griffin Lane.	The scheme design has been amended following the feedback received at statutory consultation. Bickenhall Lane overbridge will now be closed to the general public travelling by motorised vehicles but will remain open for local landholders and non-motorised users. While the impact on traffic through Hatch Beauchamp is forecast to have no notable impact even with Bickenhall Lane overbridge open to motorised vehicles, this design change will further reduce the potential for additional traffic passing through Hatch Beauchamp as a result of the scheme.	Yes
574	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction (A358 Ilminster Road)	It is noted that the revised eastern arm of the existing signalised junction only ties into the northern side of the existing dual carriageway. Further detail is required regarding the southern carriageway as it is anticipated that it will be grubbed out.	Following statutory consultation in 2021, National Highways reviewed the configuration of the Mattock's Tree Green junction and proposed an alternative arrangement for supplementary consultation 2022 in which the Village Road link (north) was connected directly into the northern roundabout at Mattock's Tree Green junction. This arrangement eliminates the separate junction with the A378 and creates a more direct link to Hatch Beauchamp. This arrangement would improve safety by eliminating several conflicting traffic movements and simplify signposting. A signalized Pegasus type crossing would be provided to provide safer crossing opportunities to walkers, cyclists and horse-riders across the A378.	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
575	Somerset County Council	Appendix 1 - Bickenhall Lane	In designing the overbridge, consideration should be given to its use by cyclists and horse-riders as well as vehicles.	Following statutory consultation, the design was amended for supplementary consultation, and it is no longer proposed for Bickenhall Lane and the overbridge over the A358 to be open to public vehicular traffic	Yes
576	Somerset County Council	Appendix 1 - Road signs and markings	No details have been provided at this time regarding road markings on the old alignment or road signs along the route. A review should be undertaken to identify those signs that are redundant and can be removed as well as those signs required to redirect traffic to local destinations.	A sign strategy has been developed and this has been provided to Somerset Council and agreed for the current stage of design. Further detail will be included as part of future design stages, subject to successful DCO consent.	N/A
577	Somerset County Council	Appendix 1 - Staple Fitzpaine Road	Please confirm the design speed. The road is assumed to be derestricted although speeds are likely to be much lower due to the characteristics of the road and surrounding area. The assumption is 50/60kph which would be acceptable.	National Highways agrees Staple Fitzpaine Road should be derestricted to match the existing roads but with the nature of the proposed alignment and carriageway width the speeds should be much lower. It has been designed to a design speed of 60kph.	N/A
578	Somerset County Council	Appendix 1 - Connection to April Cottage	A gradient of 0.5% has been proposed at the give way line with Ashill Road, and although that may be in keeping with the existing profile, ideally a minimum 1% gradient should be provided for drainage purposes. The gradient of 1.30% would be acceptable. The sag curve k-value of 33 would be acceptable.	National Highways acknowledges this and minimum 1% gradients can be reviewed for detailed design, subject to successful DCO consent.	N/A
579	Somerset County Council	Appendix 1 - Capland Lane and Village Road	Gradients of 3.0% and 1.2% at the give way with Village Road would be acceptable. The sag curve value of 10 would be acceptable.	National Highways acknowledges the values requested.	N/A
580	Somerset County Council	Appendix 1 - Sunny Underpass	It is noted that an underpass is to be provided at Ch10900. No geometric details have been provided at this time. Please provide further details to include widths and head heights.	Dimensions to match existing: height: 3.1m, width 3.4m. Extending the proposed users to include cyclists and horse-riders as well as walkers will be reviewed at detailed design stage, subject to successful DCO consent.	N/A
581	Somerset County Council	Appendix 1 - Village Road	Please confirm the design speed. The road is assumed to be derestricted and the assumption is 100kph although speeds are likely to be lower due to the characteristics of the road between ch.600 and ch.1290 where 50/60kph may be acceptable.	A proposed design speed of 60kph has been assumed for Village Road.	N/A
582	Somerset County Council	Appendix 1 - Broadway Street and Jordans Farm Junction (Cad Road)	Gradients of 0.50% and 0.77% have been proposed and although they may be in keeping with the existing topography, ideally a minimum 1% gradient should be provided for drainage purposes. The 3.00% gradient would be acceptable. The sag curve K-values of 30 would be acceptable as would the crest curve K-values of 30.	National Highways acknowledges this and minimum 1% gradients can be reviewed for detailed design, subject to successful DCO consent.	N/A
583	Somerset County Council	Appendix 1 - Village Road	Removal of the adverse camber on the 90m curves should be applied.	National Highways agrees with the comment, and the design as presented at statutory consultation included the appropriate elimination of adverse camber in compliance with CD 109 table 2.10	N/A
584	Somerset County Council	Appendix 1 - Village Road	The old A358 appears to be quite close to the new alignment between Ch9000 and Ch9300. Drivers who see oncoming headlights during the hours of darkness may become confused leading to night-time collisions at this location. There is also an increased risk of errant vehicles from one carriageway reaching another increasing the potential for head-to-head collisions. Further detail is required for this section showing the separation between the two carriageways. It is recommended that any Road Restraint Risk Assessments associated with the scheme are provided for consideration.	National Highways agrees with the comment, and provision of road restraint system and/or screening will be reviewed for detailed design stage, subject to successful DCO consent.	N/A
585	Somerset County Council	Appendix 1 - Capland Lane and Village Road	Please confirm the design speed. The road is assumed to be derestricted although speeds are likely to be much lower due to the characteristics of the road and surrounding area. The assumption is 50/60kph which would be acceptable.	National Highways agrees Capland Lane and Village Road are to be derestricted to match the existing roads, however this road terminates not too far from Village road and mainly serves to access a small number of properties. It has been designed to a design speed of 60kph.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
586	Somerset County Council	Appendix 1 - Staple Fitzpaine Road	A 520m radius is proposed which would be acceptable.	National Highways acknowledges this comment.	N/A
587	Somerset County Council	Appendix 1 - Bath House Farm Link	Gradients of 6%, 2.58% and 2% at the roundabout entry would be acceptable.		N/A
588	Somerset County Council	Appendix 1 - High Bridge Underbridge	There are no observations at this time.		N/A
589	Somerset County Council	Appendix 1 - Folly Drove	There are no observations at this time.		N/A
590	Somerset County Council	Appendix 1 - Neroche Farm Road	Road Restraint Risk Assessments should be carried out and consideration given to the proximity of the old A358 with the new mainline, particularly during the hours of darkness where oncoming headlights could be confusing to all drivers.	National highways acknowledge this and screening (barrier and/or hedging) will also be considered at detailed design stage, subject to successful DCO consent.	N/A
591	Somerset County Council	Appendix 1 - Wood Road	There are no observations at this time.	National Highways acknowledges this comment.	N/A
592	Somerset County Council	Appendix 1 - Stewley Lane	Please confirm the design speed. The road is assumed to be derestricted although speeds are likely to be much lower due to the characteristics of the road and surrounding area. The assumption is 50/60kph which would be acceptable.	National Highways agrees Stewley Lane is to be derestricted to match the existing roads but with the nature of the proposed alignment and carriageway width the speeds should be much lower. It has been designed to a design speed of 60kph.	N/A
593	Somerset County Council	Appendix 1 - Capland Lane and Village Road	A 44m radius is proposed which would be acceptable.	National Highways acknowledges the comment.	N/A
594	Somerset County Council	Appendix 1 - Staple Fitzpaine Road	Gradients of 1.75%, 2.00% and 2.5% at the give way with Village Road would be acceptable. The sag curve K-value of 21 would be acceptable as would the crest curve K-value of 10 provided suitable visibility to the give way line is provided.	National Highways acknowledges the comment around visibility at the give way junction.	N/A
595	Somerset County Council	Appendix 1 - Stewley Lane	Superelevation of 7.0% has been shown as proposed for the 90m, 180m and 255m radius curves, and 5.0% for the 360m radius curves. It is considered that only the removal of the adverse camber need be applied.	For highways with a design speed lower than 60kph superelevation or camber will be applied to a maximum of 2.5%. For design speeds greater than 60kph this will be as per DMRB CD109.	N/A
596	Somerset County Council	Appendix 1 - Radigan Lane	Radigan Lane is identified in the table of the Technical Note as a road that will be stopped up. Radigan Lane joins Stewley Lane in the centre of the hamlet known as Stewley. No details have been provided at this time why Radigan Lane might be stopped up. Further information is required.	This was an error. Radigan Lane does not need stopping up.	N/A
597	Somerset County Council	Appendix 1 - Broadway Street and Jordans Farm Junction (Cad Road)	It is noted that some works will be required to the access road leading to Jordans Farm. It is assumed that this section will be a private track and not dedicated to the highway authority for future maintenance.	National Highways understand the reference to Jordans Farm to be in relation to Jordans Courtyard / Monks Yard which is accessed from the Old A358 at Horton Cross. The connecting link between the Old A358 and Broadway Street is proposed to be a combined accommodation access track and restricted byway.	N/A
598	Somerset County Council	Appendix 1 - Park Barn Lane	Suitable and sufficient turning heads will be required on both sides of the carriageway to accommodate service vehicles and delivery vehicles. This may require additional land take.	A turning head is now provided on Park Barn Lane to the south of the A358. To the north of the A358, the alignment of Stewley Link has been brought closer to the A358 and a turning head on Park Barn Lane is not necessary.	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
599	Somerset County Council	Appendix 1 - Ashill Road - Rapps Road Link	There is an existing 40mph speed limit at the tie-ins, although a 50/60kph design speed could be acceptable.	National Highways have designed this road to 60kph design speed. The intention is to extend the 40mph speed limit from the west to Rapps Road at the east, where it would then return to national speed limit.	N/A
600	Somerset County Council	Appendix 1 - Broadway Street and Jordans Farm Junction (Cad Road)	90m and 255m radii are proposed along with transitions which would be acceptable. Forward visibility splays have been shown around the bends, but no details have been provided to assess acceptability.	Verge widening has been proposed to allow for a Forward Visibility of 90m which is Desirable Minimum for a design speed of 60kph, in accordance with CD 109 Table 2.10	N/A
601	Somerset County Council	Appendix 1 - Visibility	A plan should be produced indicating infrastructure and associated land which is the responsibility of Highway England and infrastructure and associated land that will be maintained by Somerset County Council	The Classification of Roads Plans (Document Reference 2.6c) provide details of the proposed roads and ownership between National Highways and Somerset Council.	N/A
602	Somerset County Council	Appendix 1 - Ashill Road - Rapps Road Link	Superelevation of 7.0% has been shown as proposed for the 90m, 180m and 255m radius curves, and 5.0% for the 360m radius curves. It is considered that only the removal of the adverse camber need be applied.	For highways with a design speed lower than 60kph superelevation or camber will be applied to a maximum of 2.5%. For design speeds greater than 60kph this will be as per DMRB CD109.	N/A
603	Somerset County Council	Appendix 1 - Connection to April Cottage	There is an existing 40mph speed limit at the tie-ins, although a 50/60kph design speed could be acceptable.	National Highways propose a design speed of 50kph for this section of road as it only serves two properties.	N/A
604	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	5.4.3 There are a number of applications to modify the Definitive Map in the Rapps area, as follows:  510M: Addition of restricted byway at Copse Lane  511M: Upgrade footpath CH 1/23 to restricted byway  841M: Add a restricted byway over part of Merryfield Lane  849M: Add a restricted byway from Thickthorn Cross to Rapps Farm  The Council is under a duty to investigate such applications and determine them on the evidence submitted and found during the investigation. The outcome does not always align to what the applicant asserts.	National Highways acknowledges the comments made.	N/A
605	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	511M has been investigated and refused. 510M is awaiting referral to the Planning Inspectorate following objections to an order made to add a public footpath over Copse Lane. It is envisaged that the opposed order will be referred to PINS in 2022 for a decision. The timing of this referral and the DCO application may have a bearing on how PINS deal with the opposed modification order. Applications 841M and 849M await investigation. Please note that 849M is parallel to footpath CH 1/21		N/A
606	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-	3 of the 4 applications detailed above also present opportunities to help mitigate the impact of the proposed development. 510M and 511M could be provided as bridleway, thereby providing an NMU link which in places is more direct and more off road than would otherwise be the case.  841M has the potential to provide an arterial link for NMUs to and from Ilton. Ilton is currently poorly served has severance/deterrent issues to the south and the west in the form of the A303 and A358. The addition	510M: more than half the length of Copse Lane is outside the DCO application boundary and adoption cannot be delivered as part of the scheme. The status of Merryfield Lane would not be affected by the scheme.	No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		ML_A358_Z-DR-CH-000004 P02	of the route of 841M as a bridleway through the DCO process would enable Ilton residents to access an off-road network of paths and quiet lanes which are currently very difficult to reach and would take them off Cad Road and Rapps Road which would be the default alternative. If delivered through the DCO as a bridleway, application 841M will likely persist as restricted byway rights are alleged to exist. It is acknowledged that geographically 841M may appear too far from the development, however the benefit for Ilton residents that have been impacted by increasing traffic flows on both the A358 and A303 will be significant.		
607	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	Again, the Sunny underpass is proposed for walkers, but would equally benefit from being available as a bridleway with the potential for a bridleway link east and south to Ashill, thereby providing better mitigation for the loss of any northern footpath from Ashill with the stopping up of CH 1/2 and CH 1/3, and also providing mitigation for horse riders and cyclists with the stopping up of Park Barn Lane. It is proposed that the underpass link to the Kenny link road, the link to footpath CH 1/1, and CH 1/1 to the south of the dual carriageway are designated as bridleway. Below also features an amended alternative for CH 1/1 to the north of the Kenny link road.	Sunnyside underpass could be used by walkers, cyclists and horse-riders including carriage drivers. The public right of way through the underpass from Ashill Road to Stewley link would be a restricted byway, including partial reclassification of footpath CH 1/1 on the southern side of the scheme. CH 1/1 on the northern side would be diverted to run alongside the field boundary to reduce road walking on Stewley link.	N/A
608	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P02	Extension of the point made in 5.1.5 above to repurpose the full extent of the existing dual carriageway (Page 39) Provision for NMUs at the junction with the A378 Langport Road will be essential.	A Pegasus crossing at the A378 Langport Road would cater for all users on the restricted byway that would run along the redundant A358 carriageway.	N/A
609	Somerset County Council	Appendix 1 - Ashill Road - Rapps Road Link	A gradient of 0.6% has been proposed and although that may be in keeping with the existing profile, ideally a minimum 1% gradient should be provided for drainage purposes. The 2.50%, 1.40%, 2.00%, 6.00% and 1.05% would be acceptable. The sag curve K-values of 30, 13, 20 and 25 would be acceptable as would the crest curve K-values of 17 and 65.	National Highways acknowledges this and minimum 1% gradients can be reviewed for detailed design, subject to successful DCO consent.	N/A
610	Somerset County Council	Appendix 1 - Bickenhall Lane	It is noted that the mainline construction will result in the loss of a Waste Transfer Station near the junction of Bickenhall Lane to the east. Please confirm what provision will be made to replace this facility.	The loss of the Bickenhall Lane Waste Transfer Station is unavoidable due to the widening of the A358 to the east of existing and the stopping up of Bickenhall Lane with the A358. National Highways is continuing to liaise with Somerset Council regarding future arrangements.	N/A
611	Somerset County Council	Appendix 1 - Broadway Street and Jordans Farm Junction (Cad Road)	Please confirm the design speed. The road is assumed to be derestricted although speeds are likely to be much lower due to the characteristics of the road and surrounding area. The assumption is 50/60kph which would be acceptable.	National Highways agree the road is to be derestricted to match the existing roads but with the nature of the proposed alignment and carriageway width the speeds should be much lower. It has been designed to a design speed of 60kph.	N/A
612	Somerset County Council	Appendix 1 - Stewley Lane	90m, 360m, 255m and 180m radii are proposed along with transitions which would be acceptable. Forward visibility splays have been shown around the bends, but no details have been provided to assess acceptability.	Verge widening has been proposed to allow for a forward visibility of 90m which is desirable minimum for a design speed of 60kph, in accordance with CD 109 Table 2.10.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
613	Somerset County Council	Appendix 1 - Bickenhall Lane	Gradients of 0.65%, 1.76.%, 4% and 0.53% would be acceptable.	Following statutory consultation, the design was amended for supplementary consultation and it is no longer proposed for Bickenhall Lane and the overbridge over the A358 to be open to public vehicular traffic.	Yes
614	Somerset County Council	Appendix 1 - Broadway Street and Jordans Farm Junction (Cad Road)	Superelevation of 7.0% has been shown as proposed for the 90m and 255m radius curves. It is considered that only the removal of the adverse camber need be applied.	For highways with a design speed lower than 60kph superelevation or camber will be applied to a maximum of 2.5%. For design speeds greater than 60kph this will be as per DMRB CD109.	N/A
615	Somerset County Council	Appendix 1 - Swept path analysis	No swept path analysis has been provided at this time. Swept path drawings should be provided based on the largest FTA Design Vehicle expected to use the junctions at a scale of 1:200. Where any of the routes are known to be regularly used by abnormal loads, drawings should also be produced for that load.	National Highways acknowledges the request for swept path drawings.  Swept path analysis has been undertaken for the most onerous vehicle to potentially use a named route. This ranges between an FTA 16.5m articulated lorry, refuse truck (in the case of turning heads for newly created cul-de-sacs) and a tractor with articulated trailer for farm accommodation routes.	N/A
616	Somerset County Council	Appendix 1 - Fencing and Road restraint system	Limited details have been provided at this time for boundary fencing or road restraint systems that are likely to be required to deliver the scheme. Care must be taken to ensure that any fencing or road restraint system, old or new, does not impact on visibility splays.	National Highways acknowledges this comment.	N/A
617	Somerset County Council	Appendix 1 - Carriageway Separation	There may also be issues with the parallel alignment and proximity of the old A358 with the new A358 particularly during the hours of darkness and this may require the introduction of anti-dazzle fencing.	National Highways acknowledges this, and screening / hedging will be considered in these areas.	N/A
618	Somerset County Council	Appendix 1 - Swept path analysis	The contact details for the Abnormal Load Routes team are as follows:  Traffic Management Unit, Police Headquarters, PO Box BS37, Valley Road Portishead, Bristol, BS20 8QJ	National Highways acknowledges the information provided.	N/A
619	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	From an accessibility point of view it would make more sense for the diversion of footpath CH 1/5 to be routed in the verge of the off slip to avoid the need for a steep gradient or steps assuming this is permitted under the applicable standards for off-slips.	The footpath CH 1/5 diversion is realigned up the embankment to provide an appropriate gradient of 1:20.	N/A
620	Somerset County Council	Appendix 1 - Field Access	There are a number of field accesses along the existing A358. No details have been provided at this time for alternative arrangements.	Discussions are ongoing with landowners about alternative access arrangements and these are shown on the Rights of Way and Access Plans (Document Reference 2.4).	N/A
621	Somerset County Council	Appendix 1 - Highway lighting	No details have been provided at this time for any highway lighting requirements. Locations such as Mattock's Tree Hill are likely to require additional lighting. Risk Assessments should also be provided for any underbridges that may also require lighting.	National Highways acknowledge the comment made and the lighting strategy has considered that only the immediate approaches to the Nexus 25 signalised junction and Southfields roundabout will require lighting. Modifications to existing lighting on local roads will also be required where the scheme proposals affect these, for example at Stoke Road. A summary of the lighting design is presented in ES Chapter 2 The project (Document Reference 6.2).	N/A
622	Somerset County Council	Appendix 1 - Landscaping	The design of landscaping within the highway limits shall be carried out in consultation with appropriate specialists. Somerset County Council will consider that maintenance implications and where the responsibility for maintenance is passed to a third party, maintenance standards must be	National Highways acknowledges this comment and our environmental team, including landscaping, has also been liaising with Somerset Council.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			agreed. The enhancement of the standard of planting through the use of floral displays and shrubbery must be through agreement with the highway authority and must in no way compromise visibility or safety.		
623	Somerset County Council	Appendix 1 - Five Head River Underbridge (NMU Crossing)	No details have been provided at this time for the underbridge. Please provide further details for widths and head heights. It is assumed that this route would accommodate ridden horses, cyclists and pedestrians. It is recommended that the Public Rights of Way team are consulted.	Headroom over existing access will be maintained at minimum 2.3m, clear width (to handrail) to be maintained at 2.9m. This is constrained by the existing bridge under the existing A358.  The current proposals are to provide the underbridge as a connection for walkers only, due to insufficient headroom and existing drainage/flooding issues. Bickenhall Lane overbridge would provide a more suitable crossing point for cyclists and horse-riders, including for access to the Neroche Herepath. The Public Rights of Way team at Somerset Council has been consulted and discussions will be ongoing.	N/A
624	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	It looks as though a service road is to be provided to give maintenance access to a number of attenuation basins along the northern side of the new A358. The junction of the service road is off Stoke Road and is shown to be at an acute angle making it difficult to look right when pulling out on to Stoke Road. The last section of the access road should be straightened up forming a 90 degree angle.	The alignment of the track has been positioned to minimise landtake in this field by following field boundaries as closely as possible. The access track will connect to Stoke Road at 90 degrees and this has been considered at the preliminary design stage but will be refined and finalised during detailed design, subject to successful DCO consent.	Yes
625	Somerset County Council	Appendix 1 - Existing services	The designer must comply with the requirements of 'Code of Practice' measures necessary where apparatus is affected by major works (diversionary works) under section 84 NRSWA 1991.	National Highways acknowledges this comment	N/A
626	Somerset County Council	Appendix 1 - Existing services	Please provide drawings at the detailed design stage showing the location and depth of all public and private services affected by the works. Experience has shown that if the obligation is put upon the contractor to locate the services, this leaves insufficient time to carry out any required design amendments, or service alterations. As a consequence, no works will be able to commence until such time as the highway authority are satisfied that all necessary utility works have been secured.		N/A
627	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P02	A suggested alternative for the diversion of T 31/27 (&28) as follows (Page 40): The whole footpath route from the new roundabout through to West Hatch Lane would benefit from upgrading to a bridleway status as mitigation for the stopping up of the West Hatch lane crossing point for NMUs.	The suggested diversion for footpath T 31/27 would be outside the scheme boundary and so cannot be considered, as it would represent enhancement rather than mitigation and is considered unnecessary in light of the proposals detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the public rights of way management plan (ES Appendix 2.1 Annex F, Document Reference 6.4). National Highways cannot include land in the scheme boundary for enhancement as part of the CPO process.	No
628	Somerset County Council	Appendix 1 - Village Link Road	National speed limit, 100kph design speed would be acceptable.	A proposed design speed of 60kph has been assumed for Village Road link (north). Village Link Road was the previous terminology for this road link at statutory consultation.	N/A
629	Somerset County Council	Appendix 1 - Stoke Road - Overbridge	It is noted that there will be an additional service road accessed further along Stoke Road near the property known as Bridge Cottage. No details have been provided at this time about how the access road will tie in to Stoke Road. Stoke Road has an open watercourse running along the northern side. It is also noted that the Red Line detailing the extent of the works incorporates Stoke Road.	The proposed service / access road to the attenuation basis is no longer proposed off Stoke Road near to Bridge Cottage. This is proposed to connect to the realigned section of Stoke Road to the south of the proposed bridge over the A358 at Musgrave Farm.	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
630	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction Overbridge	Confirmation is required about the ownership of the overbridge and whether this is to be retained by HE.	It is intended that the bridge will be retained by National Highways, however the road, verges and associated street furniture over the bridge are expected to be owned and maintained by Somerset Council	N/A
631	Somerset County Council	Appendix 1 - Carriageway Widths	No details have been provided regarding road widths for the local highway network at this time. It is recommended that all roads that will be affected or provided are recorded in a table and a separate discussion had with the audit team to decide appropriate widths.	During the course of preliminary design, National Highways has developed a more appropriate approach to local road design standards in conjunction with Somerset Council through a Local Roads Strategy document. This was originally submitted to Somerset County Council (as were) and follow up meetings have been held to review and agree the proposals.	Yes
632	Somerset County Council	Appendix 1 - Existing A358 Dual Carriageway between Henlade and Mattocks Tree Green	It is not clear at this stage what the strategy is for the existing dual carriageway section from Mattocks Tree Green to Henlade. Retention of this dual carriageway section for local traffic will require unnecessary future maintenance and may attract antisocial behaviour. It is recommended that the southern carriageway is broken out and landscaped and that all local traffic wishing to use this route uses the carriageway on the northern side as a single lane two-way road with an access retained to properties on the southern side.	The existing A358 between M5 junction 25 and Mattock's Tree Green would remain the responsibility of Somerset Council as local highway authority and would carry significantly less traffic than it does currently with the scheme in place.  As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway south of Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.	N/A
633	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	It is not known what other unrecorded rights may exist across the scheme. Anyone can currently apply to modify the Definitive Map & Statement. It is therefore recommended that when stopping up rights of way in the DCO that all highway rights that may exist over those routes should also be stopped up. This principle could be broadened to cover the scheme construction to try and mitigate any future unintended legacies of public rights of way being determined over sections of inappropriate highway waste, or joining a live dual carriageway and a further mitigation having to be sought.	The Rights of Way and Access Plans (Document Reference 2.4) with accompanying DCO schedules, make clear the routes to be stopped up; the draft DCO has an article specific to 'Permanent stopping up and restriction of use of streets and private means of access' (Document Reference 3.1).	N/A
634	Somerset County Council	Appendix 1 - Creation of cul-de-sacs	There are multiple locations where the design proposals will sever sections of the existing local road network and subsequently create cul-de-sacs. In such locations the local highway authority will look to maintain the part of that network that is necessary for access and provides public utility.	National Highways acknowledges this comment and a number of turning heads are provided in these locations. National Highways design team responded to the Council comments (included in report reference Sa-6-0081-002-3) via the Local Roads Strategy submitted on 13 October 2021.	N/A
635	Somerset County Council	Creation of cul-de-sacs	Where the remaining local road network will serve either individual properties or businesses the local highway authority will look to explore the transfer of ownership responsibilities.	National Highways acknowledges this comment, discussions are ongoing in relation to transfer of ownership with Somerset Council on local roads. Further details are noted in the Somerset Council Statement of Common Ground (see Statement of Commonality, Document Reference 7.3).	N/A
636	Somerset County Council	Creation of cul-de-sacs	Where possible the length of the cul-de-sac should be minimised. Consideration should be given to the relocation of any existing field accesses and private accesses accordingly with the remaining sections potentially returning to alternative uses.	National Highways acknowledges the comment, and this has been agreed with landowners, as shown on General Arrangement Plans (Document Reference 2.5a) and Rights of Way and Access Plans (Document Reference 2.4).	No
637	Somerset County Council	Appendix 1 - Departure from standard	Departure from standard  The audit team has not been advised of any agreed Departures or Relaxations from Standard for these proposals. The design team should ensure that any Departures are documented and approved in	Proposed departures from standards have been identified and the development and submission of these will continue through the development stage prior to scheme construction. For any departures on local roads, these will be agreed with Somerset Council and developed in accordance with Department for Transport's publication Departures from Standards: Procedures for Local Highway Authorities (October 2011).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			accordance with the Department for Transport's publication 'Departures from Standards: Procedures for Local Highway Authorities (October 2011)'		
638	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P02	Consideration should be given to feasibility of providing a more convenient link between the roundabout and the proposed bridleway for NMUs. The proposed bridleway between Ash Lane and Greenway Lane will benefit from a consolidated surface, possibly metalling, to ensure ease of use by road cyclists in particular.	The new public right of way between Ash Road and Mattock's Tree Green junction would be a restricted byway. Specific surfacing materials will be confirmed at the detailed design stage, subject to successful DCO consent.	N/A
639	Somerset County Council	Appendix 1 - Asset ownership and maintenance	As part of the consultation process, clarification is required regarding ownership, and subsequent maintenance responsibilities, of new assets installed as part of this scheme (signing, lining, drainage apparatus, verges and vegetation/ plantations, embankments serving overbridges, road restraint systems, rights of way limitations and surfaces etc). With regards to drainage, apparatus would include ditches, headwalls, flap valves and attenuation ponds/swales.	As a general expectation, National Highways would be responsible for the ownership and maintenance of the new/upgraded A358 and connecting junction slip roads and the assets that form part of this, whilst Somerset Council would be responsible for the ownership and maintenance of the local road network and the assets that form part of this. Further details will be clarified during detail design and National Highways will continue ongoing engagement with Somerset Council regarding ownership and maintenance limits of the highway network and associated assets.	N/A
640	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000001 P02	The J25/Nexus roadworks have interfered with a number of public footpaths. The Council are currently processing an internal application to divert the paths. This has been delayed due to mapping difficulties; hence no draft order is available yet. Consideration could be given as to whether such changes are capable of being incorporated into the DCO given we are yet to publish an order. Publishing an order in the coming months could risk it being opposed, and that opposed order process then overlapping with the DCO process, which could cause unnecessary inconvenience.	Following discussions with Somerset Council, public footpaths for which Definitive Map Modification Orders (DMMOs) at Nexus 25 are outstanding are addressed in the DCO application where the scheme also affects the footpath. Detailed are provided in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4).	Yes
641	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000001 P02	Oldbroach Lane is subject to an application to modify the Definitive Map & Statement, application 882M. The applicant believes there is sufficient evidence to assert that a Restricted Byway should be added to the Definitive Map. A cul-de-sac Restricted Byway would be of little benefit to the public at this location, however, with a minimal extension at the northern end the Lane could serve as a very useful footpath linking to paths to the north and one to the south of Haydon Lane.	Following discussions with Somerset Council, Oldbroach Lane is included in the scheme for designation as a restricted byway. A footpath would link the lane to Nexus 25 junction and the restricted byway would continue to Stoke Road, Lower Henlade.	Yes
642	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000001 P02	A suggested alternative Page 37. Further consultation with the local community on what would be most beneficial is recommended.	It is not justified to provide a public right of way from Stoke Road towards Greenway Lane because the levels of traffic would be low on Greenway Lane as it would be stopped up as a public highway.	No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
643	Somerset County Council	Stoke Road - Overbridge	Access to the existing private properties will need to be considered and visibility for the private drives kept clear of road furniture such as road restraint systems.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent.	N/A
644	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000001 P02	The Henlade to Mattock's Tree Green dual carriageway does not currently form part of the proposals. The impact of the dualling scheme will render the existing dual carriageway section unnecessary. This presents an opportunity to repurpose part of the carriageway as a bridleway for walkers, cyclists and horseriders. This could also extend to the proposed new footway and existing footway to connect to Lipe Lane/ Stoke Road crossroads.	As an outcome of consultation, including discussions with Somerset Council as local highway authority, the dual carriageway through Henlade would be repurposed to provide cyclist facilities. The eastbound side would be repurposed as a cycle track; the westbound side would cater for two-way vehicular traffic. It is anticipated that detailed design of the repurposed eastbound carriageway, post development consent order, would include space for walkers and horse-riders as well as cyclists.	Yes
645	Somerset County Council	Appendix 1 - Mattocks Tree Green Junction (A358 Ilminster Road)	Facilities for non-motorised users are likely to be required as part of the revised layout.	National Highways agrees with this comment therefore the overbridge includes a shared track on both sides of the road to cater for walkers, cyclists and horse-riders with a suitable margin between the track and the carriageway.	N/A
646	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000002 P02	A suggested bridleway link to enable users to avoid the A378 and provide a local circuit for NMUs in combination with minor lanes and other public rights of way, as follows (Page39). It is recommended that further consultation is undertaken with user group representatives and local communities to understand whether this link would add value.	The suggested bridleway link would be enhancement rather than mitigation and is considered unnecessary in light of the proposals detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4). National Highways cannot include land in the scheme boundary for enhancement as part of the CPO process.	No
647	Somerset County Council	Appendix 1 - Visibility	The envelope of visibility must be obtainable from a driver's eye height of between 1.05m and 2m to an object height of 0.26m.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent. If site constraints prevent this in specific locations, a departure from standard may be required in accordance with established processes.	N/A
648	Somerset County Council	Appendix 1 - Access to the A358 from J25 and the M5	Currently traffic exiting the M5 motorway at J25 southbound are directed to take the first left on to the existing A358 through Henlade. What measures will be taken to redirect traffic to the Nexus 25 roundabout and on to the new A358 dual carriageway.	The existing signage on the M5 junction 25 slip roads and gyratory will be updated, renumbering the existing A358 and directing A358 and Nexus 25 traffic towards the Nexus 25 junction and dual carriageway.	N/A
649	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	Bridleway T 14/8 beyond the private access to houses is in poor condition and would benefit from a consolidated surface. As this will form part of arguably the most strategic NMU link of the whole scheme it is requested that this surface improvement is delivered as part of relocating the parallel (to the A358) section of T 14/8, which should also benefit from a consolidated surface treatment.	Bridleway T14/8 is used by and popular with horse-riders who generally prefer a soft surface and no surface works are proposed. National Highways has discussed this with local horse-riding users and there are no concerns with the existing condition. Further to this, the existing repurposed sections of Bickenhall Lane would have a hard tarmacked surface that would be attractive to on-road cyclists and complement use of the bridleway by horse-riders. Users could choose either the paved lane or unpaved bridleway depending on their preference. The diverted section of bridleway T 14/8 running parallel to the scheme would be paved because it would be used for maintenance access to a pond.	N/A
650	Somerset County Council	Appendix 1 - NON-MOTORISED	The Neroche Herepath is a 13.5 mile circular multi-user route, using a combination of bridleways, permissive paths and minor roads. Unfortunately, one of the permissive sections has been closed due to	The scheme includes a section of the Herepath for hedgerow improvements. Due to the outstanding issues with the path's construction, National Highways cannot include this path for adoption in the DCO. It is also not	No

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		USER (WCHR) PROVISION DRAWING DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	the failure of a section of tyre bale construction. The Council are working with the landowner and other stakeholders to agree a remedial solution in order to enable the section to be reopened. It is noted that the tyre bale section would appear to fall within the red line boundary. Please could Highways England elaborate as to why this is within the scheme and whether there is potential for the scheme to deliver the remedial solution given the proximity of the issue to the A358 and the commitment Highways England has towards improving the situation for NMUs.	feasible to divert the path within the scheme boundary due to potential environmental impacts on woodland.	
651	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	The agreement for the permissive link from the Herepath to bridleway T 14/8 has expired and should no longer be shown on maps. However, this is no reflection on the desire and demand for a link to be provided from the bridleway to the Herepath.	The permissive path has been omitted from the application drawings.	N/A
652	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	The proposals show 3 crossings of the dual carriageway in a relatively short distance, 2 vehicular crossings and one pedestrian. The Bickenhall Lane crossing would be the favoured link to the Herepath, provided an NMU refuge (design tba), is provided to and over the bridge and on to the intersection with the current Herepath route. The intersection will need to meet with bridleway crossing standards. Bickenhall Lane on the eastern side of the A358 is narrow in parts and could be far more attractive to NMUs, accessing it from Hatch Beauchamp and beyond, if it was stopped up to public vehicular access in part. This could lessen the need for any dedicated refuge for NMUs on the western side.	Following statutory consultation, the design was amended for supplementary consultation, Bickenhall Lane and the overbridge would not be open to through traffic. It would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive lane for walkers, cyclists, horse-riders and carriage drivers. The new alignment of the overbridge would not affect the Herepath intersection on the south-western side of the scheme.	Yes
653	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	The proposed underbridge link, which could accommodate cyclists and horse riders as well as walkers, would connect to a possible permissive section of the Herepath. As there is a high likelihood it will remain a permissive section, it is probably not appropriate to provide an adopted link at this location, unless Bickenhall Lane overbridge does not proceed.	The existing headroom would be retained through Fivehead River underpass, and the scheme would not affect the status of the connecting rights of way	N/A
654	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION DRAWING HE551508-ARP-ENM-	The Hatch Beauchamp overbridge provides other options for NMUs. The proposed vehicular crossings raises the question as to what impact this arrangement will have on vehicular use of the road sections of the Neroche Herepath, particularly between Bridge House and Curry Mallet Drove. Parts of the road network were not used when the Herepath was developed due to the nature of the roads in that area, thus Highways England need to assess whether the proposals will have an	All comments on walking, cycling and horse-riding proposals have been carefully considered and the proposals are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4). An assessment of walking, cycling and horse-riding is provided in ES Chapter 12 Population and human health (Document Reference 6.2).	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		ML_A358_Z-DR-CH-000003 P02	adverse impact on the usage of the Herepath by NMUs on the existing road network.		
655	Somerset County Council	Appendix 1 - Visibility	Care shall be taken to ensure that no substantial fixed obstructions obstruct the site lines including road furniture such as traffic signs	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent. If site constraints prevent this in specific locations, a departure from standard may be required in accordance with established processes.	N/A
656	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	Public rights of way T 2/12, T 14/25, and CH 1/UN should be shown as public bridleways, not footpaths.	The DCO application drawings show the correct status of Public Rights of Way (PRoW) in the Rights of Way and Access Plans (Document Reference 2.4).	N/A
657	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000003 P02	This underpass is being proposed as a link for walkers, however it should be secured as a bridleway link. If head room is an issue then mounting blocks and signage would be a simple solution enabling riders to mount and dismount either side.	High Bridge underbridge would have a headroom of 2.3m, which is within standards for walkers only. National Highways anticipates that a departure from standard would allow a bridleway with restricted headroom to be provided including mounting blocks. The bridleway would run beneath the underbridge along the northern side of the river and connect to Capland Lane.	Yes
658	Somerset County Council	Appendix 1 - Visibility	All land over which visibility splays pass shall be available for dedication to the local highway authority.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent.	N/A
659	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	There would appear to be little merit in retaining the sections of CH 1/2 & CH 1/3 to the north of the Kenny link road, as follows: Page 44	The sections of CH 1/2 and CH 1/3 north of Stewley link would continue to provide connectivity and National Highways would not want to stop up any footpath unnecessarily.	No
660	Somerset County Council	Appendix 1 - Visibility	Gradients may affect stopping distances and where applicable longitudinal gradient (%) should be incorporated when calculating SSD.	National Highways acknowledges the comment. This has been considered at the preliminary design stage and will be refined and finalised during detailed design, subject to successful DCO consent.	N/A
661	Somerset County Council	Appendix 1 - Village Road	510m, 255m and 90m radii are proposed along with transitions which would be acceptable. Forward visibility splays have been shown around the 90m radius bend, but no details have been provided to assess acceptability.	Verge widening has been proposed to allow for a Forward Visibility of 90m which is Desirable Minimum for a design Speed of 60kph, in accordance with CD 109 Table 2.10.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
662	Somerset County Council	Appendix 1 - Ashill Road - Rapps Road Link	720m, 127m, 140m and 90m radii are proposed along with transitions which would be acceptable. Forward visibility splays have been shown around the bends, but no details have been provided to assess acceptability.		N/A
663	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	The proposed development will impact directly on applications 510M and 849M. The impact on 510M is only in part and will be a positive one in that all users will be able to use the new construction. The impact on 849M is a negative one. If rights are proven to exist then the development will cul-de-sac these public rights. The latest proposals show local roads connecting either side to the Ashill junction overbridge, which would be capable of providing mitigation for the highest rights of Restricted Byway, should they be found to exist. It is also noted there is the potential for bridleway provision/ mitigation at the Ding underbridge, also helping to offset any negative impact caused by the possible interference with unrecorded rights over 849M. Where alleged rights are likely to be obstructed by development, the Council has a Statement of Priorities that would enable such an application to be taken out of turn. There is no firm view yet as to whether there would be merit in taking this application out of turn, but the Council's position on this will be reviewed as the development progresses and a decision taken once any permission has been granted.	National Highways acknowledges these comments. Footpath CH 1/21 (849M) would be stopped up as part of the scheme to avoid a dead-end path. In relation to application 510M, from the new Ashill junction, Ashill Road would cross Copse Lane on embankment approximately 350mm above existing ground level and a road crossing could be added at detailed design. In relation to application 849M, the status of Merryfield Lane would not be affected by the scheme.	No
664	Somerset County Council	Appendix 1 - Village Link Road	360m and 127m radii proposed along with transitions which would be acceptable. A forward visibility splay has been shown around the 127m radius bend, but no details have been provided to assess acceptability.	Verge widening has been proposed to allow for a Forward Visibility of 90m which is Desirable Minimum for a design speed of 60kph, in accordance with CD 109 Table 2.10.	N/A
665	Somerset County Council	Appendix 1 - Hatch Park Cattle Creep	It is noted from the latest design that fencing has been added along with an attenuation basin and some drainage channels which would appear to prevent access to the Hatch Park Cattle Creep and the fields beyond.	An access track is proposed, with some localised regrading, to provide access to the existing Hatch Park Cattle Creep, which has been extended under the new eastbound carriageway. Access is provided to the cattle creep and fields either side of the A358.	N/A
666	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	Public bridleways CH 1/25, 26, & 27 and CH 2/23, 24 25, & 26 are currently shown as public footpaths. Please amend, and it is contended that they should all be stopped up as part of the current proposal. It is also not clear what is intended for the stub of unclassified road highlighted in orange below. It is unlikely that the Council would wish to retain this section of road.	The drawings for the DCO application are correct (Rights of Way and Access Plans (Document Reference 2.4)). The stub of unclassified road would be stopped up as public highway and used for maintenance access.	N/A
667	Somerset County Council	Appendix 1 - NON-MOTORISED USER (WCHR) PROVISION  DRAWING HE551508-ARP-ENM-ML_A358_Z-DR-CH-000004 P02	Please provide detail as to what mitigation is intended for NMUs between Horton Cross and the B3168/Station Road. Ilminster is a significant population and it is important a safe connection between Horton Cross and Ilminster is delivered.	The speed restriction between Monk's Yard and Southfields would be reduced to better manage mixed traffic flows. The scheme includes a new road crossing at the services access as part of the traffic signal control. New footway/cycleway construction would tie into the existing at the new crossing with filters for cyclists to exit or enter the carriageway. National Highways considers there is insufficient space within the highway boundary to further improve walking and cycling facilities.  The existing shared use path at Southfields roundabout between the A358 (west) and A303 (south) arms would be widened, however a crossing of the A303 (south) is outside the scope of the scheme.  National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme	Yes

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>The proposals are detailed in in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (ES Appendix 2.1 Annex F, Document Reference 6.4).</p>	
668	Somerset County Council	Appendix 1 - Other Considerations	<p>Status of new routes</p> <p>The Council's Rights of Way Improvement Plan 2 supports an inclusive approach to route development for NMUs, i.e.: where possible the highest status (restricted byway) should be secured. Restricted byways allow non-mechanically propelled vehicles (NMPVs e.g.: horse and cart) in addition to WCHR. In allowing access for NMPVs it can also enable ease of unauthorised use by motor vehicles, which can cause conflict with legal users as well as damage to the surface. For these reasons it is recommended that carriage drivers in the area are consulted as to which routes could be of benefit to them as restricted byways and appropriate controls carefully considered to as far as possible prevent unauthorised use of them.</p>	National Highways has been in regular discussions with local horse-riding groups including carriage drivers. Local users have also responded to the statutory and supplementary consultations and their comments have been addressed. Design of restricted byway access points would be discussed at detailed design stage, subject to successful DCO consent.	N/A
669	Somerset County Council	Appendix 1 - Other Considerations	<p>Widths and limitations</p> <p>There should be a certified schedule appended to the DCO of the widths of public rights of way created and the limitations along them. This will be necessary to enable the Council to accurately update the Definitive Map &amp; Statement and aligns with how orders are made under the Highways Act 1980.</p> <p>Minimum widths should be 2m for footpath, 4m for bridleway and 5m for restricted byway. Refuges for NMUs alongside roads to be considered on a case by case basis.</p> <p>Limitations should accord with BS 5709:2018. The Council will only authorise stiles in exceptional circumstance and it is envisaged that any new footpaths as part of the scheme will not require stiles with the presumption in favour of gaps, then gates.</p>	The draft Development Consent Order (DCO) (Document Reference 3.1) includes all appropriate schedules and associated details being sought. All new Public Rights of Way would meet with the council's minimum width requirements. Details of limitations would be addressed at the next stage during detailed design, subject to successful DCO consent.	N/A
670	Somerset County Council	Appendix 1 - Other Considerations	<p>Overbridges and underbridges/passes</p> <p>All overbridge parapets should be 1.8m high. Additional road/verge space may be required where high usage by NMUs is expected.</p> <p>Underbridges/passes should allow sufficient headroom for walkers. Horse riders and cyclists should be given the option to dismount if for reasons of headroom or safety it is not possible to use an underbridge/pass. It is preferable to be inclusive with mitigation than to exclude these NMUs. Mitigation if required will likely be in the form of</p>	All the overbridges would include a highway verge and 1.8m parapets with the bottom a minimum 600mm solid infill panel. All underbridges would have sufficient headroom for walkers in accordance in with DMRB CD 143. The underbridges are assessed individually for their suitability for use by cyclists and horse-riders including the appropriateness of dismounting.	N/A

Row ID	Consultee	Survey Question (if relevant)	Matters raised in response to 2021 statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
			mounting blocks and signage, with consideration given to a traffic regulation order.		
671	Somerset County Council	Appendix 1 - Design Standards	<p>Design Standards</p> <p>The geometric design of the proposed A358 main carriageway and associated junction connector roads was developed in accordance with the Design Manual for Roads and Bridges (DMRB) Volume 6. The following design standards have been used:</p> <ul style="list-style-type: none"> <li>- TD 9/93 Highway Link Design (DMRB 6.1.1) [CD 109]</li> <li>- TD 27/05 Cross Sections and Headroom (DMRB 6.1.2) [CD 127]</li> <li>- TD 22/06 Layout of Grade Separated Junctions (DMRB 6.2.1) [CD 122]</li> <li>- TD 16/07 Geometric design of Roundabouts (DMRB 6.2.3) [CD 116]</li> <li>- Principles of DMRB Volume 6 would also be applied to the design of local roads.</li> </ul> <p>However, this approach is subject to agreement with the local highway authority, Somerset County Council. Relaxations from requirements of the DMRB may be necessary along local roads to ensure works are appropriate to the standard and character of adjacent existing roads.</p>	Somerset Council as local highway authority does not currently have a set of prescribed design standards and initially suggested the use of the DMRB. However, the use of DMRB standards, particularly in relation to road cross sections and geometry, are not entirely appropriate for the local road network. National Highways has developed a more appropriate approach to local road design standards in conjunction with Somerset Council through a Local Roads Strategy document. This approach aims to ensure that the design parameters are appropriate for the rural context and the standard and character of existing roads to which they connect. This would reduce the number of departures that may otherwise be required if a blanket approach to DMRB, which is focussed on the design of trunk roads, was otherwise used.	N/A
672	Somerset County Council	Appendix 1 - Drainage	All matters relating to drainage will be covered as part of a separate submission.	National Highways has continued to engage with the Somerset Council drainage team.	N/A

## Appendix 5.3

### Summary of matters raised by section 42(1)(d) Persons with an Interest in the Land (PIL)s in response to the 2021 statutory consultation and National Highways response

**Table 5.3 Summary of matters raised by section 42(1)(d) Persons with an Interest in the Land (PIL)s in response to the 2021 statutory consultation and National Highways response**

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
1	360	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	My biggest concern is the design at this Junction. The temptation will be to ignore the new road layout & proceed on the existing A358 through Henlade (currently a nightmare). One almost has to design the new Junction to "disguise" the exit back onto the old A358 road - especially the HGV's & big lorries - design the turn with a very tight radius or something.	Given that the proposed Henlade bypass section of the scheme provides faster journey times, safer journeys, a higher capacity and more journey time reliability than the existing A358 through Henlade, it is not anticipated that any through traffic would choose to use the existing A358 through Henlade with the proposed A358 scheme in place. The traffic flows through the old A358 are forecast to reduce by over 90% in the design year (2046), and the traffic using this stretch of road is expected to be local traffic and traffic wishing to use Taunton Gateway Park and Ride.	N/A
2	360	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	Still can't really see it happening - my Father worked for PowerGen and they had plans for the road back in the nineties and the route looks very similar to the "preferred" route selected now - 30 years later...still nothing Even if completed is scheduled for 2028 - no construction project runs on schedule, let alone on budget. One concern is the noise factor - will there be noise barriers installed along the Lower Henlade section to the motorway interchange.	As informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of acoustic bunds and barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so.  An acoustic barrier and bund combination will be provided on both sides of the proposed scheme in Lower Henlade. On the eastbound carriageway this will be between approximate chainage 1800 before Stoke Road overbridge to just past Stoke Road overbridge and on the westbound carriageway it will extend from just past the junction of Greenway Lane and Stoke Hill at approximate chainage 3350 to chainage 1980 just past Stoke Road overbridge as detailed in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3). The scheme will have a low noise surface which will also minimise noise emissions.	N/A
3	373	Do you have any other comments you would like to make about our proposals?	Mitigation measures - planting I'd like to make a request that: The hedge row to the front of our house be allowed to grow up with immediate effect to give our property some visual protection from what is going to happen in the field beyond, and left to grow into trees.	National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.  As part of the scheme hedgerow enhancements are proposed along the hedge between the scheme and Ivy House caravan park. The aim of this is to enhance the hedgerow to encourage a taller hedgerow by changing the cutting regime.	N/A
4	373	Do you have any other comments you would like to make about our proposals?	I'd like to make a request that: That the ditches bordering our lane are maintained to prevent flooding of the lane.	Maintenance of the ditch along Stoke Road is either the responsibility of Somerset Council or the adjacent landowner. There is no proposed works to the ditch adjacent to your house and the maintenance of the ditch will remain the same responsibility when the scheme has been constructed.	N/A
5	373	Do you have any other comments you would like to make about our proposals?	I'd like to make a request that: Trees be planted between that hedgerow and the new road to help shield our property and those of our neighbours from light and noise pollution.	The proposed environmental mitigation includes the enhancement of the existing hedgerow running along Stoke Road. The proposal includes two new hedgerows, one including trees between your property and the new road. Earth bunds have been added to reduce noise and the visual impact of the proposed scheme on nearby properties and communities.  With regard to the use of trees to act as acoustic screening to minimise noise, this approach is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of vegetation required, tree planting is not generally adopted as a reliable noise mitigation measure. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement Chapter 2 The project and within Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
6	425	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Unnecessary incursion into the countryside. Over engineered and expensive	<p>It is not considered that the proposals would result in urbanisation of the villages, however Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses and reports the landscape and visual impacts of the scheme (including any urbanising features) on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.</p> <p>The proposed scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land function. The assessment of effects on agricultural land is presented within Environmental Statement Chapter 9 Geology and soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p> <p>National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including journey time savings to road users, road safety, wider economic impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to examine whether the benefits outweigh the costs, and whether the business case for the scheme is sufficiently strong to support delivery. This is reviewed at every stage of work to determine whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the Development Consent Order is granted.</p>	N/A
7	425	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	I support the alternative proposals put forward by the 12 local Parish Councils	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	N/A

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
8	425	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	The need is for two well engineered junctions at T25 and Southfields. This would eradicate the current congestion on the A358	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Environmental Statement Chapter 3 Assessment of alternatives (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>Somerset County Council (as were) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes.</p> <p>As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS3) period (2025-2030).</p> <p>In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p>	N/A
9	425	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Not supported by the parish councils	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	N/A
10	425	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Unnecessary	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle. The proposed A358 design includes a link between Ashill junction and Stewley, referred to as the Stewley link. This link is proposed to reduce the severance of Stewley and to ensure Stewley's residents have access to the A358.</p> <p>The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users.</p> <p>The proposed scheme is part of the Government's second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users.</p>	N/A

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
11	425	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	See Parish Council alternatives	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	N/A
12	425	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	See Parish Council alternatives	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	N/A
13	425	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	See parish council comments	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	N/A
14	425	Do you have any other comments you would like to make about our proposals?	The existing "new" roundabout at J25 is dangerous. Take a look at the skid marks caused by vehicles arriving at the first set of traffic lights. Blind corner and then a blind road summit on a bend 25 metres away	As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	N/A
15	433	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Traffic problems every day driving through Henlade. This section needs to be addressed and the traffic routed away from the village. As this is the beginning of Section1 of the scheme I agree it should be done.	The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.  National Highways acknowledges the comment. The section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
16	433	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Traffic problems every day driving through Henlade. This section needs to be addressed and the traffic routed away from the village	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
19	433	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	Very half hearted and not well thought out. Almost feels like an after thought because you need to look like you are doing something for walkers, cyclists and horse riders.	<p>Provision for walkers, cyclists and horse-riders has been integral to the design from options assessment to the current scheme. National Highways endeavours to preserve existing public rights of way as much as possible. Unfortunately, some diversions and stopping up of public rights of way would be inevitable but users would no longer be trying to cross the A358 at grade, making the public rights of way network safer and more inclusive. The scheme includes an alternative offline cycle route that uses lightly trafficked roads and traffic-free routes, utilising existing infrastructure and allowing cyclists to pass through places of interest. Cycling would not be prohibited on the new dual carriageway based on the classification of the road. National Highways anticipates that the signed cycle route and local roads would be more attractive than the scheme to the majority of cyclists.</p> <p>Taking into account consultation feedback, the design of the scheme has been modified to limit traffic access to the Bickenhall Lane overbridge to local farm traffic, but it would not be open to general vehicular through traffic. The new bridge would provide connectivity for walkers, cyclists, horse-riders and carriage drivers across the scheme. The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for walking, cycling and horse-riding.</p> <p>This change has been made to discourage alternative routes through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on walking, cycling and horse-riding users along Bickenhall Lane. As a result of this change, there will be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic is forecast to route via Cold Road and Higher West Hatch Lane to access the junction.</p>	Yes
20	433	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	not needed if some slip road are used at specific places along the road.	National Highways acknowledges this comment, however, Village Road will not be provided with a junction on the A358 under the scheme. Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. An additional junction would also have additional environmental impacts	N/A
21	433	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Road dualling not needed on this section	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges comments raised, the section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	N/A

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
22	433	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	Road dualling not needed on this section	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges comments raised, the section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. 27	433	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	Road dualling not needed for this section	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges comments raised, the section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	N/A
28	433	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	These plans seem like an after thought and have not been properly designed or thought through.	<p>Provision for walkers, cyclists and horse-riders has been integral to the design from options assessment to the current scheme. National Highways endeavours to preserve existing public rights of way as much as possible. Unfortunately, some diversions and stopping up of public rights of way would be inevitable but users would no longer be trying to cross the A358 at grade, making the public rights of way network safer and more inclusive.</p> <p>The scheme includes an alternative offline cycle route that uses lightly trafficked roads and traffic-free routes, utilising existing infrastructure and allowing cyclists to pass through places of interest. Cycling would not be prohibited on the new dual carriageway based on the classification of the road. National Highways anticipates that the signed cycle route and local roads would be more attractive than the scheme to the majority of cyclists.</p> <p>Proposals for walkers, cyclists and horse-riders and improved connections as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (Document Reference 6.4, Appendix 2.1, Annex F).</p>	N/A

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
29	433	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	Section 1 of this scheme needs to happen and traffic re-routed around Henlade. The rest of the scheme should be scrapped as it cannot be justified without Henlade and the amount of money that will be spent on dualling this road is unacceptable when the government are facing a climate emergency and we should be looking at other ways to get around including buses, cycling and walking.	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Environmental Statement Chapter 3 Assessment of alternatives (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges the comment. The section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	N/A
30	433	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	This was horrifying reading. The amount of permanent environmental damage that will be caused to this beautiful historic area is completely unjustifiable.	<p>National Highways acknowledge concerns over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.</p> <p>As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).</p>	N/A
31	433	Do you have any other comments you would like to make about our proposals?	Section 1 only!!	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Environmental Statement Chapter 3 Assessment of alternatives (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges the comment. The section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	N/A

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
32	446	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Option 3 of doing nothing should not be considered as an option. Without Option 1 or 2, when it floods, the only access to Hatch Beauchamp from residents of Capland lane, Stewley and Radigan Lane will have to be a considerable journey to the Rapps Junction and then all the way back through Ashill. Many of us often cycle to Hatch Beauchamp and the alternative is much too far to cycle. If Option 2 of flood improvements is chosen, note that it is not just the two places identified on your plan that flood. The road at the bottom of Hatch Beauchamp as you enter the country lanes from Station Road onto Stewley Road (leaving the 30mph zone) also floods along that stretch and around the corner. So three areas of flood prevention will required, not two. A bigger concern with this option is the increased traffic along this stretch. The mile from Holman's Farm, Stewley towards Hatch Beauchamp is very narrow, high hedges, a winding road, with only one passing point and with increased traffic this will become dangerous, particularly as it is used frequently by horse riders and cyclists. Cars could have to reverse up to half a mile to pass on this stretch. Option 1 is the best option. There must be considerable cost to put in the flood prevention, which would not be necessary with this option. This route would be much safer for horse riders and cyclists. As the link is so much shorter, vehicles having to reverse up to half a mile to allow cars to pass would also not be an issue.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
33	452	Do you have any other comments you would like to make about our proposals?	Principle/Henlade I disagree with the whole project, except for the need to do something about the bottleneck at Henlade and the effects of constant heavy traffic through the village on the quality of life of the residents. Other than that, all that is needed to maintain traffic flow along the A358 is to make the whole section into a dual carriageway, retaining all existing access from local roads and leaving gaps in the central reservation for vehicles wishing to turn right.	The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Environmental Statement Chapter 3 Assessment of alternatives (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.  National Highways acknowledges the comment. The section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	Yes
34	452	Do you have any other comments you would like to make about our proposals?	Taken as a whole, the scheme is vastly over-expensive, over-complicated and unnecessary. It's a sledgehammer to crack a nut. It will mean years of disruption to the lives of local people, extensive loss of farmland and will be detrimental to the environment and the rural character of the area.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.  The case for the scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.  The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.	
35	453	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Principle/Henlade It feels as if this very unnecessary and expensive project is going ahead despite countless consultations and countless residents expressing their concern. You will be decimating local communities and spoiling rural areas, chopping down hundreds of trees and digging up green land for something completely pointless as we live off the a358 and use the road daily and have no real problems with it apart from a bit of bottle necking at Henlade, which could easily be solved by just improving that section	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.  The case for the scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.  The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.	Yes
36	453	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	As in question 2a, you'll be spoiling a beautiful rural village with motorway bridges and building work. It's so depressing for residents as none of us want it. This is for the rich politicians during 6 weeks of summer to drive to their 2nd homes. It's frankly a joke	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.  The case for the scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.  The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
37	453	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Preference for: Option 2 – Retain the existing route via Stewley Lane and Stock's Lane and provide localised flood improvements Reason: Connecting road objection Not a connecting road - it will totally wipe out our countryside view (behind our properties) and the only people this road would benefit are Capland Lane/Capland Court residents and none of us want a connecting road! A basic cycle path/walking path yes but a road, definitely not. We have fed this back to consultants directly. It's bad enough that we're going to be now living next to what will essentially be a motorway without subjecting us to an additional unwanted road on top! We're happy to use the back lanes to get to where we need to go as long as Capland lane is cut off. The Lane should be cut off BEFORE building work commences. I will be devastated to see our beautiful trees and hedgerows destroyed. Not that any of you care but they are home to wild/rare orchids, many birds of prey etc.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.  The alignment of this link has been kept as close to the A358 as possible to reduce the impact on the surrounding landscape and farmland.	Yes
38	453	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	As above how can a tiny sleepy village like hatch beauchamp now be subjected to motorway bridges it makes me feel so so sad!	The need for the scheme is established and set out in the Case for the Scheme. The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).	Yes
39	453	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Please don't try to sell this project as improvements for walkers etc. We will go from having one normal road to what is essentially a motorway so this doesn't improve anything for anyone!	Provision for walkers, cyclists and horse-riders has been integral to the design from options assessment to the current scheme. National Highways endeavours to preserve existing public rights of way as much as possible. Unfortunately, some diversions and stopping up of public rights of way would be inevitable but users would no longer be trying to cross the A358 at grade, making the public rights of way network safer and more inclusive.  Proposals for walkers, cyclists and horse-riders and improved connections as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (Document Reference 6.4, Appendix 2.1, Annex F).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
40	453	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	Environment Stop trying to pretend you care about the environment. If you did you wouldn't be proposing this project at all. We have owls, bats, deer, wildlife teaming here, which will lose its home when your building starts. It makes me so sad and angry and powerless.	National Highways has undertaken an extensive suite of ecological surveys to inform the Environmental Impact Assessment and identified mitigation measures required to protect wildlife during construction. National Highways has produced an Environmental Statement (Document Reference 6.2) and an Environmental Management Plan (EMP) (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities on the environment, including wildlife, would be managed. This includes species and habitat specific mitigation strategies which detail measures to be taken during both the construction and operational phases of the scheme to protect wildlife.  Habitat protection measures are detailed within the EMP, such measures include the establishment of no-construction buffer zones around sensitive habitats such as ancient woodlands and veteran trees, installation of tree protection fencing and pollution prevention measures. The translocation of trees, hedgerow and orchids is proposed in key locations within the scheme. These locations and detailed strategies for the successful implementation of the translocations are included within the EMP.	Yes
41	460	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	As owner of land on Park Barn Lane . At the Monks Yard presentation i discussed route with design representative. We discussed a different route for the secondary link road to the south of my buildings keeping closer to the A358 . Also keeping to the south side of the field in front of the buildings and then linking with the curve junction. Therefore less impact on my farm and farming practices . Also less impact on the residential properties at Park Barn . Tree planting could then be carried out to the south east of this road and not totally overshadow the properties at Park Barn . Also leaving me with a decent sized field on the north side . We both agreed this made sense . Could i have a discussion with the design	Following further discussions between National Highways and this landowner, this design change was incorporated, and presented at supplementary consultation. The mitigation design has changed in this area with grassland proposed in front of the properties and the woodland planting moved away from the property.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
42	460	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	As the landowner of the farm at Park Barn Lane i strongly disagree with the line taken at this point . At Monks Yard i discussed with the design manager for the option of moving the road to the south of my buildings on Park Barn Lane nearer to the A358 and keeping it to the south of the field to the south east of Park Barn Lane nearer to the junction but still connecting to the looping connection point . This instead of cutting through between the buildings and very close to the residential properties . This would have much less impact on my farm and farming activities . It would also leave the residential properties further from the road for more privacy and security . Tree planting could then be placed on the southern side of this road on the remaining area . Water retention could be here also as drainage naturally runs to the south / southeast corner of this field . It would leave me with a decent sized field to the north with the whole farm still in a ring fence for livestock and machinery movement without crossing the linking road . The existing tree planting proposal in front of the residential properties would leave these properties seriously over shadowed and plunged into shade most of the time . At present they have a decent outlook . Tree planting would be much better in the south side corner strip. The road could also be kept closer to the A358 in the field further a long towards the Wessex Water treatment plant . The field to the North East would then hardly need to be touched except for a little tree planting a long the north side of the road. We both agreed all this made sense . Could you please forward to the design management and i await a feedback..	Following further discussions between National Highways and this landowner, this design change for Stewley Link was amended, incorporated, and presented at supplementary consultation. The mitigation design has changed slightly in this area with grassland proposed in front of the properties and some of the woodland planting removed. Some fields in this location are still required for mitigation purposes.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
43	467	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	M5 Junction 25 has recently been upgraded. This new proposal is to partly justify new A358 to a proposed new business park but the upgrade recently completed is more than adequate.	<p>National Highways has been liaising closely with Somerset Council (formerly Somerset County Council) during the development of the scheme. Somerset County Council were granted planning approval for the M5 junction 25 improvements, which included the new Nexus 25 roundabout, in March 2018. In early 2018 the A358 Taunton to Southfields Dualling Scheme (the scheme) consulted on route options.</p> <p>Prior to that approval and in January/February 2018, the 'Pink' option was considered to be the best performing, and it included a direct connection from the A358 to a new motorway junction south of junction 25. Somerset County Council therefore reasonably assumed in their design of the M5 junction improvements that the scheme would be constructed in line with the 'Pink' option, as that was the most likely configuration of the scheme at the time.</p> <p>Following options consultation in January/February 2018 the affordability of the scheme and the impact on public open spaces was reviewed by National Highways and the direct connection to a new M5 junction was removed from the scheme. This resulted in the 'Pink Modified' option, which was announced as the preferred route by National Highways in June 2019.</p> <p>In the meantime, Somerset County Council had already appointed their contractors for the construction of their M5 junction 25 improvements in February 2019 and the construction work began in July 2019.</p> <p>Any delay to the more advanced M5 junction 25 works to take into account the change from the A358 arrangement proposed in the 'Pink' option to 'Pink Modified' option would have been unreasonable at that time and could have jeopardised that important project.</p> <p>The proposed design change to have the Nexus 25 junction as a signalised junction would better accommodate a crossing of the A358 for walkers and cyclists. The proposed signalised crossing would provide adequate capacity for the predicted traffic flows and allow more control over traffic movements by linking the operation of the signals to those at the M5 junction 25 roundabout and Taunton Gateway Park and Ride. The signalised crossing is incorporated into the timings and has no significant effect on the time given to vehicle traffic.</p> <p>There is no significant difference in the amount of delay between a signalised Nexus 25 junction versus an enlarged roundabout arrangement during typical peak period operation. The signalisation allows better control of traffic flows, and accommodation of tidal movements into and out of the Nexus 25 employment site at different times of day.</p> <p>National Highways has undertaken operational modelling of all junctions along the A358 corridor, including the upgraded Nexus 25 junction. These confirm that all junctions along the A358 will operate within their practical capacity in the forecast situation, with the upgraded A358, and full build out of local developments such as the Nexus 25 employment site. As part of this process forecast queue lengths at all junctions have also been reviewed to ensure that there are no operational or safety concerns. The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
44	467	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	I cannot see the point of the new section of A358 and therefore the new bridge over this is irrelevant. It will carve up farms in the area making it harder to access their land for the said farmers and land owners.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
45	467	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	This whole section of road carves up the countryside splitting whole communities up isolating people each other it damages the make up of land will also be hideously expensive to implement. The existing A358 link should have a roundabout put in where the lower Henlade road crosses the road to the creech st michael road as this is already a 30 mile an hour limit. This being a major accident black spot in the recent years.	<p>The scheme would deliver several significant benefits for Henlade. As a result of moving traffic away from the village centre, Henlade would experience significantly reduced traffic volumes (a reduction of over 90% in 2046). This would significantly reduce vehicle emissions in the village and should improve the existing Henlade Air Quality Management Area.</p> <p>National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.</p> <p>National Highways has sought to limit the severance of communities adjacent to the scheme by maintaining important connections through the provision of a number of local highway overbridges/underbridges. Traffic modelling of the A358 and surrounding area helps us to understand the changes in community connections. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once improved. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with traffic on the A358.</p> <p>With regards to the expense of the scheme, the South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>The existing A358 through Henlade is forecast a reduction in traffic of more than 90% because of the scheme, particularly the Henlade Bypass section. As a result, the operation of junctions involving minor roads along the existing A358 through Henlade will improve significantly due to the reduction in traffic on the existing A358 in conflict with traffic from these side roads. As a result there will likely be a significant improvement in accident rates along this stretch of road. Because of this, no junction improvements are included in the design along the existing A358 through Henlade.</p>	Yes
46	467	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	This section reminds me of approaches to a major motorway system. This road system is unnecessarily complex and will make the local communities around it have to travel extra miles to access their villages and by cutting routes that have worked well for travellers in the local communities for years will increase their travelling times.	<p>Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
47	467	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	This makes no sense and is a waste of time and money. The accesses for these areas work well as they are, leave well alone.	National Highways now proposes a new junction and link road that would provide access to the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm Units from the Mattock's Tree Green junction. A bridge connecting over the proposed A358 mainline would not be feasible due to constraints such as the existing Somerset Progressive School. Such a structure would impact the school and entrance as the A358 is mostly at its existing level, so a link over would require extensive work to ensure appropriate headroom, thus greatly effecting the school.  The proposed solution ensures connectivity to the A358 via the all-movements junction to allow access to all areas around the scheme.	Yes
48	467	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	This route speaks for itself. The original road is almost to stay intact as it has for many years. New roads put in to connect to that new section of road proposed. The road works well as was and should be left as was.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.  The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.  The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.  Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes
49	467	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	Very expensive to instigate and very damaging to the topography, to historical sites of interest and local environment. It would cut up land owners fields and farms, land will be harder to access for said farmers having to use more resources to navigate around the new proposed road system to go about their daily business.	National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.  As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).  The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land use. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and Soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).  National Highways has sought to limit the severance of agricultural holdings which farm land both sides of the scheme through the provision of a number of local highway overbridges/underbridges. Where it has been considered agricultural circumstances require additional mitigation, agricultural access tracks which link severed parcels of agricultural land to the local highway network have been provided.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
50	467	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	This would be a good idea if slip roads were built on the two sides of the bridge one on each side to access the existing A358 with out dualling the existing road. The proposal again makes accessing the A358 for local traffic a drawn our process inconveniencing local people in the neighbouring villages to the road so makes it an irrelevance.	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first Road Investment Strategy (RIS1) intention to create a new Expressway corridor into the region, but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>For the A358 to become a high-quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed, complying with DMRB CD 122. As such, all of the direct local road accesses have been removed and access to Mattock's Tree Green junction and Ashill junction are provided. As such, any new intermediate junctions that are constructed as part of the scheme would need to take the form of a full grade-separated junction similar to the one near Ashill or Mattock's Tree Green. Factors such as the cost, value for money and environmental impacts of this additional junction also need to be considered. A review of the amount of traffic that would be likely to use additional junctions does not justify the costs or environmental impacts of these junctions.</p>	Yes
51	467	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	<p>Preference: Option 3 – Retain the existing route via Stewley Lane and Stock's Lane without providing localised flood improvements</p> <p>Reason: There was a proposal to raise the road level of the lane in stocks lane opposite mine and my neighbour's property. I think this will have a detrimental effect if carried out. The properties have never flooded in the past and I think this could expose them to possible flooding and increase the flooding properties in stewley lane, that is why is should be left as is.</p>	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
52	467	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	This road is only being proposed because potentially three routes onto the A358 will be cut if it is dualled and if given the go ahead with inconvenience local travel to and from local villages.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
53	467	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	The junctions as is work well for local traffic and communities with the new proposals some of these access roads will be cut. Dualling this section in this manner makes no sense on A358 and be a very expensive option for not much gain.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.	
54	467	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Again masses of asphalt isolating further communities from each other and making nearby towns harder to access travelling further to enter the A358 because of roads having to be cut from the main road. This section has hold ups from time to time but dualling this will make little difference to this problem. Yet to time details about Southfields roundabout.	<p>Ashill junction has been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.</p> <p>For the A358 to become a high quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed, complying with DMRB CD 122. As such, all of the direct local road accesses have been removed. and access to Mattock's Tree Green junction and Ashill junction are provided.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
55	467	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Two roads instead of one for a few miles doesn't make economic sense.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the proposals.</p> <p>National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including journey time savings to road users, road safety, wider economic impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to examine whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient strong to support delivery. This is reviewed at every stage of work to determine whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the Development Consent Order is granted.</p> <p>Stewley Link provides a dedicated route for communities on the eastbound side of the A358 to access the proposed A358 via Ashill Junction. This single carriageway link would provide access to property along the northern side of the route from the Capland area including the sewage treatment works and Park Lane, as well as providing emergency access to Royal Naval Air Station Merryfield.</p>	Yes
56	467	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	This road will further inconvenience farmers and landowners getting to land on both sides on the A358, as well slices of land having to be taken from said landowners for the proposed link road to connect stewley and Ashill and getting on the A358 for A303.	<p>The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land use. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and Soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
57	467	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us	This again will take local traffic along way out of its way to access A358 for M5.	The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		know the reasons for your response			
58	467	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	This again will take local traffic along way out of its way to access A358 for M5.	The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes
59	467	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	I think I have summed up my feelings and reaction to this in the previous answer and at the moment the so called upgrading plans for the Southfields roundabout haven't been announced yet! more difficult for HGVs to access Ilton and Ashwell industrial estates with longer travel to junction off A358 in proposals.	<p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three lane approach from the A303 (East), a three lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicates that it will operate within its practical capacity in the design year (2046) even during peak hours.</p> <p>Southfields roundabout design has been further amended following consultation feedback in order to maximise road safety and further enhance capacity of the junction. These changes are an increase in the length of the parallel merge layout to the A303 eastbound from the segregated left turn lane at the roundabout, and the widening of the A358 (West) approach between Ilminster Services and the roundabout.</p>	Yes
60	467	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	This seems to be gesture to try to soften the blow of the proposed road scheme on local walkers, cyclists, horse riders that will have some of their leisure routes that they take cut off or disrupted a token offering.	<p>Part of the design guidance for the scheme includes DMRB GD 300 and this requires consideration of alternative provision for cyclists. The provision can be either within the scheme corridor (online) or outside (offline). National Highways looked at the pros and cons between providing for cyclists online or offline and the case for offline is stronger, utilising existing infrastructure and allowing cyclists to pass through places of interest.</p> <p>Provision for walkers, cyclists and horse-riders has been integral to the design from options assessment to the current scheme that is being submitted for a development consent order. National Highways endeavours to preserve existing public rights of way as much as possible. Unfortunately, some diversions and stopping up of public rights of way would be inevitable but users would no longer be trying to cross the A358 at grade, making the public rights of way network safer and more inclusive.</p>	Yes
61	467	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	I haven't really got any views on this at present. The usual excavations and disposal of soil seemed to be explained in the documents.	National Highways acknowledges this comment.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
62	467	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	This will damage the environment beyond repair in the long term. Precious country side, historical sites wildlife, birds and habitats that they inhabit will be gone unlikely to return. reading between the lines in this report.	National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.  As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).	Yes
63	467		A project to far that will damage communities and countryside This road scheme will be very costly to implement cause especially at the Somerfield roundabout end. The route to the M5 junction 25 will cut off many roads to local villages all along the route forcing then more isolation from various communities, local village traffic will have to travel further to access the new road system and get back to local villages, business on return causing more pollution etc. not to mention the damage to local countryside with mass amounts of extra tarmac on the proposed routes. Total rethink needed.	National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.  As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).  The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).  The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes
64	469	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	If the access to the A358 is being closed how does all the traffic that uses this entry currently get access to Bickenhall— it looks like it is envisaged that they use a local road that is proposed to be build as a so-called Stewley access to the A358. This involves building access via Park Barn Lane to the North of the A358. This road is currently a dead end and therefore attracts very little traffic and you are proposing to drive all traffic from surrounding villages which currently have direct access to the A358 via this route.	Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.  This change has been made to discourage alternative routes through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane.  As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.  To get to Bickenhall from Southfields roundabout with the scheme in place, it is recommended you travel up the dualled A358 to Ashill junction, drive through Ashill and onto the section of the existing A358 retained for local access, then turn left at Staple Fitzpaine Road.  To get to Bickenhall from M5 junction 25 with the scheme in place, it is recommended you take the dualled A358 to the Mattock's Tree Green junction, then take Ash Road and Higher West Hatch Lane.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
65	469	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	As above the closure of access to the A358 will drive the traffic to the Stewley link envisaged to be built to join Park Barn Lane which will drive large amounts of traffic past the residents at Park Barn Lane.	<p>The proposed A358 design includes a link between Ashill junction and Stewley, referred to as the Stewley link road. This link is proposed to reduce the severance of Stewley and to ensure Stewley's residents have access to the A358. The Stewley link road will not be used by through traffic, because traffic heading south from places like Hatch Beauchamp will use an alternative route using the Village Road overbridge and part of the existing A358 retained for local access. The Stewley link road's alignment does not include any part of Park Barn Lane and Park Barn lane will remain a local access only road. No change in traffic is anticipated down Park Barn Lane as a result of the scheme.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the detailed design of the local roads mitigation will continue in the next design stage, should the Development Consent Order be granted successfully.</p>	Yes
66	469	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	This proposal looks to push all traffic from villages to the A358 by a road linking Stewley to Park Barn Lane, which pushes all local traffic to a road (Park Barn Lane) which currently only has traffic principally related to the few houses that are on that road.	<p>The proposed A358 design includes a link between Ashill junction and Stewley, referred to as the Stewley link road. This link is proposed to reduce the severance of Stewley and to ensure Stewley's residents have access to the A358. The Stewley link road will not be used by through traffic, because traffic heading south from places like Hatch Beauchamp will use an alternative route using the Village Road overbridge and part of the existing A358 retained for local access. The Stewley link road alignment does not include any part of Park Barn Lane and Park Barn lane will remain a local access only road. Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
67	469	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Park Barn Lane is being used as a funnel for the village traffic to the North of the A358 with a new road that is being envisaged to join Park Barn Lane next to the 4 properties that are on that road. This then cuts across a field in front of the properties— why does this road cut so close to the properties and not follow close to the existing A358— it would need to be newly built so why drive so much traffic around these properties from surrounding villages. They additionally have the main junction being built diagonally opposite them. This proposal is creating a massive junction for what purpose ? The main blocking point of the A358 at this point is tailback from the Southfields roundabout which blocks as traffic tries to move to the A303 which is principally a single carriageway causing a bottleneck and often tailback.	<p>Following statutory consultation the alignment of Stewley Link has been brought closer to the existing A358 alignment. The position of the junction of Stewley link has been determined as it provides optimum sight distance onto Ashill overbridge. Its location also ensures minimal conflict &amp; strange manoeuvres from the off slip onto Stewley link. The radius of the curve on Stewley Link is at a minimum and cannot be reduced further. Hence the link cannot be brought closer to the mainline A358.</p> <p>Ashill junction has been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS 3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p>	Yes
68	469	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	This drives all village traffic on the North of the A358 through this route by blocking off access to the A358 from all local roads. This would require a new road to be built which is envisaged to cut onto Park Barn Lane by the properties that are built on this road. Why? Why not follow the main A358 carriageway instead of driving traffic round these properties when currently they are on a dead end road which has very little traffic.	<p>The proposed A358 design includes a link between Ashill junction and Stewley, referred to as the Stewley link road. This link is proposed to reduce the severance of Stewley and to ensure Stewley's residents have access to the A358. The Stewley link road will not be used by through traffic, because traffic heading south from places like Hatch Beauchamp will use an alternative route using the Village Road overbridge and part of the existing A358 retained for local access. The Stewley link road's alignment does not include any part of Park Barn Lane and Park Barn lane will remain a local access only road. No change in traffic is anticipated down Park Barn Lane as a result of the scheme.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads , National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the detailed design of the local roads mitigation will continue in the next design stage, should the Development Consent Order be granted successfully.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
69	469	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	I disagree with the need for a junction at this point which is causing these parallel roads to be built.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to proposals in principle.	Yes
70	469	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	I disagree with the need for a junction at this point which is causing these parallel roads to be built.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to proposals in principle.	Yes
71	469	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	How many people do you envisage using this ? Is this being created at the expense of blighting the lives of the residents that live along this route ?	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to proposals in principle.</p> <p>The proposed offline cycle route uses lightly trafficked roads and traffic-free tracks and allows cyclists to pass through places of interest. Future demand for cycling based on the Propensity to Cycle tool forecasts a demand of 32 cyclists a day on a typical mid-section of the route although numbers would be more than this towards Taunton and Southfields, where the cycle route approaches the urban areas and housing/jobs. Whilst improved facilities associated with the signed route should release latent demand and further increase the number of people using the cycle route, cyclists would still be few in number and represent a small proportion of the total traffic flow.</p> <p>The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p>	Yes
72	469	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	A waste of money incurred to date and to be incurred in the future without amendments to the A303 from Southfields Roundabout.	The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three lane approach from the A303 (East), a three lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicates that it will operate within its practical capacity in the design year (2046) even during peak hours.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
73	478, 566, 1210		Request for noise mitigation Having seen the purposed video I live next to the 358 and notice that the new road is going to be quite high above the old road. The noise factor is going to be much higher than now (Which is bad enough) Could you please think about putting a sound barrier next to the edge of the new dual carriage way so that my neighbours and I won't be blasted out all day and night. Many thanks I hope you will take this into consideration	The scheme would include low noise surfacing. In addition, as informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of acoustic bunds and barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement Chapter 2 The project and within Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).  In this location, the road is moving away from properties. Combined with the effect of the low noise road surface, this has resulted in neutral or beneficial noise impacts for these properties, compared with the existing situation.	Yes
74	478, 566, 1210		The bridges at either end of my paddock are in use daily. If bridges are removed and not replaced myself and my neighbour will be unable to use our land!! Rendering it useless.	The two bridges at the end of the PIL's paddock would not be affected by the scheme. National Highways have met with PIL 478 on 27 July 2023 to discuss the proposals and the impact the scheme has on their property. The reason for these bridges being within the scheme boundary and the proposed land take type was explained. Temporary acquisition with permanent rights has been proposed to allow access for hedgerow maintenance.	N/A
75	478, 566, 1210		The 358 works well. It is the roundabouts at either end which need improving queues each way to Ilminster and Taunton in the summer 4 miles long. We the locals do not venture out from Thursday - Tuesdays. Should be making the new road down the 303 which has already many dual carriageways.	The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.  National Highways acknowledges the comment. The section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.	N/A
76	487		The Official Custodian only holds title on behalf of a charity. See the below links for further guidance: The Official Custodian for Charities' 'land holding' service (CC13) - GOV.UK (www.gov.uk) Transfer charity land or property to the Official Custodian - GOV.UK (www.gov.uk) The Commission does not use or manage the land that is vested in the Official Custodian for Charities, therefore, National Highways must contact the charity directly. Without more detailed information, we are unable to confirm which charity this letter concerns.	National Highways acknowledges this comment.	Yes
77	494	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	The current situation with regards flow and volume of traffic into the existing infrastructure is unsustainable.	National Highways welcomes support for the proposals.  Somerset County Council (as were) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes.  As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
78	494	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Once completed this section of Stoke Road and Greenway Lane should be designated as a 20mph residential zone. Further details regarding initiatives to discourage the use of this area as a "rat run" would be welcomed at the earliest opportunity.	As a result of the Ash Road realignment, there is now forecast to be a small increase in the forecast traffic on Haydon Lane and parts of Stoke Road as a result of the scheme. It should be noted that the magnitude of this increase is small. As a result of this increase, National Highways has amended the design to include a number of passing places on Haydon Lane to enable vehicles to use the lane safely and localised widening on part of Stoke Road.	Yes
79	494	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Further details on managing the closure of Greenway Lane junction with the existing A358 are required. I am concerned that if this is not done early on in the project then the volume of rat run traffic will increase.	National Highways is committed to keeping the A358 open to traffic during construction and will seek to minimise disruption while maintaining highway safety. The Environmental Management Plan (Document Reference 6.4, Appendix 2.1) and Construction Traffic Management Plan (Document Reference 6.2, Appendix 2.1, Annex B) set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highways authority, Somerset Council, to identify and manage any potential mitigation measures required.  Phasing of the works depends on a number of factors and will be optimised for delivery of the scheme as a whole.  Should the application be approved, the contractor will produce an updated Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) as part of the detailed design stage. This would plan the construction phasing, which would be in discussion and agreement with Somerset Council.	Yes
80	494	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	I would like to see an area of land adjacent to Musgrave Farm House designated as a "Village Green" to facilitate local community gatherings.	National Highways acknowledges this comment. The designation of spaces, such as village greens, is the responsibility of the local authority and not within the scope of this project.	Yes
81	494	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Insufficient detail as to the volume of traffic that will be encountered to make a comment at this stage. In principle I agree with the idea.	National Highways welcomes support for the proposals. The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes
82	505	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the	Road will help through traffic move out of the area and reduce traffic jams.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		reasons for your response			
83	505	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Whilst it will not be a positive change for the residents of lower Henlade, a bridge here will reduce local traffic build up	National Highways welcomes support for the proposals.	Yes
84	505	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Whilst the change to the local landscape will be considerable the reasons for building the road seem sound and will benefit the wider community	National Highways welcomes support for the proposals.	Yes
85	505	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	The proposals seem to address the needs of the local population as well as improve the main road to the A303	National Highways welcomes support for the proposals.	Yes
86	505	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	The proposals maintain access for these businesses	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
87	505	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	It appears to be well thought through and will solve many local access issues	National Highways welcomes support for the proposals.	Yes
88	505	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	No this area is outside of the area I travel to often	National Highways acknowledges this comment.	Yes
89	505	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Not an area I know well	National Highways acknowledges this comment.	Yes
90	505	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Most of these roads are quite dangerous and any improvement is very welcome	National Highways welcomes support for the proposals.	Yes
91	513	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	I would have preferred a new junction taking the traffic from the new A358 straight onto the motorway instead of mixing with existing town traffic. Junction 25 is a mess, poorly designed despite recent changes, too many lane changes. The decision not to create a new junction on the M5 was a mistake and it will cause chaos for many years to come	Somerset County Council (as were) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes.  As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
92	513	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	I agree with closing access to Greenway Lane from the new A358 as it is a rat run and not built to carry the amount of traffic that it currently handles. Also, much of the traffic consists of vans and lorries that are too wide for the road. Greenway Lane is a route to the South side of Taunton. It isn't possible to get to Chestnut Drive in any other way except for taking the Ash Road route through Stoke St Mary or going past Junction 25 and travelling along Tone Way before turning off and making your way via Blackbrook. This is a seriously long and busy route. It's no wonder drivers use Greenway Lane.	<p>National Highways welcomes support for the proposals.</p> <p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high-quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with traffic on the A358.</p> <p>Checks on journey times between local villages and both the M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. These show that generally there are reductions in overall journey times due to the much faster speed of the scheme, although some trips have slightly longer journey times. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
93	513	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	My concern about blocking off Greenway Lane is that more drivers will switch to Ash Road and take the road through Stoke St Mary or past Thurlbear Primary School. This consists of narrow lanes and drivers will be a serious risk to school children, cyclists, walkers and horse riders of which there are many. The speed limit along Ash Road is 60 mph and drivers and lorries drive far too fast already. There needs to be a big disincentive to put off drivers from making Ash Road an even worse rat run than Greenway Lane.	<p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows.</p> <p>The traffic modelling undertaken shows that there will be very small changes on most local roads (a change of less than 250 vehicles per direction on a weekday in 2031), although some see a very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Feedback during the 2021 A358 statutory consultation expressing concern about the predicted rise in traffic flow using Ash Road resulted in a design change. This was a realignment of Ash Road to discourage the use of Ash Road as an alternative route between the A358 and Taunton.</p> <p>The modelling of the new proposed A358 scheme design suggests that there will be no notable change in the traffic flow using Ash Road or going through Stoke St Mary, Thurlbear or West Hatch with the proposed A358 scheme in place (a change of less than 250 vehicles per direction on a weekday in 2031).</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
94	513	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	I am very concerned about the slip road that leads to Ash Road. As previously pointed out, closing Greenway Lane will leave drivers seeking new options to get to the South side of Taunton / Taunton race course Corfe, the Taunton and Pickeridge Golf Club and other destinations serviced by the B3170. Ash Road will become the new rat run. It is already a rat run and sometimes when there has been a traffic build up on the existing A358 all the way back to the Nags Head, cars in their droves turn off here and charge down the narrow country lanes desperately trying to get to work on time. These lanes are completely inadequate to take the volume of traffic that will inevitably divert down this lane. Otherwise, I like the plans to service Langport, to create a link to the current A358 and also to provide access to the Huish Woods Scout Camp (currently, to get to the Scout Camp can be dangerous at night, having to cross the A358 with fast flowing traffic coming down the hill).	<p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows.</p> <p>The traffic modelling undertaken shows that there will be very small changes on most local roads (a change of less than 250 vehicles per direction on a weekday in 2031), although some see a very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Feedback during the 2021 A358 statutory consultation expressing concern about the predicted rise in traffic flow using Ash Road resulted in a design change. This was a realignment of Ash Road to discourage the use of Ash Road as an alternative route between the A358 and Taunton.</p> <p>The modelling of the new proposed A358 scheme design suggests that there will be no notable change in the traffic flow using Ash Road or going through Stoke St Mary, Thurlbear or West Hatch with the proposed A358 scheme in place (a change of less than 250 vehicles per direction on a weekday in 2031).</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
95	513	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	I particularly like the link to Huish Woods Scout Campsite as previously explained, the junction into the Scout Campsite from the current A358 and coming from the Taunton to Southfields direction is dangerous, especially at night time.	National Highways welcomes support for the proposals.	Yes
96	513	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	I often visit friends who live in Hatch Beauchamp and, when returning, I need to take narrow lanes in order to get back onto the Langport Road to approach the A358 at the traffic lights at Mattock Tree Junction. This is the safest way but it still means travelling down very narrow lanes. The proposed new road will solve this issue.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
97	513	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	The existing junction between Bickenhall Lane and the current A358 is dangerous especially if it involves crossing the road. A bridge is an excellent idea.	National Highways welcomes support for the proposals.	Yes
98	513	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Cycling and horse riding are particularly popular around the area I live which is Ash Road. There are many walkers also. My current concern is the volume and speed of traffic along Ash Road. The creation of dedicated cycle routes that can be used by all is to be welcomed. If I wish to cycle into Town, I cannot use the current A358 (or perhaps dare not use it). This means cycling down Creech St Michael and diverting to the canal path. Or travelling through Stoke St Mary which involves a number of steep hills. Therefore, a cycle route that goes alongside the current A358 is an excellent idea.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the scheme and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4) and show that there would be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Ash Road is discounted from the mitigation proposals because it shows a decrease in traffic flows as a consequence of the scheme. Walkers, cyclists and horse-riders on Ash Road should not be disadvantaged with the scheme in place.</p> <p>The scheme includes an alternative offline cycle route that uses lightly trafficked roads and traffic-free tracks, utilising existing infrastructure and allowing cyclists to pass through places of interest. Cycling would not be prohibited on the new dual carriageway based on the classification of the road. National Highways anticipates that the signed cycle route and local roads would be more attractive than the scheme to the majority of walking, cycling and horse-riding users.</p> <p>Throughout the development of the scheme, one of our aims is to enhance access for walkers, cyclists and horse-riders who use the route. The scheme seeks to provide an offline cycle route that would serve cyclists in the local communities, giving people the opportunity to get out of their cars and onto bicycles for local journeys. It would connect to the local road network and the Sustrans national cycle network and includes new off-road routes. The scheme would provide 19 new public rights of way: seven footpaths, three bridleways and nine restricted byways. Four new traffic-free or very lightly trafficked bridges would be provided.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
99	513	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	My immediate concern would be about the use of Ash Road as a rat run if the current A358 had to be shut for any length of time.	<p>National Highways is committed to keeping the A358 open to traffic during construction and will seek to minimise disruption while maintaining highway safety. The Environmental Management Plan (Document Reference 6.4, Appendix 2.1) and Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highway authority, Somerset Council, to identify and manage any potential mitigation measures required.</p> <p>Phasing of the works depends on a number of factors and will be optimised for delivery of the scheme as a whole.</p> <p>Should the application be approved, the contractor will produce an updated Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) as part of the detailed design stage. This would plan the construction phasing, which would be in discussion and agreement with Somerset Council.</p>	Yes
100	513	Do you have any other comments you would like to make about our proposals?	I hope that noise reducing road surfaces will be utilised to mitigate the large volume of traffic that will use the new A358. My belief is that once the dualling project has been completed from the M3 to the M5, the volume will increase hugely. Currently, drivers from London or going to London have to choose either the M4/M5 route or the A303/A30 or the A358 alternative. Many choose the M4 / M5 way because of the persistent hold ups around Stonehenge. Once that hurdle has been crossed, the volumes using the A303 /A358 will dramatically increase. This is another reason why there should have been a totally new junction from the A358 to the M5.	<p>The scheme will include low noise surfacing. In addition, as informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement Chapter 2 The project and within Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barrier are shown on Environmental Statement Figure 7.8 Environmental Masterplans (Document Reference 6.3).</p> <p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Environmental Statement Chapter 3 Assessment of alternatives (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>Somerset County Council (as were) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes.</p> <p>As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. Note that future schemes such as the A303 Sparkford to Ilchester and A303 Amesbury to Berwick Down have been included as part of the modelling. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
101	535	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	We would like consideration given to signage indicating "local services" giving people advance notice of Thornfalcon Garage for fuel and shop facilities. Access to us will be off the new junction whereas at the moment it is right next to the existing route.	<p>National Highways met with PIL 22 on 10 June 2022, during the supplementary consultation period to discuss the scheme and the impact it would have on their business. Following feedback received at this meeting the scheme boundary was reduced in this area to reduce the impact on their business. The process for applying for signage was explained to PIL 22 and that this will not be required until a later design stage.</p> <p>Following supplementary consultation the scheme boundary was increased within this area to allow for a right of access during construction and maintenance of the proposed National Grid pole. National Highways contacted PIL 22 on 4 September 2023 to explain the proposed changes to the scheme boundary.</p> <p>A signage strategy will be prepared at detailed design stage if the Development Consent Order is granted, including, for example signage on the new A358 and the link roads at Mattock's Tree Green to direct traffic to local services.</p>	N/A
102	535	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response.	As an existing long standing business this is the best of the three options that were originally being discussed.	National Highways acknowledges the range of views expressed, including those received in support of the proposals.	N/A
103	535	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response.	Necessary for local residents to access Thornfalcon Garage.	National Highways acknowledges the range of views expressed, including those received in support of the proposals.	N/A
104	535	Do you have any other comments you would like to make about our proposals?	Much consideration must be given to ensuring that local businesses such as Thornfalcon Garage are not adversely affected. This site employs in excess of 40 people and is longstanding (over 100 years) and continuity of these businesses is vital.	<p>National Highways have met with this landowner to discuss the scheme and the impact it would have on their business.</p> <p>The proposed scheme aims to facilitate greater connectivity between M5 junction 25 at Taunton and the A303 Southfields roundabout at Ilminster, and this is beneficial in terms of accessibility for local businesses along the proposed route. The beneficial and adverse effects of the scheme on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2). A signage strategy will be prepared at detailed design stage if the Development Consent Order is granted, including, for example signage on the new A358 and the link roads at Mattock's Tree Green to direct traffic to local services.</p>	N/A

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
105	537	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Although I disagree with the route I think that the bridge will help as it will provide access	National Highways welcomes support for the proposals.	Yes
106	537	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	As an owner of Ashe farm we cannot see how the red line outline will work and not limit our access to the property. We also worry about the aesthetic effect of storing raw materials or machinery along the route.	National Highways have continued to engage with this landowner to explain the scheme boundary impacts on their landholding. National Highways have provided plans showing how access will be maintained once the scheme is complete.	Yes
107	537	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	I think that the route could go down the existing A358 to where the junction is now then have a small bridge at the junction.	National Highways now proposes a new junction and link road that would provide access to the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm Units from the Mattock's Tree Green junction. A bridge connecting over the proposed A358 mainline would not be feasible due to constraints such as the existing Somerset Progressive School. Such a structure would impact the school and entrance as the A358 is mostly at its existing level, so a link over would require extensive work to ensure appropriate headroom, thus greatly effecting the school.  The proposed solution ensures connectivity to the A358 via the all-movements junction to allow access to all areas around the scheme.	Yes
108	537	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	How will the drainage work off the hill.	As set out in Environmental Statement Chapter 13 Road drainage and the water environment (Document Reference 6.2), appropriate assessment and flood modelling work has been undertaken to inform the design of the road drainage system. This has determined the size of attenuation needed to store excess surface water generated by the hard road surfaces. These attenuation basins will then allow water to flow into the local rivers at a controlled rate once they have returned to normal level. The drainage design of the scheme is to modern standards and accounts for the extremes in rainfall and potential increases in rain storm intensity and volumes as a result of climate change.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
109	537	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	Effect on the owls with the increased traffic with trees.	<p>The proposals have been informed by extensive ecological surveys which have fed into the Environmental Impact Assessment (EIA) process. A mitigation hierarchy approach has been applied to the scheme design; seeking firstly to avoid or reduce adverse effects on valued ecological features and then to mitigate those which cannot be reduced. Where impacts upon protected species and habitats have been identified, specific mitigation strategies have been developed and agreed with Natural England; these are included within the Environmental Statement (Document Reference 6.2) submitted within the DCO application.</p> <p>Large areas of habitat creation are included within the scheme as replacement for those habitats lost to construction. These areas of habitat creation would include plant species of local provenance, in keeping with the character of the local landscape, and of benefit to biodiversity. Furthermore, habitat creation areas have been designed to, once established, improve ecological connectivity through the local landscape along the A358, by connecting up existing parcels of semi-natural habitats. In recognition of the time required for created habitats to provide an equivalent biodiversity value to those lost, larger areas of habitat would be created in comparison to those lost to ensure a net increase in habitat area. As detailed within the Environmental Management Plan (Document Reference 6.4, Appendix 2.1) submitted within the DCO application, these habitats would be subject to long-term management and monitoring to maximise the outcomes for biodiversity.</p> <p>We note your concern over the potential for the scheme to impact natural habitats and wildlife. As part of the preliminary design, we have sought to provide replacement habitat along the route and the Environmental Statement (Document Reference 6.2) describes the mitigation measures we have adopted. This shows that whilst we would lose woodland, we would replace with both semi-natural broadleaved woodland and open woodland both across and in close proximity to the route. The same occurs for hedgerow and grassland where significant increases are proposed. Environmental Statement Figure 7.8 Environmental Mitigation Plan sets out the planting and landscaping proposals for the scheme, whilst an assessment of the effects of the scheme on wildlife and habitats is set out in Environmental Statement Chapter 8 Biodiversity.</p>	Yes
110	538	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Not confident that commuter traffic will be eased.	The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes
111	538	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Me and my family rely on access to Langport Road and Hatch Beauchamp.	<p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with traffic on the A358.</p> <p>Checks on journey times between local villages and both M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. These show that generally there are reductions in overall journey times due to the much faster speed of the scheme, although some trips have slightly longer journey times. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
112	538	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	I have family in Mill Lane and my Pastre Farms at Palmers Green, both in Hatch Beauchamp. I need regular access and local roads will be essential for me.	<p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with traffic on the A358.</p> <p>Checks on journey times between local villages and both M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. These show that generally there are reductions in overall journey times due to the much faster speed of the scheme, although some trips have slightly longer journey times. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
113	538	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	I regularly use Staple Fitzpaine Road to take my daughter and son to school. Bickenhall Lane is way too narrow. Why are you not using the wider road which will accommodate traffic much better than Bickenhall Lane? No sense to me!	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.</p> <p>An overbridge has been provided at Staple Fitzpaine Road (Village Road overbridge)</p>	Yes
114	538	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Required for essential local access.	National Highways welcomes support for the proposals.	Yes
115	538	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Preference for Option 1. Reason: I use Stocks Lane to get to my family, it is not an easy or pleasant journey. If you meet someone in the lanes who cannot reverse, you can sometimes end up going back several homes. I regularly need to get to Capland from Hatch Beauchamp and option 1 is the most practical and sensible choice.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
116	538	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Required for essential local access.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
117	538	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	Farm access Flooding is a problem along Mill Lane to Palmers Green and this often makes the road unpassable. My Partner needs access with farm equipment from Hatch Beauchamp to Capland and therefore option 1 is essential for him. He cannot use Stocks Lane as the equipment is too wide.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
118	538	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Local access Essential for us to retain local access. Living in Ashill and having a business and family in Hatch Beauchamp, I rely on local roads to move around.	National Highways welcomes support for the proposals.	Yes
119	538	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	Required for local access.	National Highways welcomes support for the proposals.	Yes
120	538	Do you have any other comments you would like to make about our proposals?	We are hugely affected by the proposals. Living in Ashill, close to the A358 we will be affected by noise and probably a big increase in local traffic. We farm in Hatch Beauchamp, Capland and Ashill and local connectivity is essential critical to us is you choosing option 1, to link Hatch Beauchamp to Capland. Please choose this option as this is the most practical solution.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
121	539	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Ilminster Road There are still only two lanes in to Taunton. I am not confident that at busy commuter periods, that the bottle neck currently experienced, will be eased. Have you considered opening the old Ilminster Road?	The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).  The potential of opening the bus only road link at Old Ilminster Road (off Blackbrook Park Avenue) to general traffic has been discussed with Somerset Council as the local highway authority responsible for that part of the road network. This has been rejected by Somerset Council on the basis that the bus only link is an essential component of bus priority measures in the town that would be lost if the road were to be shared with wider traffic flows.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
122	539	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	Local access As a resident of Hatch Beauchamp it is very important that we have local roads access and connectivity.	National Highways acknowledges this comment.	Yes
123	539	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	Bickenhall Lane is very narrow, the bridge would be better placed at Staple Fitzpaine where the road is wider, to accommodate local traffic.	Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.  This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.  An overbridge has been provided at Staple Fitzpaine Road (Village Road overbridge).	Yes
124	539	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Required for local access.	National Highways welcomes support for the proposals.	Yes
125	539	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Preference for Option 1. Reason: I am a farmer living in Hatch Beauchamp with land at Capland and Ashill. I am unable to use Stocks Lane with my equipment. It is critical that I am able to get local access to my land. Option 2 or 3 will mean additional traffic through Mill Lane down to Palmers Green which floods whenever we have heavy rain. Increased traffic will cause a danger to local residents.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
126	539	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Essential for local access and connectivity.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
127	539	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	Option 2 and 3 should not be a consideration. Additional traffic from both Stocks Lane and also in the other direction from Mattocks Tree Green, will result in danger to Hatch Beauchamp residents. Vehicles will be passing residential properties, local school, pub and recreational areas. Option 1 is the only safe and sensible option.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
128	539	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	This is essential for local access.	National Highways welcomes support for the proposals.	Yes
129	539	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	Required for local access.	National Highways welcomes support for the proposals.	Yes
130	539	Do you have any other comments you would like to make about our proposals?	Option 1 to connect Village Road to Capland is a critical factor. I am a farmer who lives in Hatch Beauchamp with land at Capland and Ashill. I cannot use Stocks Lane with my equipment. The lanes are too narrow. The road between Mill Lane and my farm at Palmers Green regularly floods. Additional traffic will not be able to get through, it will be a nightmare. Also, the additional traffic passing through will be extremely dangerous for local residents.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
131	543	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Not sure if the current commuter congestion will be eased. Still only two lanes into Taunton after motorway.	The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
132	543	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	I need access to Langport Road and to Hatch Beauchamp.	National Highways acknowledges this comment.	Yes
133	543	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	I farm in Hatch Beauchamp and have land at Capland and Ashill. I need to have access and connectivity to all local roads to get to work and home.	<p>This land is outside the scheme boundary and access to the land will not be impacted by the proposals.</p> <p>Traffic traveling between Hatch Beauchamp and Capland can use the proposed Capland link between Village Road and Capland Lane, included as part of the A358 design after feedback from the 2021 statutory consultation.</p> <p>Traffic travelling between Hatch Beauchamp and Ashill can travel along Village Road south, cross the A358 using the Village Road overbridge, then continue south along a section of the existing A358 retained for local access to the Old A358 that goes through Ashill.</p>	Yes
134	543	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	Bickenhall Lane is a very narrow road. A bridge would be better placed at Staple Fitzpaine Road where the road is much wider.	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.</p> <p>An overbridge has been provided at Staple Fitzpaine Road (Village Road overbridge).</p>	Yes
135	543	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Required for local access.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
136	543	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	As a farmer needing constant access to Capland from Hatch Beauchamp. I cannot go through the lanes at Stocks Lane due to it being so narrow. Option 1 is the option option for me to get access to my fields. Any other option is not practical or will adversely affect me and my business with additional costs and time. Also, option 1 is the safest option for all.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
137	543	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Required for local access.	National Highways welcomes support for the proposals.	Yes
138	543	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	As a local user of the lanes. I can tell you that option 2 and 3 will end causing big problems in the area. The lanes are too narrow plus Mill Lane to Palmers Green floods regularly and this seems to have been overlooked! Option 2 and 3 are also very dangerous options-- I urge you to listen to local knowledge and choose the only sensible option which is option 1.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
139	543	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Essential for local access-- I live in Ashill so will rely on essential connectivity to Hatch Beauchamp and Stewley.	National Highways welcomes support for the proposals.	Yes
140	543	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	Required for local access.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
141	543	Do you have any other comments you would like to make about our proposals?	I am affected hugely by your proposals living next to the A358 in Ashill, noise will become a huge issue. I farm locally with fields in Ashill and Capland and Hatch Beauchamp. Therefore, I rely on local roads. Take it from me, Stocks Lane will not be able to cope with the additional users. Mill Lane is not suitable due to flooding. Please choose option 1 as any other option will cause huge problems for all concerned.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
142	544	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	There is no improvement. Your 'designers' are simply repeating the original problems. I.e. nexus is traffic light controlled. A dual carrageway ending in a set of traffic lights is good design?	National Highways has undertaken traffic modelling to assess how the Nexus 25 roundabout would operate under future conditions with different forms of junction. The results shows that the proposed changes to the Nexus 25 junction are necessary to provide additional capacity to cater for the increased traffic volumes that are forecast to travel along the A358 with the scheme in place, and that a signalised junction best accommodates this traffic. A signalised crossroads allows for at-grade pedestrian crossing facilities to be incorporated. A signalised junction allows for the operation of the junction to be linked to M5 junction 25 to ensure effective operational performance of both junctions.  Somerset County Council (as were) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes.  As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes
143	544	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Why? If the road was designed correctly this would not be needed?	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.  The bridge at Stoke Road has been included in the scheme design to ensure the local road can remain open and retain connectivity across the new route between Henlade and Lower Henlade.	Yes
144	544	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	What a mess just missed opportunities.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
145	544	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know	This is just not needed there is no problem with the road as is.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		the reasons for your response			
146	544	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	See above just a waste of money.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
147	544	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	Just leave as is	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
148	544	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	So you are putting all the traffic/walkers horse riders onto a small lane in the name of safety	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
149	544	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	This section of road has no problems as is	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
150	544	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	preference for Option 2. Reason: It is clear you do not understand what you are doing Only minor flood improvements required in ONE location only.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
151	544	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	This is just not required	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
152	544	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	This section of road has no problems and should be retained as is.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
153	544	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	What a mess.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
154	544	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Leave as is	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
155	544	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	Leave as is	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
156	544	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	Leave as is	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
157	544	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	This section only get congested due to the poor design of Southfields rbt your plans do not offer any significant improvements.	<p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East), a three lane approach from the A303 (East), a three lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicates that it will operate within its practical capacity in the design year (2046) even during peak hours.</p> <p>Southfields roundabout design has been further amended following consultation feedback in order to maximise road safety and further enhance capacity of the junction. These changes are an increase in the length of the parallel merge layout to the A303 eastbound from the segregated left turn lane at the roundabout, and the widening of the A358 (West) approach between Ilminster Services and the roundabout.</p> <p>Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS 3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p> <p>National Highways acknowledges support for the scheme excluding the section between Thornfalcon and Southfields. However, that section is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
158	544	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	What put them on local roads along with all the cars going to be a lot safer.	Proposals for walkers, cyclists and horse-riders and improved connections as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (Environmental Statement Appendix 2.1 Annex F, Document Reference 6.4).	Yes
159	544	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	This should be stopped the consultation is flawed and the need for this road should be reassessed.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
160	544	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	So you are going to cause major damage to a sensitive environmental area for not a lot of gain the information for mitigation of damage is at best laughable.	National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.  As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).	Yes
161	544	Do you have any other comments you would like to make about our proposals?	The road scheme is not required the need for it dates back before Covid 10 and the climate crisis:- with the country going carbon neutral by 2030 there is not a car that can travel to Cornwall from London without recharging traffic levels will fall mid-century put this on hold until you can show the need for it then.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
162	551	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Nexus roundabout will have to be upgraded to take account of the Henlade bypass. I would have thought that the recent works would have taken account of this. Total lack of planning!	<p>National Highways has been liaising closely with Somerset Council (formerly Somerset County Council) during the development of the scheme. Somerset County Council were granted planning approval for the M5 junction 25 improvements, which included the new Nexus 25 roundabout, in March 2018. In early 2018 the A358 Taunton to Southfields Dualling Scheme (the scheme) consulted on route options.</p> <p>Prior to that approval and in January/February 2018, the 'Pink' option was considered to be the best performing, and it included a direct connection from the A358 to a new motorway junction south of junction 25. Somerset County Council therefore reasonably assumed in their design of the M5 junction improvements that the scheme would be constructed in line with the 'Pink' option, as that was the most likely configuration of the scheme at the time.</p> <p>Following options consultation in January/February 2018 the affordability of the scheme and the impact on public open spaces was reviewed by National Highways and the direct connection to a new M5 junction was removed from the scheme. This resulted in the 'Pink Modified' option, which was announced as the preferred route by National Highways in June 2019.</p> <p>In the meantime, Somerset County Council had already appointed their contractors for the construction of their M5 junction 25 improvements in February 2019 and the construction work began in July 2019.</p> <p>Any delay to the more advanced M5 junction 25 works to take into account the change from the A358 arrangement proposed in the 'Pink' option to 'Pink Modified' option would have been unreasonable at that time and could have jeopardised that important project.</p> <p>The proposed design change to have the Nexus 25 junction as a signalised junction would better accommodate a crossing of the A358 for walkers and cyclists. The proposed signalised crossing would provide adequate capacity for the predicted traffic flows and allow more control over traffic movements by linking the operation of the signals to those at the M5 junction 25 roundabout and Taunton Gateway Park and Ride. The signalised crossing is incorporated into the timings and has no significant effect on the time given to vehicle traffic.</p> <p>There is no significant difference in the amount of delay between a signalised Nexus 25 junction versus an enlarged roundabout arrangement during typical peak period operation. The signalisation allows better control of traffic flows, and accommodation of tidal movements into and out of the Nexus 25 employment site at different times of day.</p> <p>National Highways has undertaken operational modelling of all junctions along the A358 corridor, including the upgraded Nexus 25 junction. These confirm that all junctions along the A358 will operate within their practical capacity in the forecast situation, with the upgraded A358, and full build out of local developments such as the Nexus 25 employment site. As part of this process forecast queue lengths at all junctions have also been reviewed to ensure that there are no operational or safety concerns. The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
163	551	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Essential for communities living to the south of the new road	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
164	551	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Excessive amount of screening shown on the fly thru.	National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.	Yes
165	551	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	This is the only way that the A378 can access the new road. Also it will provide a link to Ash Road with onward connection to Thurlbear, Slough Green and West Hatch	National Highways welcomes support for the proposals.	Yes
166	551	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	Important because it will provide access not only for Hatch Beauchamp but for other communities such as Ashill and Staple Fitzpaine.	National Highways welcomes support for the proposals.	Yes
167	551	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	Suggest that a footpath/bridleway be provided from the Progressive School to West Hatch Lane. In order to construct the additional lane at the Griffin Lane flyover I would anticipate that improvements would be required to widen Griffin Lane for construction vehicles. It would be sensible to extend these through to West Hatch Lane.	As an outcome of consultation, the scheme now includes a new highway that would connect the Scout Camp link and West Hatch Lane. The new highway would be lightly trafficked and suitable for walkers, cyclists, horse-riders and carriage drivers.  There are no works proposed to Griffin Lane, which would remain a lightly trafficked rural lane.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
168	551	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	This will provide access for all traffic traveling across the new road. The downside will see an increase in numbers passing through Hatch Beauchamp.	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there will be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic will now route via Cold Road and Higher West Hatch Lane to access the junction.</p>	Yes
169	551	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Again, this will increase traffic passing through Hatch Beauchamp. There will be congestion particularly past the Hatch Garage where there are always many vehicles parked. I think that NH should reconsider providing turn on and off access in both directions at the flyover.	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first Road Investment Strategy (RIS1) intention to create a new Expressway corridor into the region, but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>For the A358 to become a high-quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed. As such, all of the direct local road accesses have been removed and access to Mattock's Tree Green junction and Ashill junction are provided.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
170	551	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Preference for Option 3. Reason: No vehicular link is required. But a footpath/bridleway is a necessity.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
171	551	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Provision of turn on/turn off access at the flyover would lessen the need for this link to extend past Windsor Farm.	<p>National Highways acknowledges this comment, however, Village Road will not be provided with a junction on the A358 under the scheme. Traffic modelling of the additional slip roads proposed by the Community of Parishes indicates that they would be very lightly trafficked and would therefore result in benefit to very few users at a cost that would outweigh these benefits. An additional junction would also have additional environmental impacts.</p> <p>The existing A358 carriageway would be used as a local access road past Windsor Farm.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
172	551	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	When this road improvement was first proposed some ten years ago the Highways authority stated that efforts would be made to construct the second carriageway to the south/west of the existing road. This has not been done with various reasons being given mostly relating to the preservation of ancient woodland. I am firmly of the belief that good engineering could change this.	The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.	Yes
173	551	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Necessary for traffic traveling from Stewley in both directions.	National Highways welcomes support for the proposals.	Yes
174	551	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Additions: 1. Provide a bridleway from the Progressive School to West Hatch Lane. 2. Provide a bridleway from Capland Lane to Village Road.	As an outcome of consultation, the scheme now includes new highways at West Hatch Lane and Capland Lane. The highways would connect the Scout Camp link and West Hatch Lane and connect Village Road and Capland Lane (option 1 at consultation). Both of these new highways would be lightly trafficked and suitable for walkers, cyclists, horse-riders and carriage drivers.	Yes
175	551	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	It was stated at the consultation event that fill material for raising levels around Village Road would come from the Mattocks Hill cutting. This will be moved via a haul road so as to avoid construction traffic using the existing road. This will require the Griffin Lane flyover to be constructed early in the scheme. I believe that the haul road could be constructed to the south/west of the existing road and then be used for the new carriageway. It was also stated that the foundations for the piers of the flyovers would not be constructed using driven piles.	National Highways is committed to keeping the A358 open to traffic during construction and will seek to minimise disruption while maintaining highway safety. The Environmental Management Plan (Document Reference 6.4, Appendix 2.1) and Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highway authority, Somerset Council, to identify and manage any potential mitigation measures required.  Phasing of the works depends on a number of factors and will be optimised for delivery of the scheme as a whole.  Should the application be approved, the contractor will produce an updated Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) as part of the detailed design stage. This would plan the construction phasing, which would be in discussion and agreement with Somerset Council.  As part of the supplementary consultation for the scheme a revised main construction compound was put forward. This was located off the A378 close to Mattock's Tree Green. The provision of a temporary	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				bridge over the existing A358 is included in our proposals to significantly reduce the volume of construction traffic that would use the public highway during the works. As well as linking the construction site, which would otherwise be severed by the existing A358, the temporary bridge also links the construction site to the construction compound. The main compound has been sized based upon a resourced programme to deliver the scheme. It is a centralised location and is located close to and with direct access to the temporary bridge. Details of proposed haul roads and proposed compound locations are shown on Environmental Statement Figure 2.1 (Document Reference 6.3).	
176	1203, 708, 552	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Makes sense and will ease traffic flow at this busy junction	National Highways welcomes support for the proposals.	Yes
177	1203, 708, 552	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	The retention of the route via Griffin Lane is essential for local traffic that uses hatch Beauchamp to travel east.	National Highways welcomes support for the proposals.	Yes
178	1203, 708, 552	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	The bridge will allow residents and local users of the roads to continue their lives as before.	National Highways welcomes support for the proposals.	Yes
179	1203, 708, 552	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	I strongly object to option 2 to use Stewley Lane as the link and to any flooding improvements as these would increase the likelihood of my property flooding. No proper cost benefit analysis has been done (which would need to include me taking legal action to the tune of £1m for damages to my home and life). This is a waste of public money when joining the link road via Capland would not necessitate this work.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
180	1203, 708, 552	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	Insufficient thought has been given to the Capland and Stewley Lane proposals. No-one has had the grace to talk to me when my property is so adversely affected. There have been no site visits to find out more about local surface and ground flooding which is essential.	<p>National Highways have continued to engage with this landowner and take on their feedback. A member of the drainage team has spoken specifically to them to understand their concerns and explain the commitments around flooding the project has to adhere to.</p> <p>Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.</p> <p>A Flood Risk Assessment (FRA) has been prepared (see Environmental Statement Appendix 13.1, Document Reference 6.4) in compliance with the National Planning Policy Framework to assess the potential impact of the scheme on local flood risk and provides a description of mitigation measures to offset any potential changes. The FRA considers flooding from rivers and streams, groundwater, surface water and infrastructure failure.</p> <p>The FRA has been informed by Environment Agency flood risk mapping, British Geological Survey (BGS) Groundwater flood mapping and fluvial hydraulic modelling carried out specifically for watercourses affected by the scheme.</p> <p>The FRA has not identified any significant impacts on flood risk as a result of the proposed scheme.</p>	Yes
181	1203, 708, 552	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Far too costly to use Stewley Lane and grossly disadvantageous to Stewley Lane residents (as set out in 3c answer), therefore strongly disagree with parallel road between Stewley and Ashill junction-- Capland to Ashill is a better and cheaper option in the long term.	National Highways acknowledges the range of views expressed including concern around impact on local people. The proposals aim to address the traffic issues and long delays currently experienced along the route and to improve traffic flow, safety and connectivity for local residents and other road users. The beneficial and adverse effects of the scheme on the local community are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2) submitted within the DCO application.	Yes
182	1203, 708, 552	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	As I object strongly with some sections of the proposals, I cannot comment on the phasing.	National Highways acknowledges this comment.	Yes
183	1203, 708, 552	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	The pink route was my preferred option for the new dialled road so the bats in the ancient woodland at Neroche are now protected.	National Highways has undertaken an extensive suite of ecological surveys to inform the Environmental Impact Assessment and identified mitigation measures required to protect wildlife during construction. National Highways has produced an Environmental Statement (Document Reference 6.2) and an Environmental Management Plan (EMP) (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities on the environment, including wildlife, would be managed. This includes species and habitat specific mitigation strategies which detail measures to be taken during both the construction and operational phases of the scheme to protect wildlife.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
184	1203, 708, 552	Do you have any other comments you would like to make about our proposals?	The proposals for Stewley lane have been dropped in at the last minute with insufficient thought or consultation with local Stewley residents. This consultation period is inadequate as has been the planning for this pa-t - poorly done!	<p>National Highways followed Government guidance in the development and delivery of statutory consultation. Notwithstanding the non-statutory engagement and pre-consultation warm up activities set out in Chapter 2 and 6 of the Consultation Report, the 2021 statutory consultation period lasted 41 days, which exceeds the minimum 28 days requirement for Nationally Significant Infrastructure Projects. This provided adequate time for people to prepare for and respond to the consultation.</p> <p>As set out in this report, National Highways considers that consultation was accurate, robust, had an appropriate reach and allowed sufficient time to provide a response, meeting all the required National Highways standards and requirements of the Planning Act 2008 and EIA (Infrastructure) Regulations. As set out in the Statement of Community Consultation (Document Reference 5.1, Appendix 4.4) advice was sought from Local Authorities on how to consult appropriately, to ensure stakeholders and the local community were informed of the consultations and had the opportunity to contribute to them.</p>	Yes
185	553	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	<p>Preference for option 1. Reason: WE STRONGLY OPPOSE A CONNECTING LINK ROAD BETWEEN CAPLAND LANE AND VILLAGE ROAD, for the following reasons: (1) Our house is at the end of Capland Lane nearest to the A358 and a connecting road through to the village would create a rat-run for traffic and turn this quiet, single track lane into a dangerous place for pedestrians, children, horses, cats, dogs and other animals. The only people who drive down the lane at the moment are resident and their occasional visitors. WE WOULD THEREFORE PREFER TO LEAVE CAPLAND LANE AS A DEAD END, WITH JUST A FOOTPATH/BRIDLEWAY CONNECTING THROUGH TO THE VILLAGE. (2) A link road would also be extremely unsightly as currently our view is over trees and farmland. (3) These beautiful fields/farmland would have to be unnecessarily cut up and divided, causing immense difficulty for access by farmers and walkers alike, if a link road to the village went ahead. (4) Our neighbours and ourselves would far prefer to drive any extra distance to access the new dual carriageway rather than have Capland Lane connected to the village by anything other than a footpath/bridleway. (5) The additional noise pollution and fumes created by the traffic on a connecting road from Capland Lane to the village would severely upset, disrupt and interfere with our, and our neighbours', day to day lives as the proposed route would start from immediately the other side of our garden hedge, where currently we have beautiful fields and farmland. (6) My husband and I live in Capland Lane (my husband purchased our house over 30 years ago). In those 30 years, on the occasions of flooding in Stocks Lane and at Stewley, although the road may on occasions not be passable on foot, in my husband's recollection very rarely has there ever been an occasion where the roads have been impassable by vehicle. THEREFORE WE SEE NO REASON FOR CAPLAND LANE TO BE USED AS AN ALTERNATIVE ROUTE IN CASE OF FLOOD.</p>	<p>Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.</p> <p>The scheme boundary does not impact this land and the access to it will be unaffected.</p> <p>The Capland link is forecast to have a very small amount of local traffic using it to access Capland. This lane is not intended to be used as a through route to Ashill junction.</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
186	553	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	If all four lanes of the proposed dual carriageway are sited as planned this will seriously affect the properties at the nearest end of Capland Lane, as the new road would take up most of the land between the current A358 and our property boundaries. Also there would be a considerable pollution aspect. Noise pollution and emissions from cars. Surely there would be less damage done if the lanes were sited at the other side of the current A358?	The new eastbound carriageway is located on this side of the existing for constructability purposes allowing for a traffic management switch from the old to new during construction and also to avoid impacting residential properties and woodlands on the southern side of the existing road.	Yes
187	553	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	(3) We reiterate our request that Capland Lane becomes a dead end.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.  The scheme boundary does not impact this land and the access to it will be unaffected.	Yes
188	553	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	(2) We request a high fence AND fast growing thick trees (Leylandii?) between the dual carriageway and the properties at the nearest end of Capland Lane.	Detailed three-dimensional modelling of noise has been undertaken and noise mitigation in the form of a low noise surface, bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. This includes bunding and a fence on the eastbound carriageway from the junction with Bickenhall Lane to Capland, primarily to protect the community of Hatch Green. A barrier is not proposed for the end of Capland Lane where the proposed scheme will dip down into a cutting providing some natural benefit and a noise barrier is unlikely to be an effective and sustainable solution. With regard to the use of trees to act as acoustic screening to minimise noise, this approach is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of vegetation required, tree planting is not generally adopted as a reliable noise mitigation measure. Other and appropriate noise mitigation measures are set out in Chapter 11 Noise and vibration of the Environmental Statement (Document Reference 6.2).  National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.	Yes
189	553	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	(1) We request a road surface that would ensure the least possible noise	The scheme will include low noise surfacing. In addition, as informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement Chapter 2 The project and within Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barrier are shown on Environmental Statement Figure 7.8 Environmental Masterplans (Document Reference 6.3).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
190	553	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	We would request that there be no intrusion into our existing lanes and that all construction portakabins, machinery etc is sited at least a mile away from any properties.	<p>National Highways is committed to keeping the A358 open to traffic during construction and will seek to minimise disruption while maintaining highway safety. The Environmental Management Plan (Document Reference 6.4, Appendix 2.1) and Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highway authority, Somerset Council, to identify and manage any potential mitigation measures required.</p> <p>Phasing of the works depends on a number of factors and will be optimised for delivery of the scheme as a whole.</p> <p>Should the application be approved, the contractor will produce an updated Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) as part of the detailed design stage. This would plan the construction phasing, which would be in discussion and agreement with Somerset Council.</p> <p>As part of the supplementary consultation for the scheme a revised main construction compound was put forward. This was located off the A378 close to Mattock's Tree Green. The provision of a temporary bridge over the existing A358 is included in our proposals to significantly reduce the volume of construction traffic that would use the public highway during the works. As well as linking the construction site, which would otherwise be severed by the existing A358, the temporary bridge also links the construction site to the construction compound. The main compound has been sized based upon a resourced programme to deliver the scheme. It is a centralised location and is located close to and with direct access to the temporary bridge. Details of proposed haul roads and proposed compound locations are shown on Environmental Statement Figure 2.1 (Document Reference 6.3).</p>	Yes
191	553	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	Basically, I disagree with the whole project and its adverse effect on wildlife and the environment. It would be far wiser to first of all turn the A303 into a dual carriageway. However, this does not seem to be on the cards, so I feel I should limit my efforts to trying to change the areas that can possibly still be altered, in particular voicing my views AGAINST the suggestion of a link road from Capland Lane through to Village Road Hatch Beauchamp. I think it is of the highest importance that fast growing thick trees are planted along the boundary of the new dual carriageway and that a tall fence is also erected as an additional sound barrier, as well as a high bank of earth.	<p>National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.</p> <p>As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p> <p>The scheme include low noise surfacing. In addition, as informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement Chapter 2 The project and within Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barrier are shown on Environmental Statement Figure 7.8 Environmental Masterplans (Document Reference 6.3).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
192	553	Do you have any other comments you would like to make about our proposals?	I really think that the A303 should be turned into a dual carriageway first of all! But with the A358 dual carriageway, I think there will still be a huge build up of traffic at the Southfields Roundabout. It may not stretch so far back, but the traffic jam will be two lanes wide. Same amount of traffic jam, just held up in a different formation! I don't know anybody from around here who thinks the whole project is a good idea.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Road Investment Strat12 (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS 3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
193	557	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	<p>It is essential that the noise attenuation fencing on the proposed section between Stoke Road bridge and Mattocks Tree Green junction is continuous along the southern side of the route past residential properties located off Greenway Lane and, significantly, those properties on Stoke Hill which are raised above the route of the road and will therefore potentially be affected by noise from the new road if it is not properly attenuated. The design of the Mattocks Tree Green junction, with the dumbbell roundabout arrangement is excessive and overengineered. There is no need or justification for the scale of the roundabouts proposed at this junction, particularly on the southern / western side of the junction which only serves very minor back routes and minimal traffic. This part of the scheme is also in close proximity to the Blackdown Hills AONB and is on raised ground. Due to the nature of the scheme designed, the junction will require significant lighting which will have a detrimental impact upon the rural character of this location, the edge of the AONB setting and the ecology (i.e. bats) that are active in this locality. The design as it is will also be very expensive to deliver. As such, the design of this junction should be reconsidered and reduced in scale to limit impacts of this nature and reduce the overall costs of the scheme.</p>	<p>The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of low noise surfacing, cuttings, acoustic bunds and other physical features to reduce noise impacts during operation and best practicable means including some localised noise screening and low vibration plant during construction. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed. The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).</p> <p>Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.</p> <p>National Highways consider the size and scale of the junction is in line with the standards needed for a dual carriageway and appropriate to providing a connection between two A-roads – the A358 and the A378 to Wrantage and Langport – as well as providing local connections for rural villages. The junctions have been designed to permit local traffic and agricultural traffic to join the strategic network in the safest practicable way. Following further traffic modelling, National Highways proposed several design changes to Mattock's Tree Green junction. These would improve access for communities living in West Hatch and Hatch Beauchamp and aim to reduce rat running on local roads.</p> <p>Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, specific lighting specification will be discussed and agreed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.</p> <p>National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
194	557	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Please see response to 1c re the Mattocks Tree Green junction: The design of the Mattocks Tree Green junction, with the dumbbell roundabout arrangement is excessive and overengineered. There is no need or justification for the scale of the roundabouts proposed at this junction, particularly on the southern / western side of the junction which only serves very minor back routes and minimal traffic. This part of the scheme is also in close proximity to the Blackdown Hills AONB and is on raised ground. Due to the nature of the scheme designed, the junction will require significant lighting which will have a detrimental impact upon the rural character of this location, the edge of the AONB setting and the ecology (i.e. bats) that are active in this locality. The design as it is will also be very expensive to deliver. As such, the design of this junction should be reconsidered and reduced in scale to limit impacts of this nature and reduce the overall costs of the scheme.	Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.  National Highways consider the size and scale of the junction is in line with the standards needed for a dual carriageway and appropriate to providing a connection between two A-roads – the A358 and the A378 to Wrantage and Langport – as well as providing local connections for rural villages. The junctions have been designed to permit local traffic and agricultural traffic to join the strategic network in the safest practicable way. Following further traffic modelling, National Highways proposed several design changes to Mattock's Tree Green junction. These would improve access for communities living in West Hatch and Hatch Beauchamp and aim to reduce rat running on local roads.  Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). Should the application be approved, specific lighting specification will be discussed and agreed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.  National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.	Yes
195	557	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	I agree safe access should be provided but a simple 'T' junction would be adequate, not the roundabout solution proposed. Traffic to these locations is minimal and outside of peak times.	The proposed Mattock's Tree Green junction western dumbbell roundabout has been included into the design to accommodate the forecast volume of traffic flow expected between the A378 and the proposed A358 westbound carriageway on and off slip roads. The tie in with the new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm joins the roundabout to take advantage of a junction form already proposed.  Since the 2021 Statutory Consultation, the design of this roundabout and the link road has been amended slightly. The link road has been extended to West hatch Lane to give traffic from West Hatch Lane a more direct connection to the A358, and the direct link between the roundabout and Ash Road has been removed. Ash Road will join the new link road in a priority junction to the south of the roundabout. This is to reduce the likelihood of traffic using Ash Road as a rat run between the A358 and the south of Taunton.	Yes
196	557	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields	This is essential and should provide safe, off-road provision for cyclists between Ilminster and Junction 25 of the M5	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		roundabout? Please let us know the reasons for your response			
197	569	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Motorway traffic and local traffic needs greater separation. The proposed arrangement of the two roundabouts giving access to the M5 will generate congestion and will cause drivers to look for alternative (rat runs) through the local villages. The closure of Greenways lane and the re-routing of Stoke Road will cause traffic to look elsewhere. The cluster of private schools, colleges and businesses in South Taunton which generate much of this traffic is not easily accessed from Toneyway to the north of Taunton. Access through to south Taunton should be made simpler by reopening the old Ilminster Road through to the Blackbrook roundabout. Otherwise, the traffic currently using Greenways and Haydon will simply find another way through. Blackbrook is an industrial area. No residents in and around Blackbrook will be affected by this change.	<p>National Highways has undertaken operational modelling of all junctions along the A358 corridor, including the upgraded M5 junction 25 and Nexus 25 junction. These confirm that all junctions along the A358 will operate within their practical capacity. As part of this process forecast queue lengths at all junctions have also been reviewed to ensure that there are no operational or safety concerns. The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>National Highways have carried out traffic modelling of the A358 between Taunton and Ilminster and the local road network in the vicinity. The traffic modelling indicates that because of the significant reductions in journey time and congestion on the new A358 there is a decreased likelihood of people using alternative routes in the surrounding area. As a result, there will be very small changes on most local roads (a change of less than 250 vehicles per direction on a weekday in 2031), although some see a very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>The potential of opening the bus only road link at Old Ilminster Road (off Blackbrook Park Avenue) to general traffic has been discussed with Somerset Council as the local highway authority responsible for that part of the road network. This has been rejected by Somerset Council on the basis that the bus only link is an essential component of bus priority measures in the town that would be lost if the road were to be shared with wider traffic flows.</p>	Yes
198	569	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	General: There is an imperative need for laybys along the whole length of the proposed road at suitable locations. However grass margins at carriageway level should be provided along the whole length of the road to allow broken down vehicles to pull off the running surface.	Parking and emergency lay-bys have been included at appropriate intervals along the scheme. In conjunction with the two junctions at Mattock's Tree Green and Ashill, National Highways considers this is appropriate provision to enable vehicles to exit from the main A358 carriageway in an emergency.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
199	569	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Visual/light pollution The visual impact of the proposed road will have a significant adverse effect on all the dwellings and footpaths in the hamlet of Haydon, Arundells Farm and the dwellings and footpaths on the road between Henlade and Stoke St. Mary. Bunding, planting, and acoustic fencing will be essential on the south side of the proposed A358, all the way from Nexus to Lower Henlade where the road is on an embankment, to screen the road (head and tail lights and noise pollution) from these dwellings. If street lighting is to be provided on the Nexus roundabout, it should be directed onto the carriageway surface with minimal light spillage and not extend along the new road.	National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.  The environmental assessment has identified potential impacts and incorporated environmental mitigation measures into the scheme through changes to the engineering design, and provision of visual screening, environmental earthworks, and acoustic barriers where required.	Yes
200	569	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	The design of the roundabout at the junction of the Langport road (Mattocks Tree Green) is an open invitation to use the rat run down Ash Road through Stoke St Mary to south Taunton. National Highways' own modelling suggests that up to double the current traffic would go through the village. In our view, this junction to the roundabout is unnecessary (there will be several ways the new road can be accessed from the village and West Hatch can access it from the new Scout Camp road). This link must not be built. The old A358 dual carriageway from Mattocks Tree Green to Henlade would seem to be a far higher standard of road than will be required to carry the greatly reduced volume of traffic using this connection once the new road is open. Does this not provide an opportunity to close one carriageway to vehicular traffic and use it as a cycle/footway/bridleway? Greenway Lane will quite rightly have no connection with the proposed A358. It is currently used as a rat run by high volumes of traffic approaching and leaving Taunton. Residents of Greenway Lane, Lower Henlade and Haydon will rejoice when it is closed. However, its closure will result in the rerouting of this traffic to other even more unsuitable roads. Ash Road continuing through Stoke St. Mary is the obvious alternative. This road in places is a single track road with limited forward visibility and very sub-standard passing places. There is also the potential for traffic from Creech St. Michael to cross at Henlade and travel in and out of Taunton via Haydon. Traffic management measures must be agreed and ready to be implemented on the day the proposed A358 opens. It is unacceptable for Highways England to create a significant problem off the line of their scheme and leave it to Somerset County Council to find a solution.	National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows.  An assessment of the change in traffic flows on local roads has been carried out between forecast scenarios with the scheme and without the scheme in consultation with Somerset Council, and the scheme includes mitigation measures on some of the local road network where traffic flows are forecast to change significantly. This review has also looked at infrastructure concerns flagged through the consultation process to incorporate upgrades targeted at increasing resilience in the case of flooding or similar problems.  The traffic modelling undertaken shows that there will be very small changes on most local roads (a change of less than 250 vehicles per direction on a weekday in 2031), although some see a very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.  Feedback during the 2021 A358 statutory consultation expressing concern about the predicted rise in traffic flow using Ash Road resulted in a design change. This was a realignment of Ash Road to discourage the use of Ash Road as an alternative route between the A358 and Taunton.  The modelling of the new proposed A358 scheme design suggests that there will be no notable change in the traffic flow using Ash Road or going through Stoke St Mary, Thurlbear or West Hatch with the proposed A358 scheme in place (a change of less than 250 vehicles per direction on a weekday in 2031).  The current design of the proposed A358 scheme does not allow traffic direct access from either the existing A358 or the new A358 to Greenway Lane - it will be closed to through traffic and only accessible via Stoke Road.  The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
201	569	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	The proposed new road connection involves excessive land take and severs arable land to the extent that the use of the land on either side is severely compromised. A better option to maintain access to these properties and the Scout Camp would be to provide an under or over bridge (depending on the level of the proposed A358) from Village Road where it meets the new connection with Mattocks Tree Green Junction. (Alternatively) the new road should follow the line of the new A358 until it reaches the current access to the Scout camp and the school.	<p>The provision of a link and overbridge at this location was deemed unfeasible due to a combination of low traffic demand, spatial constraints restricting bridge approaches and associated environmental impact. It is considered more efficient to provide a link to the Scout Camp and local business from the proposed Mattock's Tree Green junction.</p> <p>National Highways has sought to limit the severance of agricultural holdings which farm land both sides of the scheme through the provision of a number of local highway overbridges/underbridges. Where it has been considered agricultural circumstances require additional mitigation, agricultural access tracks which link severed parcels of agricultural land to the local highway network have been provided. The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land function. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p>	Yes
202	569	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	During lockdown we saw what was possible when traffic was only generated locally. The community is preparing a traffic strategy for the village which will also be improved by the closure of Greenway Lane and the reduction of traffic through Lower Henlade. All this is dependent on reducing traffic down the Ash Road rat run.	<p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows.</p> <p>The traffic modelling undertaken shows that there will be very small changes on most local roads (a change of less than 250 vehicles per direction on a weekday in 2031), although some see a very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Feedback during the 2021 A358 statutory consultation expressing concern about the predicted rise in traffic flow using Ash Road resulted in a design change. This was a realignment of Ash Road to discourage the use of Ash Road as an alternative route between the A358 and Taunton.</p> <p>The modelling of the new proposed A358 scheme design suggests that there will be no notable change in the traffic flow using Ash Road or going through Stoke St Mary, Thurlbear or West Hatch with the proposed A358 scheme in place (a change of less than 250 vehicles per direction on a weekday in 2031).</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
203	569	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	There are over forty horses in seven establishments within the village of Stoke St Mary and more in the rest of the parish. Many people cycle and more walk.	Provision for walkers, cyclists and horse-riders has been integral to the scheme design from options assessment to the current scheme that is being submitted for a development consent order. This has included liaison with a range of user groups, including those representing the local horse-riding community. Liaison with stakeholders has included the Ramblers, Taunton Area Cycling Campaign, Taunton Deane Bridleways Association and South Somerset Bridleways Association.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
204	569	Do you have any other comments you would like to make about our proposals?	An Expressway that begins at a roundabout notorious for delays and ends at a double roundabout of absurd design: that requires an enormous amount of elaborate design to accommodate local access that is currently simple; and that creates the potential for collateral damage through creating new rat runs, is overkill. The Henlade bypass is essential, beyond that, better design of access and egress from the M5 and the A303 would achieve 95% of the effect of the current scheme at half the carbon footprint.	<p>The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges support for the scheme excluding the section between Thornfalcon and Southfields. However, that section is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	Yes
205	573	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	High level of traffic congestion already, will be worse once dual carriageway is in place	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the on the detailed design of the local roads mitigation will continue into the next design stage.</p>	Yes
206	5'3	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	<p>Scale of Mattock's Tree Green</p> <p>In addition the proposals for the Mattock tree green junction with its two roundabouts seems excessive. There does not seem to be a need or justification for the proposed scale of these roundabouts especially on the south western side of the junction which only serves small back routes with little traffic. This part of the scheme is on raised ground close to the Blackdown Hills AONB . I am concerned the junction as proposed will require a great deal of lighting and this will have a detrimental impact on the rural character of this location, (close to AONB) and the ecology (i.e. bats) that are active in this locality. The design as it is will also be very expensive to deliver. Can the design be reconsidered and reduced in scale to both limit its impact on nature and reduce the cost of the scheme as a whole.</p>	<p>Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.</p> <p>Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, specific lighting specification will be discussed and agreed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
207	573	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Noise mitigation I am concerned that noise pollution is dealt with adequately on the proposed section between Stoke road (new) bridge and Mattocks tree green junction. The noise attenuation fencing needs to be continuous along the southern side of the route past residential properties, particularly those on Stoke Hill which are raised above the route of the road and will potentially be significantly affected by noise from the new road if this isn't dealt with adequately	The scheme will include low noise surfacing to reduce noise emissions. In addition, as informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement Chapter 2 The project and within Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barrier are shown on Environmental Statement Figure 7.8 Environmental Masterplans (Document Reference 6.3).  An acoustic barrier and bund combination will be provided on both sides of the proposed scheme in Lower Henlade. On the eastbound carriageway this will be between approximate chainage 1800 before Stoke Road overbridge to just past Stoke Road overbridge and on the westbound carriageway it will extend from just past the junction of Greenway Lane and Stoke Hill at approximate chainage 3350 to chainage 1980 just past Stoke Road overbridge as detailed in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3). The scheme will have a low noise surface which will also minimise noise emissions.	Yes
208	573	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	I am concerned that noise pollution is dealt with adequately on the proposed section between Stoke road (new) bridge and Mattocks tree green junction. The noise attenuation fencing needs to be continuous along the southern side of the route past residential properties, particularly those on Stoke Hill which are raised above the route of the road and will potentially be significantly affected by noise from the new road if this isn't dealt with adequately. In addition the proposals for the Mattock tree green junction with its two roundabouts seems excessive. There does not seem to be a need or justification for the proposed scale of these roundabouts especially on the south western side of the junction which only serves small back routes with little traffic. This part of the scheme is on raised ground close to the Blackdown Hills AONB . The scheme will have a low noise surface which will also minimise noise emissions.  Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, specific lighting specification will be discussed and agreed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.  Details of the bat roost, bat activity, bat trapping and radio tracking and bat hibernation surveys are provided in Environmental Statement Chapter 8 Biodiversity (Document Reference 6.2) and supporting Appendices 8.8 Ecological Baseline Report – Bat Roosts, 8.9 Ecological Baseline Report – Bat Activity, 8.10 Ecological Baseline Report – Bat Trapping and Radio Tracking and 8.11 Ecological Baseline Report – Bat Hibernation. The Environmental Statement (Document Reference 6.4) also includes a mitigation strategy for bats (Appendix 8.27 Ecological Mitigation Strategy – Bats) which has been discussed in meetings with Natural England to inform a bat mitigation strategy along agreed lines. All surveys have been undertaken in accordance with best practice guidance and details of survey methodologies are provided in the relevant bat reports. In summary, fifteen of the seventeen species of bat known to breed in the UK have been identified along the scheme and three of the four rarest species have been shown to have maternity roosts close to the scheme.  Mattock's Tree Green junction has been designed in accordance with the appropriate standards (DMRB	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed. The roundabouts provide traffic free-flowing means of accessing all movements at the junction and also include crossings for walking, cycling and horse-riding users.</p> <p>Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, the specific lighting specification will be developed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	
209	573	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	Proposals again seem excessive. Would not a simple 'T' junction be adequate to serve the Somerset Progressive school, Scot camp etc rather than the proposed roundabout.	<p>The proposed Mattock's Tree Green junction western dumbbell roundabout has been included into the design to accommodate the forecast volume of traffic flow expected between the A378 and the proposed A358 westbound carriageway on and off slip roads. The tie in with the new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm joins the roundabout to take advantage of a junction form already proposed.</p> <p>Since the 2021 statutory consultation, the design of this roundabout and the link road has been amended slightly. The link road has been extended to West hatch Lane to give traffic from West Hatch Lane a more direct connection to the A358, and the direct link between the roundabout and Ash Road has been removed. Ash Road will join the new link road in a priority junction to the south of the roundabout. This is to reduce the likelihood of traffic using Ash Road as a rat run between the A358 and the south of Taunton.</p>	Yes
210	586	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	The road needs up grading but it must be done in way that is sympathetic to residents and road users.	National Highways welcomes support for the proposals.	Yes
211	586	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Local residents in lower Henlade must also have good access to bus stops which are located on the a358 existing road.	<p>Stoke Road realignment would retain the existing cross-section that it ties into, i.e. a carriageway with a grass verge on both sides. Pedestrians and cyclists would be able to walk or cycle in the carriageway as they do at present, and the grass verge would provide a temporary refuge for pedestrians if needed.</p> <p>With the scheme in place, it would be easier for people walking to and from bus stops on the existing A358 to cross the road on either side of the junction with Stoke Road. The volume of traffic would fall by more than 90% with the scheme in place. There would be more gaps in the flow of traffic in which people could cross the road to reach bus stops on the other side and less delay.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
212	586	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Agree with the bridge provided there are good pavements so that this bridge can be used for local traffic and pedestrians together.	National Highways welcomes support for the proposals.	Yes
213	586	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Noise mitigation It is essential that the noise reduction fencing and noise reducing road surfaces are used on the proposed section between Stoke Road bridge and Mattocks Tree Green junction. This section runs past residential properties located off Greenway Lane and, significantly, those properties on Stoke Hill which are raised above the route of the road and will therefore potentially be affected by noise from the new road if it is not properly accounted for with noise reduction measures.	The scheme will include low noise surfacing. In addition, as informed by the detailed modelling of the spread of noise that has been undertaken, noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. A description of the embedded noise mitigation measures included within the scheme design is provided in Environmental Statement Chapter 2 The project and within Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of noise bunds and barrier are shown on Environmental Statement Figure 7.8 Environmental Masterplans (Document Reference 6.3).  An acoustic barrier and bund combination will be provided on both sides of the proposed scheme in Lower Henlade. On the eastbound carriageway this will be between approximate chainage 1800 before Stoke Road overbridge to just past Stoke Road overbridge and on the westbound carriageway it will extend from just past the junction of Greenway Lane and Stoke Hill at approximate chainage 3350 to chainage 1980 just past Stoke Road overbridge as detailed in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3). The scheme will have a low noise surface which will also minimise noise emissions.	Yes
214	586	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Scale of Mattock's Tree Green The proposed 2 new roundabouts seem excessive at this junction, they are mostly serving a small community (Scout camp and Progressive school only) on the Ash Road side. There does not seem any justification for the scale of roundabouts at this junction with their light pollution and land take up. This area in particular is close to AONB and the impact on this environment should be kept to a minimum. Could a simple t-junction be used on this side of the junction? Also looks like a very expensive option and should be reconsidered. I would like to see more connectivity to the new road for local residents of Stoke Hill and Greenway Lane, who with the current proposals can only access the new road at this junction or J25 Nexus roundabout.	Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed. The roundabouts provide traffic free-flowing means of accessing all movements at the junction and also include crossings for walking, cycling and horse-riding users.  Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, the specific lighting specification will be developed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.	Yes
215	600	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Flow on to the round needs to be easier. It is necessary as the situation going through Henlade is not acceptable.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
216	600	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	The leave the village connected I see this as necessary and it will significantly reduce the flow of traffic in Henlade	National Highways welcomes support for the proposals.	Yes
217	600	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	it is essential for Hatch Beauchamp to be connected to the new road.	National Highways welcomes support for the proposals.	Yes
218	600	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Please put this road in between Capland and Village Road, we live in Stewley and are hugely disaffected by the new road proposals. Any addition links to Hatch and the bridge over to Bickenhall are needed to save our farming business. You will be adding hundreds of mile to our journeys over the course of a year, Please let us have this additional link. To get to our land at Bickenhall we will have to drive to Rapps through the village and then back along the new road this road other wise. How will you compensate us for 50 years of future farming losses from 100s of miles of additional tractor driving around?	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
219	600	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	We need this link	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
220	600	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	We need better access from Stelwey, as far as I can see this road is of no benefit at all to us. Why cant you just improve Southfields and Taunton end and leave the middle.	<p>Part of the proposed design includes a new link road which connects the village of Stewley with Ashill junction. This reduces the effects of severance and improves access to the new A358 for traffic from Stewley.</p> <p>The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges support for the scheme excluding the section between Thornfalcon and Southfields. However, that section is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	Yes
221	600	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Why do we need a new road, it is going to add time and mileage to any journey I do.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the on the detailed design of the local roads mitigation will Continue into the next design stage.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
222	600	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Would rather not have the road but we desperately need this one if it goes ahead. Would prefer a bridge to Wood Road though.	Wood Road connects to the proposed Ashill Link which provides a route to either the proposed Village Road (South) or to Ashill junction in order to cross the proposed A358 mainline.  A bridge here would not be feasible due to the level of the A358 which would result in a large impact to surrounding properties in order to provide a crossing.	Yes
223	600	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	It's a disaster for them all you, there are hardly any convenient crossings	Proposals for walkers, cyclists and horse riders and improved connections as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (Environmental Statement Appendix 2.1 Annex F, Document Reference 6.4).	Yes
224	600	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	We need the Stewley link to be created prior to the new road construction, we have to get artic lorries here on a daily basis it will not be possible for them to come on the back lanes	National Highways is committed to keeping the A358 open to traffic during construction and will seek to minimise disruption while maintaining highway safety. The Environmental Management Plan (Document Reference 6.4, Appendix 2.1) and Construction Traffic Management Plan (Document Reference 6.2, Appendix 2.1, Annex B) set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highways authority, Somerset Council, to identify and manage any potential mitigation measures required.  Phasing of the works depends on a number of factors and will be optimised for delivery of the scheme as a whole.  Should the application be approved, the contractor will produce an updated Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) as part of the detailed design stage. This would plan the construction phasing, which would be in discussion and agreement with Somerset Council.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
225	600	Do you have any other comments you would like to make about our proposals?	This road is not necessary, do either end at Southfields and Henlade and leave the rest, it is a disaster for local villages.	<p>The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges support for the scheme excluding the section between Thornfalcon and Southfields. However, that section is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	Yes
226	605	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	After the road improvements carried out here at great expense nothing much has changed so adding bridges etc will make no difference. The real problem is Henlade and its speed limit and nothing you propose will make any difference even with your proposals although they will certainly have an impact on my village. Why do we have to have any 'improvements' at all? What everybody needs to learn is patience and we'll all end up where we want to be without ruining villages and the countryside.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>The proposed design change to have the Nexus 25 junction as a signalised junction would better accommodate a crossing of the A358 for walkers and cyclists. The proposed signalised crossing would provide adequate capacity for the predicted traffic flows and allow more control over traffic movements by linking the operation of the signals to those at the M5 junction 25 roundabout and Taunton Gateway Park and Ride. The signalised crossing is incorporated into the timings and has no significant effect on the time given to vehicle traffic.</p> <p>As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
227	605	Do you have any other comments you would like to make about our proposals?	LISTEN TO LOCAL PEOPLE - WE LIVE HERE SO PLEASE LISTEN TO ALL OF US	<p>National Highways acknowledges this comment.</p> <p>As set out in this report, National Highways considers that consultation was accurate, robust, had an appropriate reach and allowed sufficient time to provide a response, meeting all the required National Highways standards and requirements of the Planning Act 2008 and EIA (Infrastructure) Regulations. As set out in the Statement of Community Consultation (Document Reference 5.1, Appendix 4.4) advice was sought from Local Authorities on how to consult appropriately, to ensure stakeholders and the local community were informed of the consultations and had the opportunity to contribute to them.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
228	611	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	A Village will be turned into a busy and unsafe way.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the on the detailed design of the local roads mitigation will continue into the next design stage.</p> <p>The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p>	Yes
229	611	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	I will hold COUNCIL until more is thought about.	National Highways acknowledges this comment.	Yes
230	611	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	God help us/	National Highways acknowledges this comment.	Yes
231	611	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	The flood improvements must be considerable otherwise the hamlet in Stewley will be a no go area.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
232	611	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	God help us.	National Highways acknowledges this comment.	Yes
233	611	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Might be possible if no cars use it.	National Highways acknowledges this comment.	Yes
234	611	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Only good thing coming out of this.	National Highways acknowledges this comment.	Yes
235	611	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	as above otherwise we will have a 1/2 day trip to get to GP.	National Highways acknowledges this comment.	Yes
236	611	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	as above otherwise we will have a 1/2 day trip to get to GP.	National Highways acknowledges this comment.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
237	611	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Unworkable	National Highways acknowledges this comment.	Yes
238	611	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	More traffic build up disruption.	<p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>National Highways is committed to keeping the A358 open to traffic during construction and will seek to minimise disruption while maintaining highway safety. The Environmental Management Plan (Document Reference 6.4, Appendix 2.1) and Construction Traffic Management Plan (Document Reference 6.2, Appendix 2.1, Annex B) set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highways authority, Somerset Council, to identify and manage any potential mitigation measures required.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
239	611	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	Waste of money.	<p>The South West's economy is under-performing compared to the UK average. Local councils and business leaders agree that upgrading the rest of the A303/A358 corridor to dual carriageway would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p> <p>National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including journey time savings to road users, road safety, wider economic impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to examine whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient strong to support delivery. This is reviewed at every stage of work to determine whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the Development Consent Order is granted.</p> <p>The proposed scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>Details of the Benefit-to-Cost ratio (BCR) and the scheme costs are given in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
240	611	Do you have any other comments you would like to make about our proposals?	It is very apparant anyone driving this through does not living in the area. if you make as good a job and the smart motorways well god help us.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
241	622	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	I live in Henlade and the volume of traffic through the village on the A358 is very worrying for my health and that of my children. The journey time from the M' to Southfields is very long and the road in it's single carriageway configuration has several pinch points and accident blackspots. I believe this scheme will benefit residents of villages along the route, as well as visitors to the area by reduce journey times and pollution. It will be a long process, and unfortunately some nice land will be built on, but overall I feel the benefits outweigh the downsides. It will enable more people to enjoy and settle in local communities like Ilminster, Yeovil and Chard, while being able to access the motorway network more quickly.	National Highways acknowledges the range of views expressed, including those received in support of the scheme.	Yes
242	622	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	I think the separation of traffic from the major dueled A358 in this way is the safest and best way to do this and retains plenty of access options for locals.	National Highways acknowledges the range of views expressed, including those received in support of the scheme.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
243	622	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	I think this the best and most futureproof way of achieving the overall scheme aims, but it is a lot of change for the area, so I can appreciate the uproar. Setting the junction into the hill will go some way to ameliorate the effect of the junction on the surroundings, but I do feel that more could be done to beautify the approaches and access roads.	National Highways acknowledges the range of views expressed, including those received in support of the scheme.	Yes
244	622	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	I feel like more could and should be done to provide for cyclists here. I think a segregated carriageway avoiding any crossings of any access road is the most sensible way to go. This would be relatively expensive, but invaluable for the safety of the other road users.	National Highways looked at the pros and cons between providing for cyclists within the A358 corridor (online) or outside (offline). The design criteria were coherence, directness, comfort, attractiveness and safety. The case for offline is stronger, utilising existing infrastructure and allowing cyclists to pass through places of interest. The proposed offline route uses lightly trafficked roads and traffic-free tracks.  The offline cycle route takes account a range of criteria such as traffic flows and speeds. Measures to improve the offline infrastructure such as providing a segregated cycle track are constrained by the scheme boundary, which cannot include land for the purpose of enhancement.	Yes
245	624	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	It will ease congestion at the M5 roundabout.	National Highways acknowledges the general support received in relation to the design proposals.	Yes
246	624	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Absolutely necessary to avoid splitting up the village of Henlade and to facilitate access to the old A358 for residents of Stoke Road and Mount Somerset.	National Highways acknowledges the general support received in relation to the design proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
247	624	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Enables connectivity to and from major local roads and links from otherwise semi isolated villages.	National Highways acknowledges the general support received in relation to the design proposals.	Yes
248	624	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	This is essential to avoid goods vehicles having to use unsuitably narrow lanes for access.	National Highways acknowledges the general support received in relation to the design proposals.	Yes
249	624	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	This is absolutely essential to facilitate access for Hatch Beauchamp west bound traffic whilst avoiding unsuitably narrow lanes.	National Highways acknowledges the general support received in relation to the design proposals.	Yes
250	624	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know	If the proposed service road from Ashill to the proposed Hatch Beauchamp flyover is extended to Bickenhall lane it would not be necessary.	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		the reasons for your response			
251	624	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	It would be far more desirable to create an additional full junction at this point with bridge over and on and off slip roads for both Eastbound and Westbound carriageways and linking the proposed service road from Ashill and as previously suggested Bickenhall lane.	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	Yes
252	624	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Preference for option 1. Reason: Absolutely necessary to provide local residents access to Hatch Beauchamp without massive additional mileage.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
253	624	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Vital for connectivity between local communities and also combined with suggested new additional Junction at Hatch Beauchamp (East) would dramatically reduce forecast increase in traffic through both Hatch Beauchamp and Ashill which are the most adversely affected villages along the whole route (excl, Henlade).	National Highways acknowledges the general support received in relation to the design proposals.	Yes
254	624	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	The junction is absolutely necessary however appears to be overcomplicated by the re-routing of Rapps road and massive greenfield land take.	Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.  The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
255	624	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	This connection would be much better served by your original suggestion in 2007 and earlier this year of a Kenny overbridge plus a non highway-standard single lane track from the overbridge to the sewage treatment plant and a much shorter and economic land usage of a link between Park Barn lane and an improved Rapps road.	National Highways acknowledges support for responses provided to the consultation by the Community of Parishes and individual parish councils. Full responses to each of the matters raised can be found in the Consultation Report Appendix 5.2 Table 5.2B, Appendix 6.4 and Appendix 8.2 Table 8.2B (Document Reference 5.2). Suggested alternative proposals have been considered and some elements have been adopted into the scheme design.	Yes
256	624	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	This will greatly improve connectivity between Broadway, Ilton, Thickthorn, Hastings Rapps and Ashill reducing unnecessary mileage and carbon emission for years to come.	National Highways acknowledges the general support received in relation to the design proposals.	Yes
257	624	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	This will greatly improve connectivity between Broadway, Ilton, Thickthorn, Hastings Rapps and Ashill reducing unnecessary mileage and carbon emission for years to come.	National Highways acknowledges the general support received in relation to the design proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
258	624	Do you have any other comments you would like to make about our proposals?	Your proposals to remove 18 access points and replace with one between the Mattocks Tree Hill Junction and Southfield roundabout, a distance of five miles, are showing complete disregard for the health safety and lifestyle of the residents of the villages and communities along the route. Nobody has looked at the effects of gritting in winter. Most of these side roads do not come under the winter schedules for gritting therefore the massive increases in traffic movement will dramatically increase the risk of accidents and demands on emergency service. The condition of many of the side roads that will become essential in everyday life are already sadly lacking in maintenance and will undoubtedly become much worse with the predicted increase in traffic movements.	<p>The Preferred Route Announcement made in June 2019 was made considering public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we’re committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government’s first Road Investment Strategy (RIS1) intention to create a new Expressway corridor into the region, but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p> <p>For the A358 to become a high-quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed. As such, all of the direct local road accesses have been removed and access to Mattock’s Tree Green junction and Ashill junction are provided.</p> <p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The traffic modelling undertaken shows that there will be very small changes on most local roads, although with some seeing very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>An assessment of the change in traffic flows on local roads has been carried out between forecast scenarios with the scheme and without the scheme in consultation with Somerset Council, and the scheme includes mitigation measures on some of the local road network where traffic flows are forecast to change significantly. This review has also looked at infrastructure concerns flagged through the consultation process to incorporate upgrades targeted at increasing resilience in the case of flooding or similar problems.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
259	630	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	It will be impossible to cross the new road except by means of a bridge or preferably a tunnel. I do not know how many people will be affected by the provision of this bridge and would be concerned about noise levels and safety	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.</p> <p>The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of low noise surfacing, cuttings, acoustic bunds and other physical features to reduce noise impacts during operation and best practicable means including some localised noise screening and low vibration plant during construction. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed. The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).</p>	Yes
260	630	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Judging by the visualisation of the proposed Ashill Junction what started out as an extension of the A358 to a dual carriageway has become the place where all roads meet. I could not find anywhere in your literature the justification for building so many new roads!	<p>The proposed junction at Ashill comprises of a 'diamond' arrangement which is a standard all movements grade-separated junction type in accordance with the Design Manual for Roads and Bridges (DMRB), which are the design standards for use on the strategic road network.</p> <p>The additional links shown at the Ashill Junction ensure connectivity to adjacent communities is maintained.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p>	Yes
261	630	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	But of course it will all be worth it because it will take 5 minutes less to drive from Taunton to Southfields. What a strange world we live in.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p> <p>Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
262	630	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	The initial decision to create a super highway was flawed. The actual way to deal with an increased connection to the South West was of an extension of the A303 to Exeter and an upgrade of the A358 to a dual carriageway. Instead we have the worst of all worlds. No second route to the West and my neighbours losing their livelihood and their home.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS 3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p>	Yes
263	630	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	I had a road in front of my cottage and the A358 150 metres away and now I have two roads within 100 metres.	National Highways acknowledges this comment.	Yes
264	633	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	As I live in the village of Ashill, which I chose for its low traffic use - I will be strongly affected by the proposals. Traffic from all other villages will now be filtered through Ashill.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the on the detailed design of the local roads mitigation will continue into the next design stage.</p> <p>The traffic calming measures changes proposed in Ashill village are to narrow the road, build sections of kerbs or footways into the road and improved pedestrian crossing facilities at several locations through the village as well as enhancing road signing and marking. These measures would reduce driver speeds and therefore improve safety for all users.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
265	633	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	As above. As a resident of Ashill, I will be the most affected by these proposals. Removing 18 junctions send all the traffic through Ashill.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. These measures would reduce driver speeds and therefore improve safety for all users.</p>	Yes
267	635	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Any improvements are welcomed	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
268	635	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Stoke road is important to the local traffic	National Highways welcomes support for the proposals.	Yes
269	635	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	This is a very well used road up to the Garage and on to Langport for us . The new junction to the M5 or the 303 we hope will be a big help to all in the our yard.	National Highways welcomes support for the proposals.	Yes
270	635	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	Yes there should be good access . The route shown here worries us because of our security, at the present the back of our yard is not visible and open yard storage of diggers and dumpers and general plant is secure and not looked on by passing traffic, this would change that,	National Highways have continued to engage with this landowner. The design in this area has been changed following statutory consultation and woodland planting is now proposed between the Scout Camp link and this business. This will help to screen the business for local users of the road.  Furthermore, taking into account consultation feedback, the design in this area has been changed so access to this business will remain off Ash Road.	Yes
271	635	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	This needs to be a good direct link	National Highways acknowledges this comment.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
272	635	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	This route needs to stay open so a bridge is a good !!	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.</p>	Yes
273	635	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	im not sure what is best here	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
274	635	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	im not sure , there are local people who would be better placed to comment on this,	National Highways acknowledges this comment.	Yes
275	635	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	locals are better placed to comment really	National Highways acknowledges this comment.	Yes
276	635	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	locals would be the best ones to ask	National Highways acknowledges this comment.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
277	635	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	ask the locals they have better knowledge than me .	National Highways acknowledges this comment.	Yes
278	635	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	ask the locals they have better knowledge than me .	National Highways acknowledges this comment.	Yes
279	635	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	can only be a good thing	National Highways welcomes support for the proposals.	Yes
280	635	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	The access for all our tenants daily work trips in an out of our yard is our priority , we really hope you can help that happen while you are building around us.	National Highways have continued to meet with this landowner and discuss the access arrangements. Following statutory consultation the design of Ash Road was amended and now no longer impacts on the existing landowner access.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
281	635	Do you have any other comments you would like to make about our proposals?	We value our front gate only entrance, it our security , its how we have a full yard and a thriving business. I would add that im worried about increased traffic through stoke st mary to get to Mattocks Hill , most of this is narrow lane especially Stoke hill,	<p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the detailed design of the local roads mitigation will continue into the next design stage.</p> <p>National Highways have continued to engage with this landowner. Taking into account consultation feedback, the design in this area has been changed so access to this business will remain off Ash Road.</p>	Yes
282	637	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	My only concern would be the Double roundabout situation from the M5 for East bound traffic. The M5 roundabout and the new Nexus roundabout have little storage space for traffic volume Eastbound being only duel carriageway.	<p>Somerset County Council (as were) completed an improvement scheme at M5 junction 25 in January 2021. This has increased the capacity at the roundabout and its approach arms significantly as the roundabout has been widened from three to four lanes.</p> <p>As part of the A358 Taunton to Southfields Dualling scheme, further enhancements are proposed at M5 junction 25, which would mean it would continue to operate within its capacity. The results of associated traffic modelling for M5 junction 25 are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>The proposed design change to have the Nexus 25 junction as a signalised junction would better accommodate a crossing of the A358 for walkers and cyclists. The proposed signalised crossing would provide adequate capacity for the predicted traffic flows and allow more control over traffic movements by linking the operation of the signals to those at the M5 junction 25 roundabout and Taunton Gateway Park and Ride. The signalised crossing is incorporated into the timings and has no significant effect on the time given to vehicle traffic.</p> <p>There is no significant difference in the amount of delay between a signalised Nexus 25 junction versus an enlarged roundabout arrangement during typical peak period operation. The signalisation allows better control of traffic flows, and accommodation of tidal movements into and out of the Nexus 25 employment site at different times of day.</p>	Yes
283	637	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	I believe that from West Hatch Lane identified as number 7 on the map right through to Cad Road / Broadway should be left as a single carriageway road, perhaps with overtaking lanes and better run off's and run on's for all the side roads. The current road travels at 50mph for the whole day and only gets bogged down at the junctions at both ends and perhaps for the odd tractor. Improving the road rather than rebuilding it would be financially sensible and equally not destroy the local inhabitants access to the A358. This would also save the environment, additional traffic on minor roads and still give the brief you are working to a with a working road at 50mph.	<p>The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>The National Highways delivery plan for 2020 – 2025 confirms that we're committed to delivering a high-quality and high-performing dual carriageway route along the A303/A358 corridor, not an expressway or a motorway. This represented a change to the Government's first Road Investment Strategy (RIS1) intention to create a new Expressway corridor into the region, but the second Road Investment Strategy (RIS2) revised this intention, taking into account an expressway prohibits the use of farm vehicles, and the local area is rural in nature. As part of the scheme National Highways would permit local traffic and agricultural traffic to join the strategic network in a safe way via a limited number of junctions.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
284	637	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	The access for locals would send them down much narrower roads to enable access to the A358.	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
285	637	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	The access for locals would send them down much narrower roads to enable access to the A358.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where the scheme is forecast to lead to increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures on the local road network are proposed to help ensure that increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the details of the local roads mitigation will continue into the detailed design stage.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
286	637	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	I do not agree with the cutting off of the minor roads	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
287	637	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	The building of so many minor roads to allow the local villagers to connect with the A358 and equally to get from one side to the other affects so many locals, generally to a worse case than they are currently situated. I would for instance have to drive a additional 5 miles to get to my neighbours across the road. Therefore to keep the road as it is with improvements to the junctions in my opinion would resolve the problems of local connections to the road.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where the scheme is forecast to lead to increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures on the local road network are proposed to help ensure that increases in traffic do not have a detrimental impact</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
				<p>on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the details of the local roads mitigation will continue into the detailed design stage.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	
288	637	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	I believe the road in this section currently flows at a adequate speed, generally at 50mph without alteration to a duel carriageway. The enabling of passing places would ease the problems when tractors or slower vehicles have to use the road.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p>	Yes
289	637	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	This is a monumental undertaking not only for the new road, but for all the diversions to the existing road system and this would cause increased usage of the minor roads for access to the A358.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where the scheme is forecast to lead to increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. 292	637	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	This is a monumental addition to the minor road which leads to Broadway and will encourage usage to Broadway and beyond, of which the road system would become a cut through to the A303 west, missing out the Ilminster roundabout.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where the scheme is forecast to lead to increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures on the local road network are proposed to help ensure that increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the details of the local roads mitigation will continue into the detailed design stage.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
293	637	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	I believe that the existing road fulfils its use as a 50mph main road without becoming a Duel Carriageway until you reach the Ilminster Roundabout.	<p>The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges the comment. The section between Thornfalcon and Southfields is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	Yes
294	637	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	The route is difficult to encompass with the joining of the minor roads. Many of these will become rat runs as getting access to the A358 becomes difficult or creates a longer journey for many.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where the scheme is forecast to lead to increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures on the local road network are proposed to help ensure that increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the details of the local roads mitigation will continue into the detailed design stage.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
295	637	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	The phasing of the road will take a considerable amount of planning during construction where any part of the old road and its junctions are being affected. Accessibility for land owners and property owners is paramount to the success of the project.	National Highways is committed to keeping the A358 open to traffic during construction and will seek to minimise disruption while maintaining highway safety. The Environmental Management Plan (Document Reference 6.4, Appendix 2.1) and Construction Traffic Management Plan (Document Reference 6.2, Appendix 2.1, Annex B) set out how the impact of construction on the environment, the road network and local communities will be managed. National Highways continues to collaborate with the local highways authority, Somerset Council, to identify and manage any potential mitigation measures required.	Yes
296	637	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	I consider that the amount of Environmental studies sadly outweighs the information or care provided to the property owners, who are hardly consulted, without seeking out to do so. There seems to be more emphasis on the wild life preservation than human occupation. I believe the whole scheme is detrimental to the wonderful environment we currently have.	<p>National Highways acknowledges the range of views expressed including concern around impact on local people. The proposals aim to address the traffic issues and long delays currently experienced along the route and to improve traffic flow, safety and connectivity for local residents and other road users. The beneficial and adverse effects of the scheme on the local community are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2) submitted within the DCO application.</p> <p>Phasing of the works depends on a number of factors and will be optimised for delivery of the scheme as a whole.</p> <p>Should the application be approved, the contractor will produce an updated Construction Traffic Management Plan (Document Reference 6.4, Appendix 2.1, Annex B) as part of the detailed design stage. This would plan the construction phasing, which would be in discussion and agreement with Somerset Council.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
297	637	Do you have any other comments you would like to make about our proposals?	The scheme is set up for a motorway standard road, which ends at a road which is woefully inadequate (A303) and until that is sorted it is another dual carriageway going nowhere. Example A30 Exeter-Honiton. The scheme is flawed by not going ahead with the original scheme of duelling the A303 from Ilminster through to Honiton, which was planned during the late 20 <sup>th</sup> century. By using the A358 which because of its short length between the A303 & M5 seems to be a quick fix which in time will again become sadly another traffic jamb of the future.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p> <p>Part of the scheme includes upgrades to the Southfields roundabout so that we can safely adapt it to the new dual carriageway. Although a full upgrade of the roundabout is not included in these plans, National Highways are working on a future scheme for the A303 South Petherton to Southfields, carrying out a study on this section of the A303 to improve the flow of traffic. The A303 South Petherton to Southfields scheme was being considered as part of a pipeline of schemes that may be delivered through the third Road Investment Strategy (RIS 3) period (2025-2030). In March 2023, Government announced the pipeline of schemes earmarked for RIS3 (covering 2025 to 2030) will continue to be developed but considered for delivery as part of RIS4 (beyond 2030). All the schemes in the pipeline programme remain uncommitted, with no guarantee they will be taken forward into construction.</p>	Yes
298	643	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
299	643	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
300	643	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
301	643	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
302	643	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
303	643	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
304	643	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	Easier access to the Ashill junction from Hatch Beauchamp avoiding flooded lanes.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
305	643	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
306	643	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
307	643	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
308	643	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
309	643	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	Unnecessary.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
310	643	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Insufficient information available.	National Highways looked at the pros and cons between providing for cyclists within the A358 corridor (online) or outside (offline). The design criteria were coherence, directness, comfort, attractiveness and safety. The case for offline is stronger, utilising existing infrastructure and allowing cyclists to pass through places of interest. The proposed offline route uses lightly trafficked roads and traffic-free tracks.	Yes
311	643	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	Irrelevant as I disagree with the whole enormous project.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
312	643	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	All these environmental assessments and considerations are obviously necessary.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
313	643	Do you have any other comments you would like to make about our proposals?	I disagree with the whole vast scheme in that it takes up too much agricultural land and would destroy trees and hedgerows, which are very necessary in view of global warming. Yes, we do need the A358 to become dual carriageway and we do need to retain access for most local roads, but on a much smaller scale than this proposal.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land function. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and Soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p> <p>National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.</p> <p>As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).</p>	Yes
314	648	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	large loss of good agricultural land	<p>The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land function. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and Soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
315	648	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	concerns about 2 way traffic into hatch beauchamp on very narrow road causing gridlock also needless crossing of good agricultural land on east side when exhisting bickenhall lane could be used	<p>National Highways has sought to limit the severance of agricultural holdings which farm land both sides of the scheme through the provision of a number of local highway overbridges/underbridges. Where it has been considered agricultural circumstances require additional mitigation, agricultural access tracks which link severed parcels of agricultural land to the local highway network have been provided.</p> <p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The traffic modelling undertaken shows that there will be very small changes on most local roads, although with some seeing very significant benefit as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>An assessment of the change in traffic flows on local roads has been carried out between forecast scenarios with the scheme and without the scheme in consultation with Somerset Council, and the scheme includes mitigation measures on some of the local road network where traffic flows are forecast to change significantly. This review has also looked at infrastructure concerns flagged through the consultation process to incorporate upgrades targeted at increasing resilience in the case of flooding or similar problems.</p> <p>At Hatch Beauchamp the traffic flows are predicted to change by approximately 250 vehicles per day two-way, or 30 vehicles per hour during peak periods. This is the equivalent of one vehicle every 2 minutes during the peaks, which is unlikely to be a noticeable difference from the existing situation. The majority of these trips are expected to come from Hatch Beauchamp and Hatch Green, having had their routes changed slightly by the scheme, and therefore are people local to the villages being affected.</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
316	648	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	agricultural land along capland lane farmed by us and others will be unfarmable without this link for large machinery (combine, forager,rake ect) as we currently access this land from the a358 the stocks lane road from our other land and farmstead in curry mallet and beercrocombe is too narrow with high hedges each side for access with such machinery.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
317	648	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	this access must be kept open for large artic lorries to access hatch beauchamp, beercrocombe and curry mallet from the a303 ie milk tankers 730 visits a year into curry mallet alone also feed,fertiliser,fuel,and grain collection lorries (about 500 a year)+many others.	<p>National Highways understands this is referring to the closure of the existing Village Road junction with A358 and is concerned that HGV access is not maintained to Hatch Beauchamp, Curry Mallet and other areas east of the route as a result.</p> <p>The scheme would maintain adequate access to Hatch Beauchamp via the Ashill junction, Ashill Road link and Village Road link (south) for traffic travelling from the A303 and via the Mattock's Tree Green junction and Village Road link (north) for traffic travelling from the M5.</p>	Yes
318	648	Do you have any other comments you would like to make about our proposals?	this road should not be built. you are funneling 2 major buisy roads onto the m5 which is already at full capacity and gridlocked on holliday weekends.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
319	660	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	I disagree because of the large increase in traffic through Hatch Beauchamp. We will have to put up with the noise and disruption for the time that the work goes on.	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the proposals.</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4). At Hatch Beauchamp the traffic flows are predicted to change by approximately 250 vehicles per day two-way, or 30 vehicles per hour during peak periods. This is the equivalent of one vehicle every 2 minutes during the peaks, which is unlikely to be a noticeable difference from the existing situation. The majority of these trips are expected to come from Hatch Beauchamp and Hatch Green, having had their routes changed slightly by the scheme, and therefore are people local to the villages being affected.</p> <p>The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of low noise surfacing, cuttings, acoustic bunds and other physical features to reduce noise impacts during operation and best practicable means including some localised noise screening and low vibration plant during construction. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed.</p> <p>The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).</p>	Yes
320	660	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	We agree because it will help the traffic congestion and also bypassing Henlade	National Highways welcomes support for the proposals.	Yes
321	660	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	We do agree that this will be much safer.	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
322	660	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	We agree to give us access	National Highways welcomes support for the proposals.	Yes
323	660	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	We disagree because of the increase in the traffic coming through Hatch Beauchamp.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the proposals.  The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4). At Hatch Beauchamp the traffic flows are predicted to change by approximately 250 vehicles per day two-way, or 30 vehicles per hour during peak periods. This is the equivalent of one vehicle every 2 minutes during the peaks, which is unlikely to be a noticeable difference from the existing situation. The majority of these trips are expected to come from Hatch Beauchamp and Hatch Green, having had their routes changed slightly by the scheme, and therefore are people local to the villages being affected.	Yes
324	660	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let us know the reasons for your response	Traffic as before	National Highways acknowledges this comment.	Yes
325	660	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	To Provide safe access	National Highways welcomes support for the proposals.	Yes
326	660	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us	For access purposes	National Highways welcomes support for the proposals.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		know the reasons for your response			
327	660	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Happy with your plans.	National Highways welcomes support for the proposals.	Yes
328	662	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	The plans for the new layout at Mattocks Tree Hill would completely deface the beautiful natural lie of the land cause huge disruptions to the wildlife. The new road will ruin farmland and quiet villages just because highways want to increase the traffic flow to the westcountry. People want to come here to get away from the busy city life - this road will ruin the whole reason people live or visit the westcountry.	Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.  National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.  The case for the scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
329	662	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	We farm both sides of the A358 and we cross the road daily to feed cows. With the closure of the West hatch junction it would add an extra hour on to our day to get around the new road - meaning we would have to drive through the village of West Hatch (a quiet and peaceful village that doesn't get much traffic) at least twice a day! Not to mention all the farm machinery that would also be travelling through village when are making hay in the summer. We would have to use this junction more than once a day to feed cows, move cows, make hay and driving large farm machinery. The plans for the new layout at Mattocks Tree Hill would completely deface the beautiful natural lie of the land and cause huge disruptions to the wildlife. The new road will ruin farmland and quiet villages just because highways want to increase the traffic flow to the Westcountry. People want to come here to get away from the busy city life - this road will ruin the whole reason people live or visit the Westcountry. I do not agree with the widening of the A358 - you should be considering improving the A303 to Exeter and discourage people to use the A358.	<p>National Highways has sought to limit the severance of agricultural holdings which farm land on both sides of the scheme through the provision of a number of local highway overbridges/underbridges. Where it has been considered that agricultural circumstances require additional mitigation, agricultural access tracks which link severed parcels of agricultural land to the local highway network have been provided.</p> <p>Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.</p> <p>National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors.) Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.</p> <p>The case for the scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>Following feedback from statutory consultation National Highways have amended the design in this location and an extension to West Hatch Lane is proposed which connects it to Mattock's Tree Green junction via Huish Woods Lane and the Scout Camp link. This will enable access for this landowner via Mattocks Tree Green Junction.</p>	Yes
330	662	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	Yes you will need to give them access but there is no need to widen the A358 so there would be no need to add—a new connection. I do not agree with the widening of the A358 - you should be considering improving the A303 to Exeter and discourage people to use the A358.	<p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>The scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. The South West's economy is under-performing compared to the UK average and local councils and business leaders agree that the scheme would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
331	662	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	Whilst if the widening of the A358 does go ahead Hatch Beauchamp will need its own access it must not be used as a cut through when there is an accident on the A358 as this will cause a ridiculous amount of traffic coming through the village. Furthermore we sell cider because we have sign directing people off of the A358 to Hatch Beauchamp (1/2 a mile) - 95% of our sales are bought to us this way. We will not get customers if they close this junction and have village traffic from the top of Mattocks Tree Hill - So not only is this affecting our farm but also our produce sales! I do not agree with the widening of the A358 - you should be considering improving the A303 to Exeter and discourage people to use the A358.	<p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>Environmental Statement Chapter 12 Population and human health (Document Reference 6.2) considers impacts on businesses, and the proposed scheme aims to facilitate greater connectivity between Southfields roundabout on the A303 and the M5 Junction 25 at Taunton, and this is considered to be beneficial in terms of accessibility for local businesses with journey time savings along the proposed scheme.</p> <p>The Case for the Scheme (Document Reference 7.1) explains the need for the scheme and the reasons why the scheme put forward as part of this Development Consent Order application is the preferred solution.</p> <p>For the A358 to become a high quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed, complying with the Design Manual for Roads and Bridges (DMRB) CD 122. As such, most of the direct local road accesses have been removed and access to the A358 is from new grade separated junctions at Mattock's Tree Green and Ashill.</p> <p>Where the scheme is forecast to lead to increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures on the local road network are proposed to help ensure that increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the details of the local roads mitigation will continue into the detailed design stage.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
332	662	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	You will be affecting not only us but all the farmers in the area and all the inhabitants of the surrounding villages. If you encourage even more traffic to use A358 imagine all the noise travelling to the once quiet and peaceful villages - they live here because its quiet and peaceful. This is our home and livelihood. There will be an increase of all sorts of traffic of quiet country lanes that are often used by horse riders, children and cyclists - because they won't be able to get on to A358 as easily BECASUE YOU ARE PROPOSING TO CLOSE AT LEAST 13 JUNCTIONS AND TURN THE A358 INTO A MOTORWAY!	<p>The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p> <p>The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of low noise surfacing, cuttings, acoustic bunds and other physical features to reduce noise impacts during operation and best practicable means including some localised noise screening and low vibration plant during construction. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed. The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).</p> <p>The methodology and results of the traffic modelling, including details of the impact of the scheme on local roads, is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>For the A358 to become a high quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed, complying with the Design Manual for Roads and Bridges (DMRB) CD 122. As such, most of the direct local road accesses have been removed and access to the A358 is from new grade separated junctions at Mattock's Tree Green and Ashill.</p> <p>Where the scheme is forecast to lead to increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures on the local road network are proposed to help ensure that increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the details of the local roads mitigation will continue into the detailed design stage.</p>	Yes
333	662	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	If this new road layout does go ahead there will be a need for a bridge to connect the villages - however I would fear that this would increase the rate of traffic in these lovely quintessential villages. Driving inhabitants and visitors away.	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>This change has been made to discourage rat-running through Hatch Beauchamp and also address concerns about the impact that potential traffic increases may have on WCH users along Bickenhall Lane. As a result of this change, there would be no public motor traffic using the overbridge and the route via Hatch Beauchamp to access Mattock's Tree Green junction. That traffic would now route via Cold Road and Higher West Hatch Lane to access the junction.</p>	Yes
334	662	To what extent do you agree or disagree with our proposals for Village Road to be diverted via a bridge across the A358? Please let	Yes, I would hope that this would stop people using Village Road as a cut through. Although I still do not agree with the A358 road improvement scheme for all the reasons mention in my past answers!	<p>National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.</p> <p>National Highways acknowledges the general support received in relation to the design proposals to divert Village Road via a bridge.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
		us know the reasons for your response			
335	662	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	If you use option 2 or 3 it will increase the traffic using stocks lane to get to hatch Beauchamp and other neighbouring villages! These are very quiet single track roads used very frequently by horse riders and for moving livestock! and they flood.. However, option 1 would causer greater inconvenience to the inhabitants of that area as it would add a lot time to get on to the A358.	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
336	662	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	This would allow local traffic to move freely without having to use the A358.	National Highways acknowledges the general support received in relation to the design proposals.	Yes
337	662	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	The walls that you are proposing to run alongside the A358 yes may refract SOME noise but this will be pointed towards other residents!	The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of low noise surfacing, cuttings, acoustic bunds and other physical features to reduce noise impacts during operation and best practicable means including some localised noise screening and low vibration plant during construction. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed. The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).  Where noise barriers would cause noise increases at noise sensitive properties on the opposite side of the carriageway, noise barriers would include an absorptive lining to reduce reflected noise.	Yes
338	662	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	This will cause a irreversible damage to the wildlife in this area as well as the farmland!	National Highways has undertaken an extensive suite of ecological surveys to inform the Environmental Impact Assessment and identified mitigation measures required to protect wildlife during construction. National Highways has produced an Environmental Statement (Document Reference 6.2) and an Environmental Management Plan (EMP) (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities on the environment, including wildlife, would be managed. This includes species and habitat specific mitigation strategies which detail measures to be taken during both the construction and operational phases of the scheme to protect wildlife.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
339	662	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	This would be needed otherwise you would have too much traffic using village road.	National Highways acknowledges the general support received in relation to the design proposals.	Yes
340	662	To what extent do you agree or disagree with our proposals for a parallel road on the western side of the A358 to connect Broadway Street and Thickthorn Lane with Ashill junction and provide access to the A358? Please let us know the reasons for your response	No this would cause too much disruption to the residents in that area.	The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).	Yes
341	662	To what extent do you agree or disagree with our proposals for Southfields roundabout? Please let us know the reasons for your response	No this would cause too much disruption to the residents in that area.	The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).	Yes
342	662	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	Destruction of wildlife, farmland and peoples homes!	National Highways acknowledge concern over the level of environmental impact potentially arising from the scheme. The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses (including reducing impacts on air quality), whilst seeking to improve connectivity for local residents and other road users.  As part of the design development, we have adopted a mitigation hierarchy, aiming first to avoid impacts, and then to mitigate those we are unable to avoid. The mitigation measures we have adopted are described in the Environmental Statement (Document Reference 6.2).	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
343	662	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	It would be good to connect Hatch Beauchamp side to West Hatch side for cyclists and horse riders so that they can get to the Herepath safely.	<p>Taking into account consultation feedback, the design of the scheme has been modified to limit access to the Bickenhall Lane overbridge to local landowners and walking, cycling and horse-riding users only (WCH). The overbridge would be classified as a restricted byway and shared with nearby landowners for accommodation access. Traffic flow would be low, creating an attractive route for WCH.</p> <p>On the south-western side of the scheme, the restricted byway along Bickenhall Lane would have a direct connection with the Neroche Herepath. On the north-east side, there would be a direct connection to bridleway T 14/8, which would be diverted but still run alongside the scheme. These connections would provide a continuous public right of way between the Neroche Herepath, across the scheme and to either Hatch Beauchamp or Hatch Green.</p>	Yes
344	662	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	Greater consideration needs to be taken for improvements of Southfields Roundabout to cope with traffic flow. More attention to be paid to Henlade area as that's where the traffic problem occurs the rest of the A358 from Mattocks Tree Hill to Ilminster should be left alone.	<p>The scheme proposal for Southfields roundabout includes a number of improvements, including a segregated left turn lane from the A358 (North) approach, a two lane exit to the A303 (East) exit, a three lane approach from the A303 (East), a three lane approach from the A358 (West) and improved spiral markings and additional lane capacity on the circulatory. Together these measures provide a significant enhancement to the capacity at the roundabout. This is illustrated by the operational model of Southfields roundabout, which indicates that it will operate within its practical capacity in the design year (2046) even during peak hours.</p> <p>Southfields roundabout design has been further amended following consultation feedback in order to maximise road safety and further enhance capacity of the junction. These changes are an increase in the length of the parallel merge layout to the A303 eastbound from the segregated left turn lane at the roundabout, and the widening of the A358 (West) approach between Ilminster Services and the roundabout.</p> <p>The Preferred Route Announcement made in June 2019 was made taking into account public consultation feedback, and the accompanying Scheme Assessment Report (Document Reference 7.6) set out the reasons for the selection of a preferred route, including appraisal of alternatives. National Highways has progressed the scheme accordingly, and the options assessment process is set out in Chapter 3 Assessment of Alternatives of the Environmental Statement (Document Reference 6.2). Please refer to Chapter 2 of this Consultation Report (Document Reference 5.1) for further information.</p> <p>National Highways acknowledges support for the scheme excluding the section between Thornfalcon and Southfields. However, that section is required to provide a continuous high quality dual carriageway across the strategic corridor, with safe overtaking opportunities. This would improve journey time reliability, allowing for higher speeds and faster connections, and improve safety by reducing accidents, for example by reducing the number of local lanes joining the A358.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
345	662	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	Huge irreversible damage caused to several species including and not limited to: pine martins that live near Bickenhall and have been excluded from your PEI report. As well as destruction of ancient woodlands and hedgerows. We live in a world we should be protecting not destroying.	<p>The purpose of the Preliminary Environmental Information (PEI) Report was to provide a preliminary assessment of potential impacts based on available information to inform statutory consultation. It used a set of nationally accepted methodologies to assess the potential environmental implications of the scheme on the environment. Its aim was to assist stakeholders to provide their feedback during the consultation exercise.</p> <p>Since the publication of the PEI Report, National Highways has been gathering further information from ongoing surveys, landowner engagement, collaboration with statutory and non-statutory bodies, and have collated feedback into an updated baseline. This has informed an updated assessment, which is presented within the Environmental Statement (Document Reference 6.2).</p> <p>The Environmental Statement sets out where there would be positive and adverse likely effects, including any appropriate mitigation or enhancement measures. The environmental case for the scheme is set out in the Case for the Scheme (Document Reference 7.1).</p> <p>The land required for the scheme is the minimum needed to deliver the proposals, as set out in the Statement of Reasons (Document Reference 4.1).</p>	Yes
346	662	Do you have any other comments you would like to make about our proposals?	More efforts should be made to encourage people to stay on the A303 rather than increasing the rate of traffic flow to the A358.	The A303/A30 route through the Blackdown Hills will remain a possible route that can be chosen by drivers travelling to and from the South West peninsula. The case for the A358 scheme does not rely on all strategic traffic travelling along the A303 corridor to switch from the A303/A30 route through the Blackdown Hills to the new A358. The scheme will provide network resilience, particularly during the summer peak period, when the A303/A30 route can become very congested.	Yes
347	662	Do you have any other comments you would like to make about our proposals?	You have not taken into consideration the local residents enough - this is their home and their livelihood. It affects, their businesses, their mental wellbeing and their lives.	The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).	Yes
348	666	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	Noise - It is essential that the noise attenuation fencing on the proposed section between Stoke Road Bridge and Mattocks Tree Green Junction is continuous along the southern side of the carriageway to protect houses on Greenway Lane and particularly properties on Stoke Hill which are raised above the route of the road and will therefore be adversely affected by the noise from the new road if not properly attenuated. The wall should be of sufficient height ( at least 4m ) , concrete and coloured green—on its outside surface, A quiet road surface material should be used. Visual - the road and noise containment wall should be screened with trees , and all street lighting should be minimised. The width of the central reservation should be kept to a minimum to avoid unnecessary destroying of the countryside and landscape	<p>Detailed modelling of the spread of noise has been undertaken and noise mitigation in the form of bunds and noise fence barriers has been designed to reduce noise levels at noise sensitive receptors where it is effective and sustainable to do so. As part of this process the height of the noise barriers is designed to give the optimal sound reduction whilst taking other factors (e.g. visual impact) into account. The materials to be used for the noise fence barriers will not be decided until the detailed design phase but they will be specified to give a minimum required sound reduction passing through the fence or wall and the visual impact of the noise barriers will be taken into account.</p> <p>An acoustic barrier and bund combination will be provided on both sides of the proposed scheme in Lower Henlade. On the eastbound carriageway this will be between approximate chainage 1800 before Stoke Road overbridge to just past Stoke Road overbridge and on the westbound carriageway it will extend from just past the junction of Greenway Lane and Stoke Hill at approximate chainage 3350 to chainage 1980 just past Stoke Road overbridge as detailed in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2). The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3). The scheme will have a low noise surface which will also minimise noise emissions.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
349	666	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	The design of the Mattocks Tree Green Junction with the double roundabout arrangement is excessive and not required considering the traffic volumes of the roads it will serve, particularly on the southern/ western side of the junction which only serves minor routes. This part of the scheme is also close to the Blackdown Hills AONB and is on raised ground making it a very visual scar on the landscape and, unnecessarily destroying a large area of countryside . The size of this junction should be significantly reduced in scale Any lighting here will have a significant and detrimental impact for nearby residential properties as it will be so prominent, and also have a negative impact on the rural nature of the landscape. There should be no lighting at this junction	<p>Mattock's Tree Green junction and Ashill junction have been designed in accordance with the appropriate standards (DMRB CD 122) taking into account the traffic levels and need for the slip roads to provide a safe means with which to exit or enter the A358 dual carriageway at high speed.</p> <p>National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.</p> <p>Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, the specific lighting specification will be developed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.</p>	Yes
350	666	To what extent do you agree or disagree with our proposals for a new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm. Please let us know the reasons for your response	A simple T junction would be adequate to serve the Somerset Progressive School and Scout camp, rather than the roundabout proposed	<p>The proposed Mattock's Tree Green junction western dumbbell roundabout has been included into the design to accommodate the forecast volume of traffic flow expected between the A378 and the proposed A358's westbound carriageway on and off slip roads. The tie in with the new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm joins the roundabout to take advantage of a junction form already proposed.</p> <p>Since the 2021 statutory consultation, the design of this roundabout and the link road has been amended slightly. The link road has been extended to West hatch Lane to give traffic from West Hatch Lane a more direct connection to the A358, and the direct link between the roundabout and Ash Road has been removed. Ash Road will join the new link road in a priority junction to the south of the roundabout. This is to reduce the likelihood of traffic using Ash Road as a rat run between the A358 and the south of Taunton.</p>	Yes
351	666	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	Maximise screening with trees (4m both sides of the carriageway) minimise street lighting . Use a quiet road surface material. Plant embankments with wildlife compatible plants and flower . Install a noise containment wall wherever possible, which is designed to blend in with the soil/ countryside	<p>With regard to the use of trees to act as acoustic screening to minimise noise, this approach is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of vegetation required, tree planting is not generally adopted as a reliable noise mitigation measure. Other and appropriate noise mitigation measures are set out in Chapter 11 Noise and vibration of the Environmental Statement (Document Reference 6.2).</p> <p>Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, specific lighting specification will be discussed and agreed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
352	666	Do you have any other comments about our plans for Section 3: Griffin Lane to Ashill junction?	Maximise screening with trees (4m both sides of the carriageway) minimise street lighting . Use a quiet road surface material. Plant embankments with wildlife compatible plants and flower . Install a noise containment wall wherever possible, which is designed to blend in with the soil/ countryside	<p>With regard to the use of trees to act as acoustic screening to minimise noise, this approach is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of vegetation required, tree planting is not generally adopted as a reliable noise mitigation measure. Other and appropriate noise mitigation measures are set out in Chapter 11 Noise and vibration of the Environmental Statement (Document Reference 6.2).</p> <p>Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, the specific lighting specification will be developed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.</p>	Yes
353	666	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	The design unnecessarily destroys additional countryside because it does not keep the linking roads as close as possible to the dual carriageway. Standard overbridge with on/off roads leading from the dual carriageway should be considered.	<p>The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land function. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and Soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p> <p>For the A358 to become a high quality dual carriageway, junctions along its length must provide a safe means with which to exit or enter the A358 dual carriageway at high speed, complying with DMRB CD 122. As such, all of the direct local road accesses have been removed and access to Mattock's Tree Green and Ashill junctions are provided.</p>	Yes
354	666	Do you have any other comments about our plans for Section 4: Ashill junction to Southfields roundabout?	Keep width of central reservatoin to a minimum, current plan unecessary destroys additional countryside Maximise screening with trees (4m both sides of the carriageway) minimise street lighting . Use a quiet road surface material. Plant embankments with wildlife compatible plants and flower . Install a noise containment wall wherever possible, which is designed to blend in with the soil/ countryside . Height to be minimum of 4m Use quiet road surface Plant embankments and marooned land with wildlife compatible flowers and plants	<p>The scheme only uses land essential for a development of this nature, including the environmental mitigation measures. Opportunities to minimise the footprint have been explored throughout the design process. The proposals seek to reduce the impact on agricultural land through minimising the amount of agricultural land permanently required by the scheme. Agricultural land used temporarily is to be restored to a condition suitable for return to its existing land function. The assessment of effects on agricultural soils is presented within Environmental Statement Chapter 9 Geology and Soils (Document Reference 6.2). The assessment of effects on agricultural land holdings is presented within Environmental Statement Chapter 12 Population and human health (Document Reference 6.2).</p> <p>With regard to the use of trees to act as acoustic screening to minimise noise, this approach is generally not effective in providing substantive, consistent noise mitigation. In general, to achieve useful mitigation, dense foliage of at least 10m depth and consistent for the full height of the vegetation would be required. Given the seasonal nature of leaf cover for trees and the density of vegetation required, tree planting is not generally adopted as a reliable noise mitigation measure. Other and appropriate noise mitigation measures are set out in Chapter 11 Noise and vibration of the Environmental Statement (Document Reference 6.2).</p> <p>Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, the specific lighting specification will be developed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.</p>	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
355	669	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	It will effect and destroy the lives of all the people living in the local villages.	The need for the scheme is established and set out in the Case for the Scheme (Document Reference 7.1). The proposals seek to address traffic congestion and safety issues that currently impact on local people and businesses, whilst seeking to improve connectivity for local residents and other road users. The beneficial and adverse effects of the scheme during construction and operation on the local community and businesses are reported in Environmental Statement Chapter 12 Population and human health (Document Reference 6.2). In conclusion,	Yes
356	669	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	It is a totally waste of money for a road that never needs to be built.	<p>The South West's economy is under-performing compared to the UK average. Local councils and business leaders agree that upgrading the rest of the A303/A358 corridor to dual carriageway would help connect the South West better to neighbouring regions, unlocking its potential for growth and supporting plans for more homes and jobs.</p> <p>National Highways assess the costs and benefits of the scheme using a number of different assessments to understand impacts including journey time savings to road users, road safety, wider economic impacts, and a range of environmental aspects. The project is reviewed by both National Highways and the Department for Transport to examine whether the benefits outweigh the costs, and whether the business case for the scheme is sufficient strong to support delivery. This is reviewed at every stage of work to determine whether the scheme delivery should be continued; the scheme has already gone through a strategic outline business case, and the preliminary design stage sets out the outline business case (a more detailed version). A full business case will be prepared during construction preparation if the Development Consent Order is granted.</p> <p>The proposed scheme is part of the Government's Second Road Investment Strategy (RIS2), which identifies parts of the strategic road network that need upgrading to improve safety, connectivity, and reliability for its users. Details of the economic appraisal of the scheme, which forms the basis for the value for money assessment, are provided in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p> <p>Details of the Benefit-to-Cost ratio (BCR) and the scheme costs are given in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
357	669	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	It will destroy large swathes of our lovely Somerset countryside and turn us into an urbanised area.	National Highways recognises the significance and sensitivity of the landscape. Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2) assesses the impact of the scheme on local landscape and visual receptors. Where it is possible to do so for a development of this nature, mitigation measures have been implemented to avoid or minimise impacts and retain local character and visual amenity.	Yes
358	669	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	What has been done so far is a total waste of money and a lot of people are afraid to use the Nexus roundabout and are having to drive miles extra to avoid it.	The proposed design change to have the Nexus 25 junction as a signalised junction would better accommodate a crossing of the A358 for walkers and cyclists. The proposed signalised crossing would provide adequate capacity for the predicted traffic flows and allow more control over traffic movements by linking the operation of the signals to those at the M5 junction 25 roundabout and Taunton Gateway Park and Ride. The signalised crossing is incorporated into the timings and has no significant effect on the time given to vehicle traffic.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
359	669	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	Because the lack of junctions on the new road people are going to be forced to drive around the lanes causing extra miles and time on their journeys and causing an issue for walkers, horse riders and animals. It will be a nightmare as the lanes will become so very busy.	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the detailed design of the local roads mitigation will continue into the next design stage.</p> <p>Proposals for walkers, cyclists and horse-riders and improved connections as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (Environmental Statement Appendix 2.1 Annex F, Document Reference 6.4).</p>	Yes
360	669	To what extent do you agree or disagree with our proposals for a new bridge at Bickenhall Lane to provide access for vehicles, walkers, cyclists, horse riders and disabled users? Please let us know the reasons for your response	Because again the same as above. It will totally turn the village into a rat run and destroy the lives of the villagers	<p>By improving congestion and reliability, the scheme aims to reduce the likelihood of drivers choosing alternative routes through neighbouring communities and make it easier for drivers, walkers, cyclists and other local road users to get around.</p> <p>National Highways has undertaken traffic modelling of the A358 and surrounding area to understand the changes in traffic flows. The results are reported in the Combined Modelling and Appraisal Report (ComMA) (Document Reference 7.4) and shows that there will be slight or negligible changes on most local roads, although with some seeing very significant benefits as a result of reductions in vehicles using alternative routes to the A358 between Taunton and Ilminster.</p> <p>Where there would be increases in traffic on local roads, National Highways has agreed an approach with Somerset Council, the highway authority for these roads, to assess the forecast traffic impacts and determine whether mitigation is required. As part of the scheme, mitigation measures are proposed to help ensure that the increases in traffic do not have a detrimental impact on aspects such as traffic congestion or road safety on the local road network. Engagement with Somerset Council on the detailed design of the local roads mitigation will continue into the next design stage.</p>	Yes
361	669	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	All options pathetic and have you driven down Stock Lane which can rise to 4ft deep	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences Of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
362	669	To what extent do you agree or disagree with our proposals between Capland and Ashill on the western side of the A358? Please let us know the reasons for your response	How much longer will it take for emergency vehicles to reach our properties if any of these stupid proposals go ahead.	<p>National Highways have undertaken traffic modelling of the A358 and surrounding area to understand the changes in routeing. Most villages in the vicinity of the A358 will see little change in their routes to the east and west. Bridges and underpasses are provided or retained to allow local connectivity across the A358 once it is upgraded to a high quality dual carriageway. It is acknowledged that some of these routes are longer than the existing routes that cross the A358, however these routes are safer than those currently available due to entirely avoiding the need to interact with traffic on the A358.</p> <p>Checks on journey times between local villages and both the M5 junction 25 and Southfields roundabout have been carried out using the traffic modelling. These show that generally there are reductions in overall journey times due to the much faster speed of the scheme, although some trips have slightly longer journey times. Journey time reliability is improved with the scheme due to the road being safer and there being safe opportunities to overtake slower vehicles.</p> <p>The methodology and results of the traffic modelling is reported in the Combined Modelling and Appraisal Report (Document Reference 7.4).</p>	Yes
363	669	To what extent do you agree or disagree with our proposals for the Ashill junction? Please let us know the reasons for your response	Blight on the landscape Total devastation and destruction of our beautiful countryside turning us into an urbanised area. Unless you put right Southfields roundabout and dual the A303 to Exeter when the road is blocked, which it is frequently, all they will have created is a four lane traffic jam, which the locals will now be caught up in. At the present we can always find a way round to get round. Also how are they going get emergency vehicles through the four way traffic jam without any side roads. The answer to the A303 is a viaduct across the valley at Marsh which could be made a thing of beauty as all other viaducts are.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
364	669	To what extent do you agree or disagree with our proposals for a parallel road on the eastern side of the A358 to connect Stewley with the Ashill junction and provide access to the A358? Please let us know the reasons for your response	All as above But taking up more of our precious farmland at a time when half the world is starving.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
365	669	To what extent do you agree or disagree with our proposals for walkers, cyclists, horse riders and disabled users, including our plans to make use of the local road network and new off-road routes to create a cycle route from Henlade to Southfields roundabout? Please let us know the reasons for your response	Leave it as it is	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
366	669	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	Why should the local people have to suffer this debacle just to shave a few minutes of time off the journey of people who travel the road occasionally.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
367	669	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	It will destroy our lives during it construction and then after it is built.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
368	669	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	Basically it a total waste of money for a road that doesn't need to be built and a destruction of our countryside.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
369	669	Please let us know if you have any comments on the information presented in the Preliminary Environmental Information (PEI) Report	As above and as it is going to be a fast road I understand that fast cars use more fuel so how does that help our environment The locals are forced to add several miles to their journeys every time they venture out.	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes
370	669	Do you have any other comments you would like to make about our proposals?	Redacted response - strong expression of objection to the proposals	National Highways acknowledges the range of views expressed relating to the need for the scheme and those responses received which object to the scheme going ahead in principle.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
371	672	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Bridge is essential!	National Highways welcomes support for the scheme	Yes
372	672	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	Essential access to A378	National Highways welcomes support for the scheme	Yes
373	672	To what extent do you agree or disagree with our proposals for a new connection linking Village Road to the Mattock's Tree Green junction to provide access to Hatch Beauchamp for residents and local businesses? Please let us know the reasons for your response	This road could join the new roundabout direct rather than at a junction with A378?	The scheme has since been improved and would provide an improved arrangement with the T-junction removed and Village Road link (north) realigned to join the roundabout directly.	Yes
374	672	Please let us know the reasons for your response to the question At Capland, which option would you prefer to provide a connection between local villages in this area?	No opinions on this as I do not use these roads.	National Highways acknowledges this comment	Yes
375	672	Please let us know if you have any comments on our proposals for construction, including the proposed phasing	Henlade bypass is urgently needed, so prioritise route between M5 and Mattocks Tree Green junction (A378).	The scheme includes a bypass of the existing A358 passing through Henlade and this will improve the congestion and air quality issues currently experienced in the village.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
376	673	To what extent do you agree or disagree with our proposals to upgrade M5 junction 25 and the Nexus roundabout? Please let us know the reasons for your response	The road requires updating and following existing road seems better option, but with comments taken into consideration in points 1b, 1c, 2a, 2b, 2c and 2d.	National Highways acknowledges this comment and welcomes support for the scheme	Yes
377	673	To what extent do you agree or disagree with our proposals for a new bridge over the A358 at Stoke Road? Please let us know the reasons for your response	Access It appears to be only access to our property from old A358 (existing road), to Presidents Court At Stoke Hill so we have to agree.	National Highways welcomes support for the scheme.	Yes
378	673	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	The new road would be close to properties all along this section, so noise reduction features would need to be in place everywhere including fences/hedges/noise reduction road surfaces. It is essential that noise reduction fencing is used all along the southern side of the route to reduce noise to residential properties along Greenway Lane and Stoke Hill.	The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of low noise surfacing, cuttings, acoustic bunds and other physical features to reduce noise impacts during operation and best practicable means including some localised noise screening and low vibration plant during construction. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed. The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).	Yes
379	673	Do you have any other comments about our plans for Section 1: M5 junction 25 to Mattock's Tree Green junction?	How do we access the proposed new road from Illminster direction, if coming from our property at Presidents Court. Would like to see spur off of new road to access Greenway Lane (for residents only).	Access to the proposed new road from Presidents Court will be via the existing A358 at either Nexus Junction or Mattocks Tree Green Junction. Greenway Lane will not be connected to the A358 and so access to the existing A358 will be via Stoke Road.	Yes
380	673	To what extent do you agree or disagree with our proposals for Mattock's Tree Green junction, including the connections to local roads such as to Henlade via the existing A358, the A378 Langport Road and Ash Road? Please let us know the reasons for your response	The Mattocks Green junction proposal appears to be an overkill of roundabouts for such small connecting roads. The junction at Ashill seems a better solution, could this option be adopted at Mattocks Tree Junction Instead of current proposal? Or just a simple T-junction here to serve the Progressive School and Scout Camp.	The proposed Mattock's Tree Green junction western dumbbell roundabout has been included into the design to accommodate the forecast volume of traffic flow expected between the A378 and the proposed A358's westbound carriageway on and off slip roads. The tie in with the new connection to provide access for the Somerset Progressive School, the Huish Woods Scout Campsite and local businesses at Nightingale Farm joins the roundabout to take advantage of a junction form already proposed.  Since the 2021 statutory consultation, the design of this roundabout and the link road has been amended slightly. The link road has been extended to West hatch Lane to give traffic from West Hatch Lane a more direct connection to the A358, and the direct link between the roundabout and Ash Road has been removed. Ash Road will join the new link road in a priority junction to the south of the roundabout. This is to reduce the likelihood of traffic using Ash Road as a rat run between the A358 and the south of Taunton.	Yes

Row ID	PIL ID	Survey question (if relevant)	Matters raised in response to statutory consultation. Matters copied verbatim	Regard had to response under Section 49 of the Act	Matter relevant to a design change? (Yes, No or N/A)
381	673	Do you have any other comments about our plans for Section 2: Mattock's Tree Green junction to Griffin Lane? Please let us know the reasons for your response	This section of the scheme runs very close to Blackdown Hills and Henlade Woods both areas of AONB, therefore we would like to see this part of the scheme have minimal impact on the environment and surrounding area. Please DO NOT put an expensive and light polluting set of roundabouts at this junction when a simpler solution could be found to service small under used facilities.	Lighting will be limited to the Nexus 25 junction and Southfields roundabout. The mainline carriageway, including the two new junctions at Mattock's Tree Green and Ashill will not be lit. The provision of lighting on other local roads is not expected to be required except for some limited locations at the tie-in of the new road alignment with existing local roads, or where existing lit local roads are realigned. Further details of the approach to lighting is provided within Environmental Statement Chapter 2 The project (Document Reference 6.2). An assessment of the impact of lighting on the landscape is provided in Environmental Statement Chapter 7 Landscape and visual effects (Document Reference 6.2). Should the application be approved, specific lighting specification will be discussed and agreed at the detailed design stage. The intention is to minimise any potential light spillage into the landscape.	Yes
382	673	At Capland, which option would you prefer to provide a connection between local villages in this area?	Option 2 – Retain the existing route via Stewley Lane and Stock's Lane and provide localised flood improvements	Taking into account consultation feedback, the scheme now includes a connecting link road between Capland Lane and Village Road, which was referred to as Option 1 during statutory consultation. The link would be adopted highway and accommodate all users including walkers, cyclists, horse-riders and carriage drivers. It would also provide access to local villages during incidences of flooding, which have temporarily closed Stocks Lane in two locations in the past.	Yes
383	673	Do you have any other comments you would like to make about our proposals?	If the scheme is to proceed, please consider impact of noise and light pollution to local residents of this new road. We request that adequate access to footpaths and walking routes are given and that noise reducing road surfaces are used for construction purposes.	<p>The effects of the scheme in relation to noise (during both construction and operation) have been assessed. This is reported in Environmental Statement Chapter 11 Noise and vibration (Document Reference 6.2), which also sets out the measures that National Highways proposes to mitigate adverse noise effects. For example, where residents would be impacted by noise as a result of the scheme, the design includes the use of low noise surfacing, cuttings, acoustic bunds and other physical features to reduce noise impacts during operation and best practicable means including some localised noise screening and low vibration plant during construction. National Highways has also produced an Environmental Management Plan (Document Reference 6.4, Appendix 2.1), which explains how the impact of construction activities will be managed. The location of acoustic bunds and barriers are shown on Environmental Statement Figure 7.8 Environmental Masterplan (Document Reference 6.3).</p> <p>Public rights of way would be retained as much as possible and the scheme includes new off-road routes and new crossings. Some diversions and stopping up would be inevitable but users would no longer be trying to cross the A358 at grade, making the public rights of way network safer and more inclusive. Proposals for walking, cycling and horse-riding (WCH) as part of the scheme are detailed in the Rights of Way and Access Plans (Document Reference 2.4), which is complemented by the Public Rights of Way Management Plan (Environmental Statement Appendix 2.1 Annex F, Document Reference 6.4).</p>	Yes
